#7 – Postgresql & Prisma

What is PostgreSQL ?

PostgreSQL is an free open-source database system that support both relational (SQL) and non-relational (JSON) queries

PostgreSQL is a back-end database for dynamic websites and web applications

Data is combination letters that represents a fact - Josse

Data

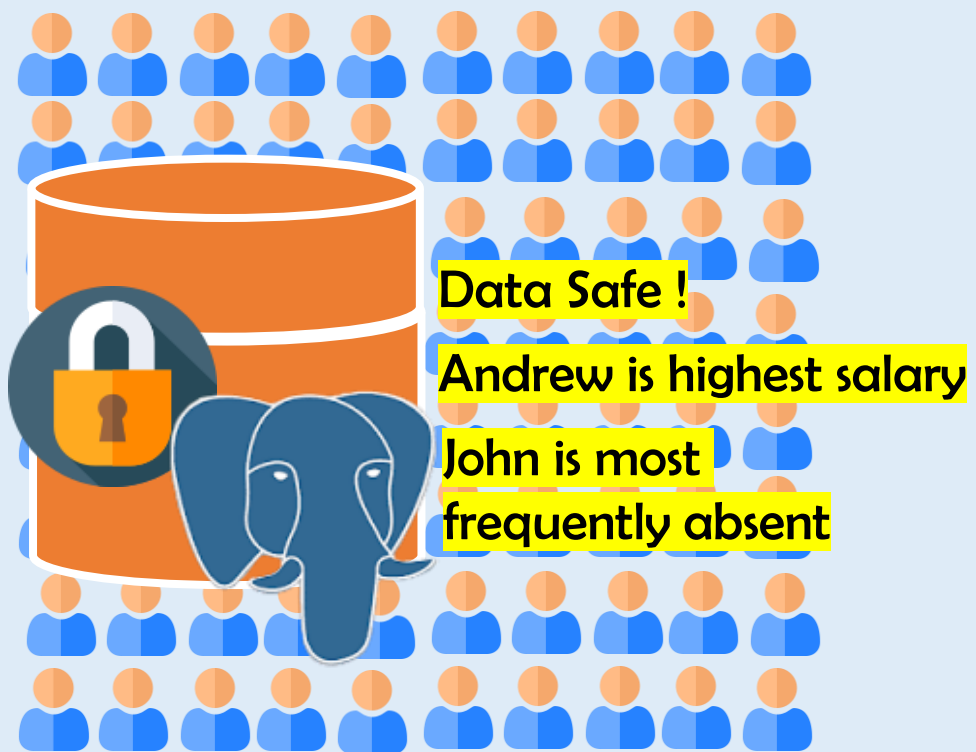

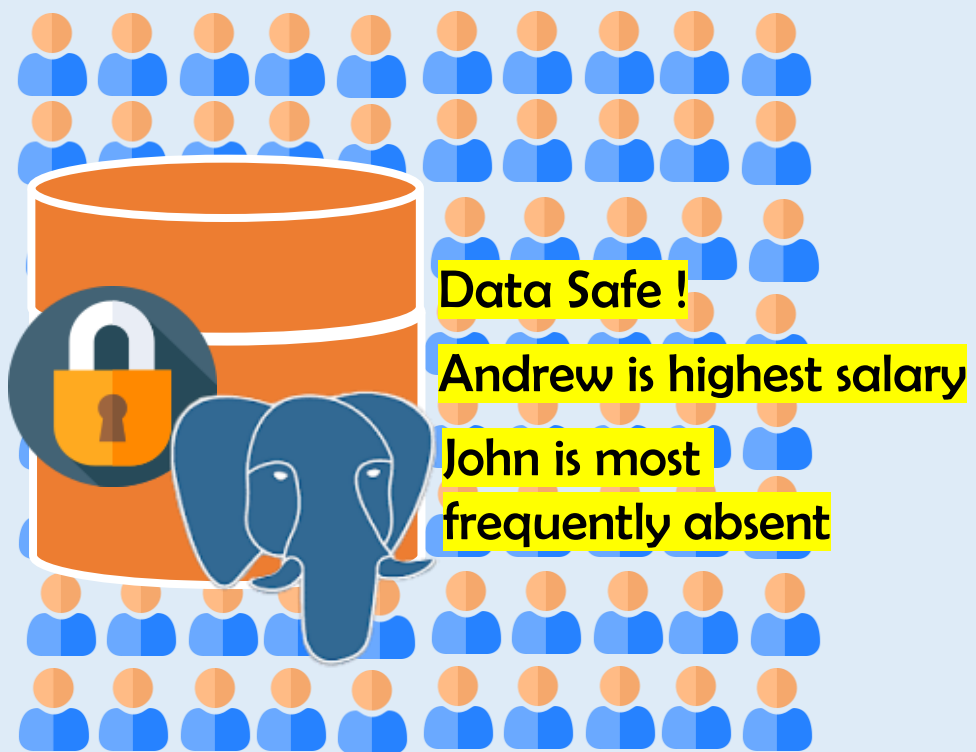

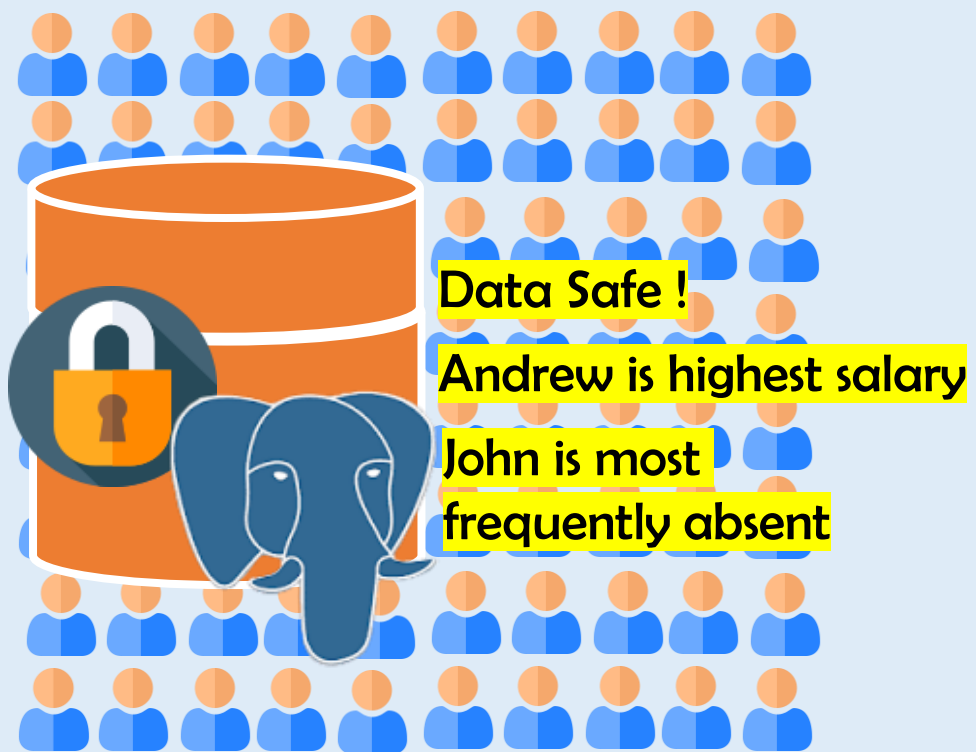

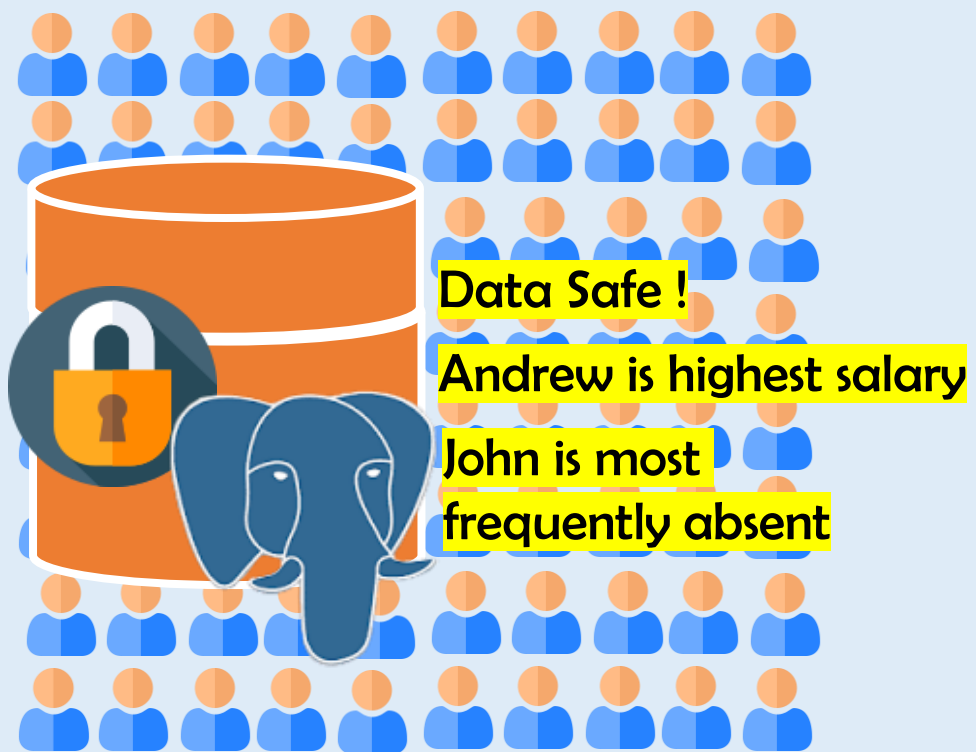

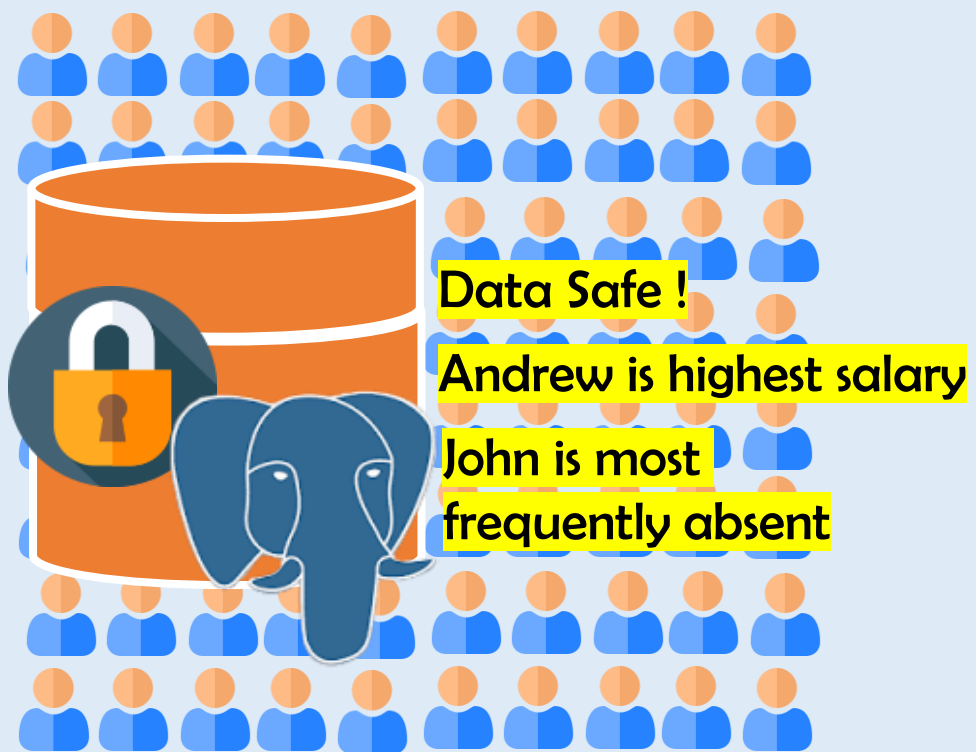

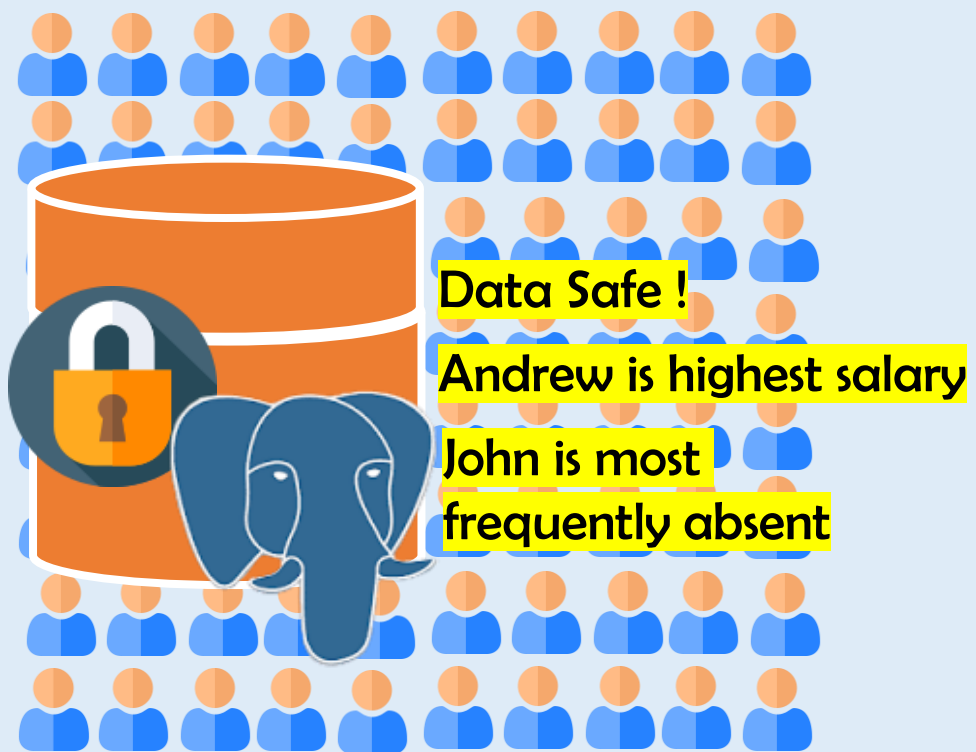

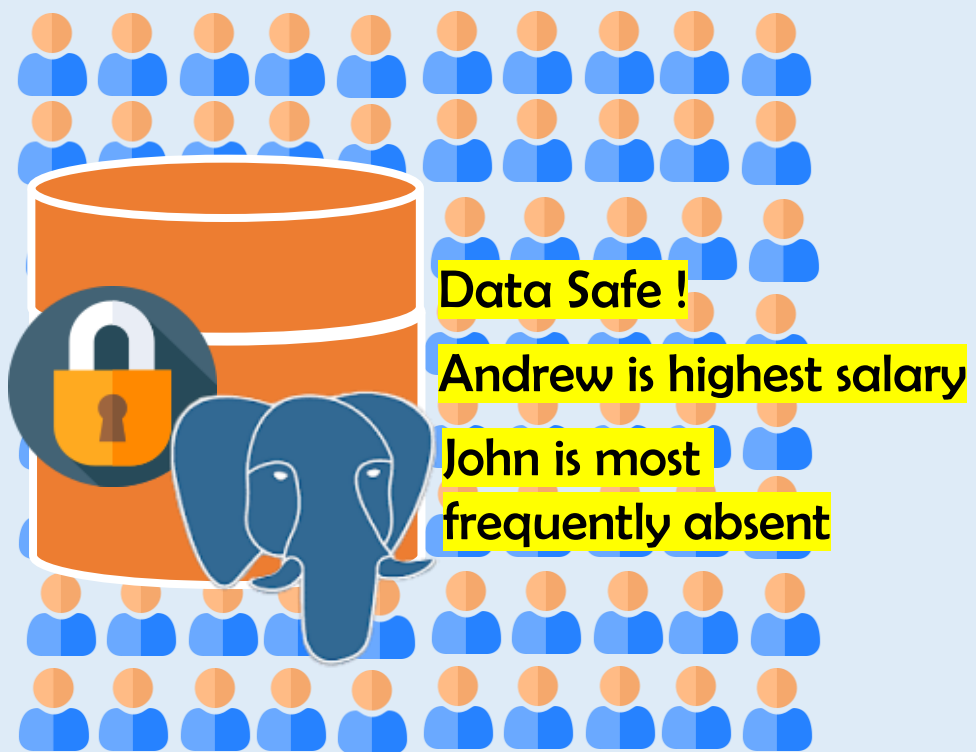

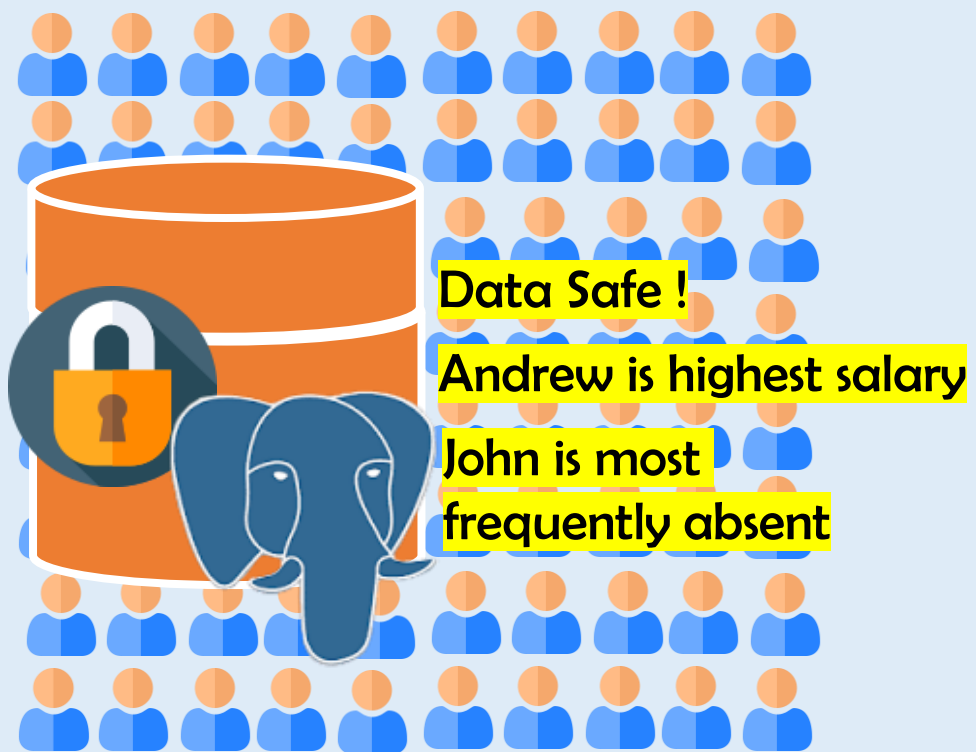

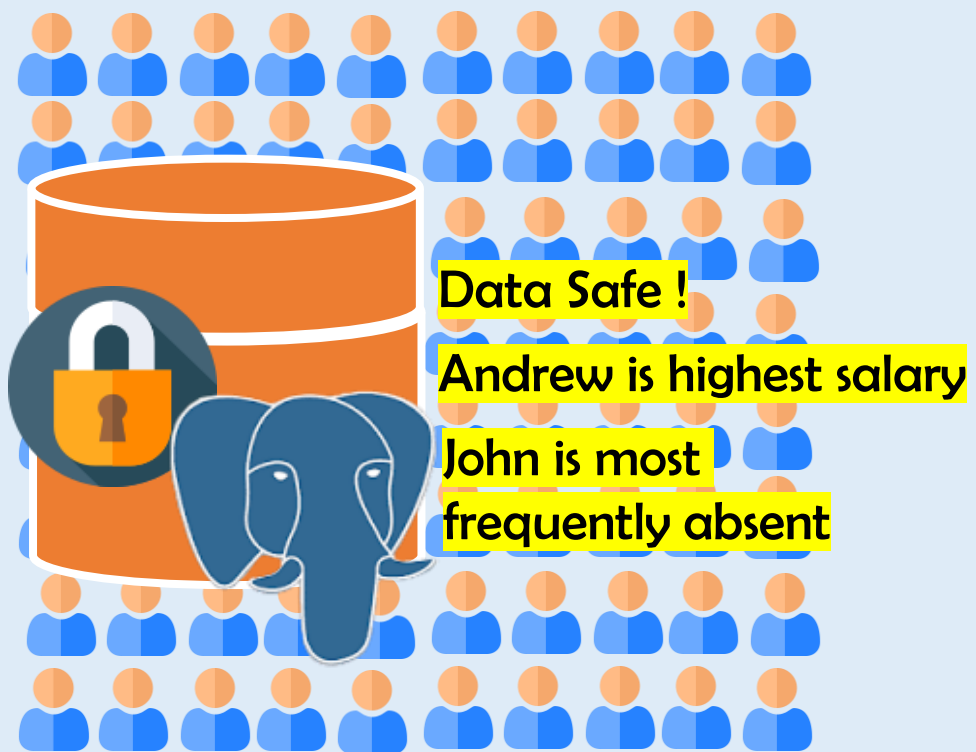

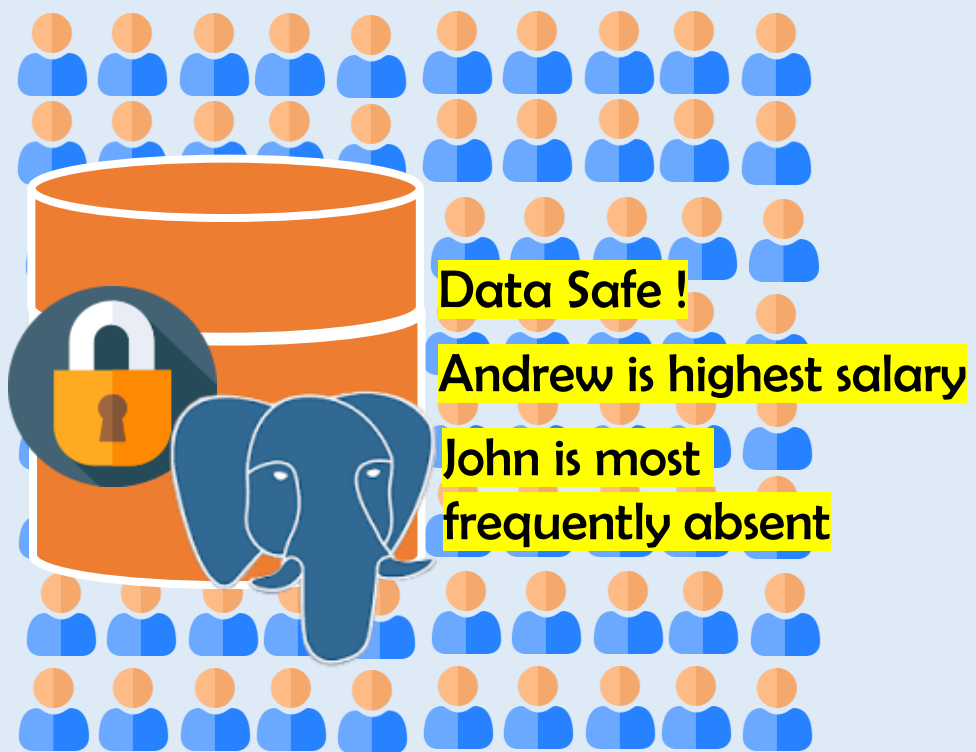

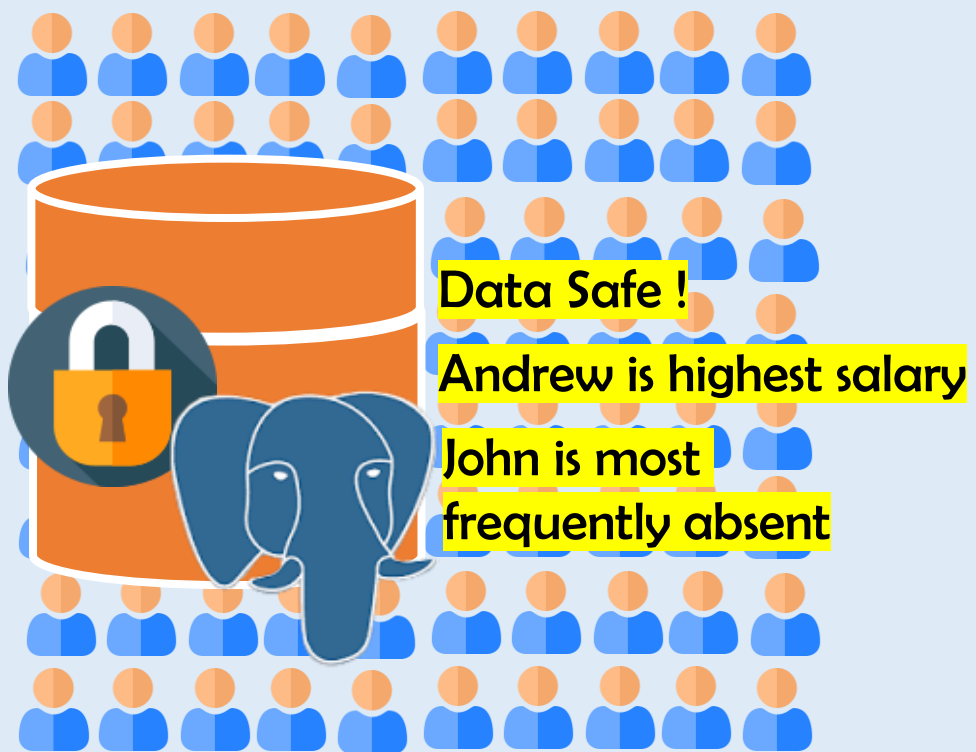

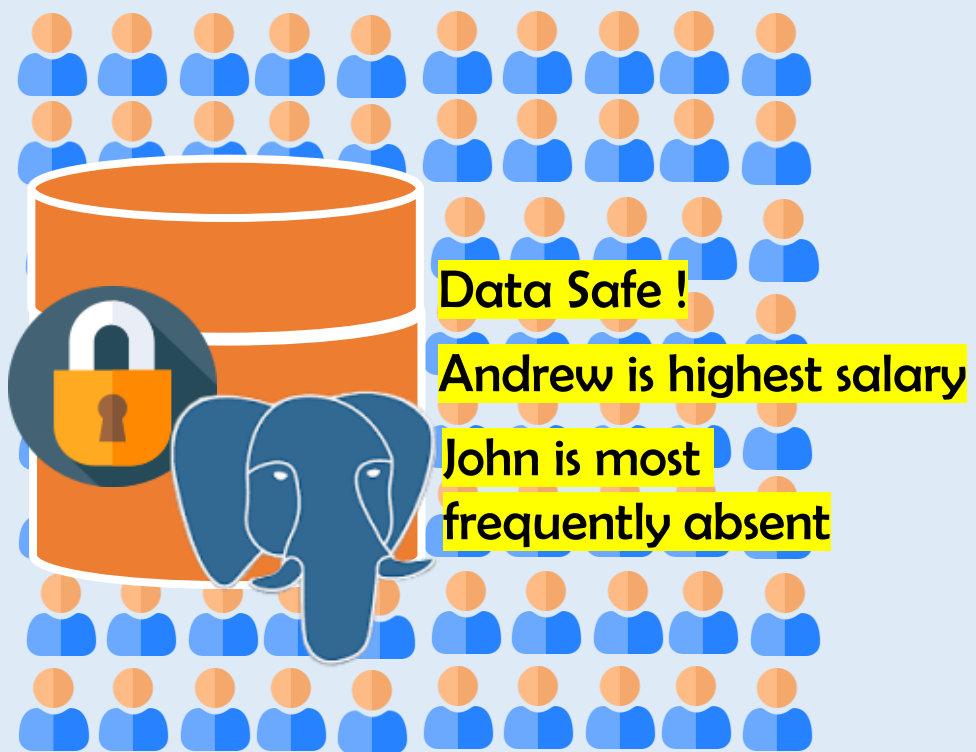

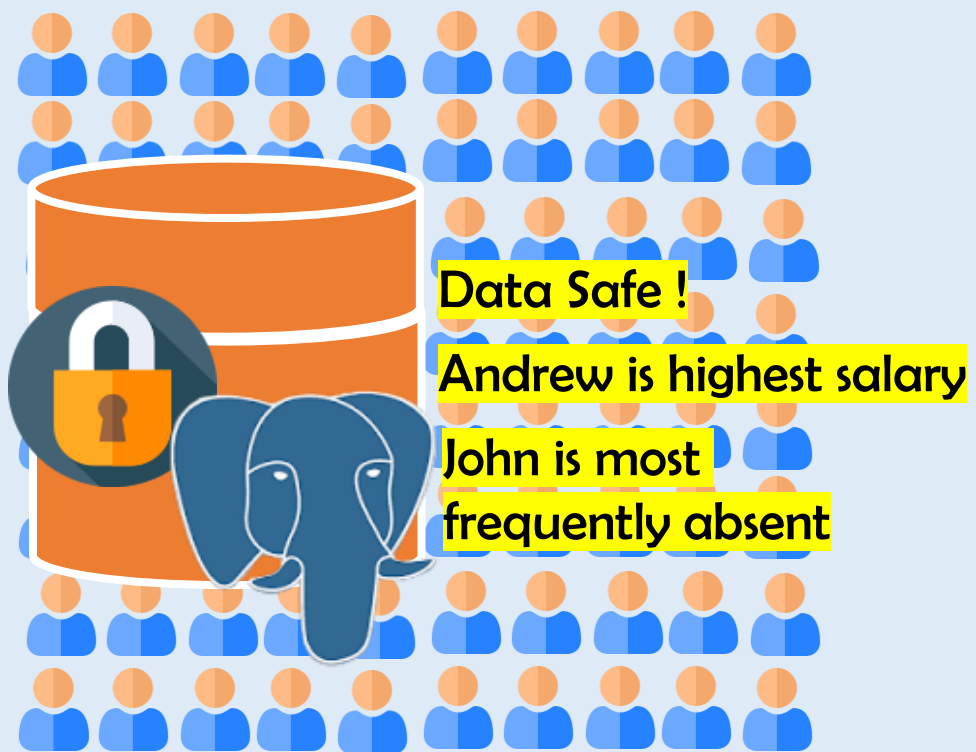

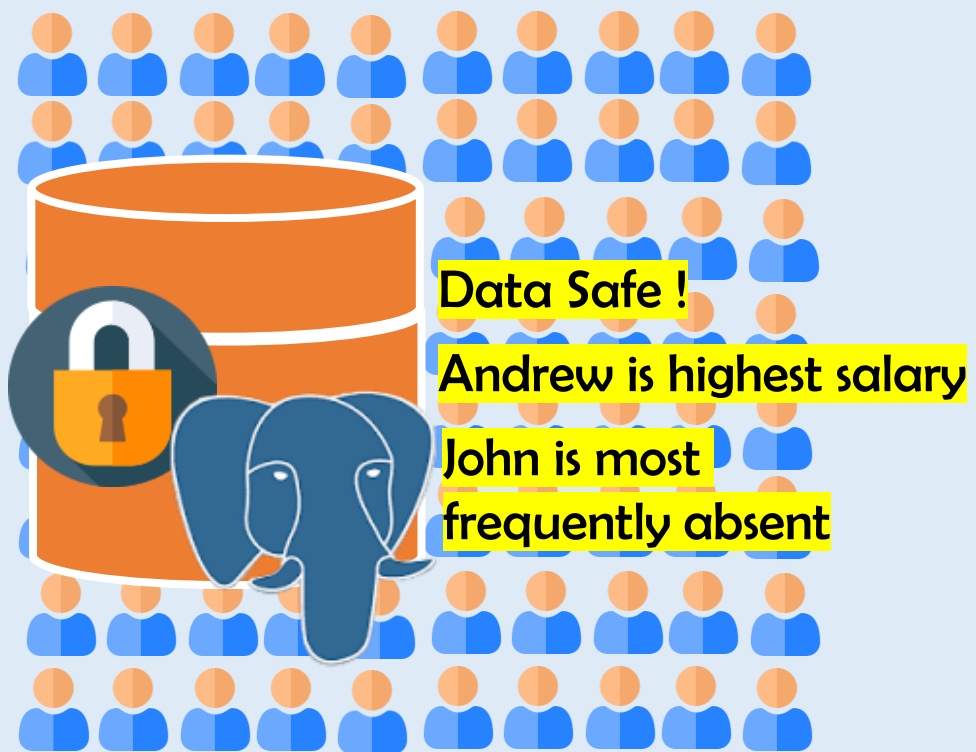

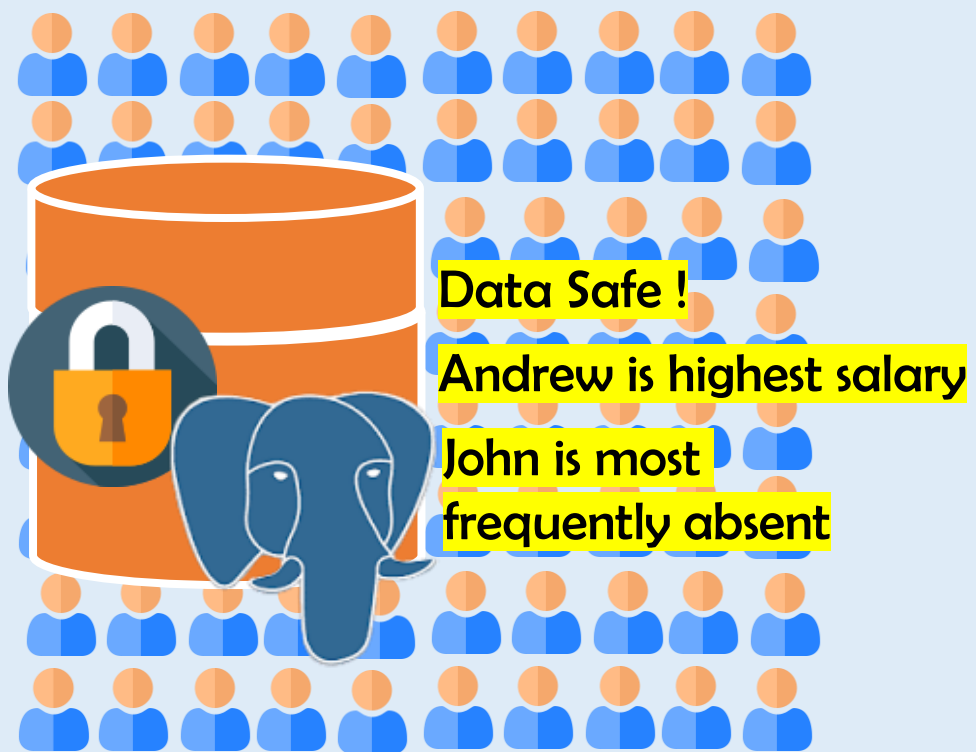

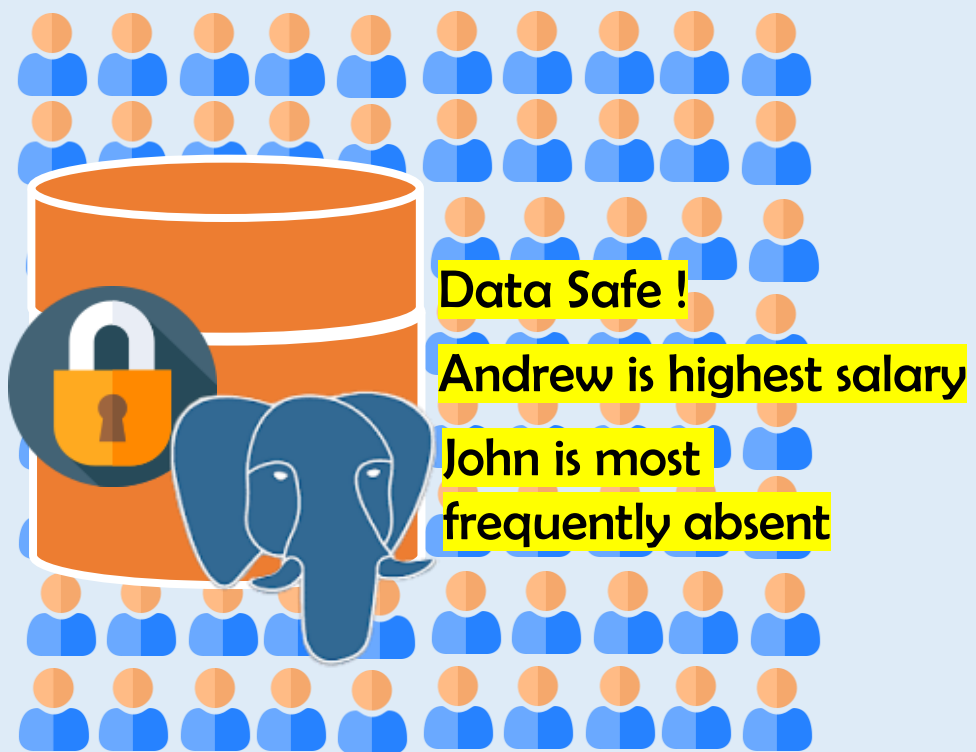

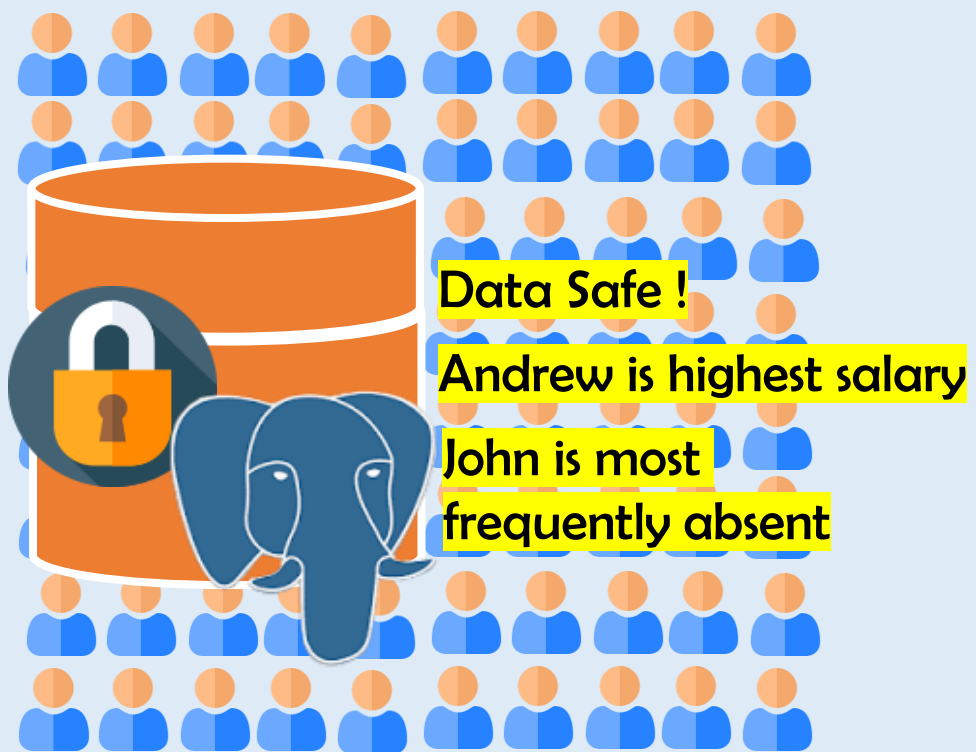

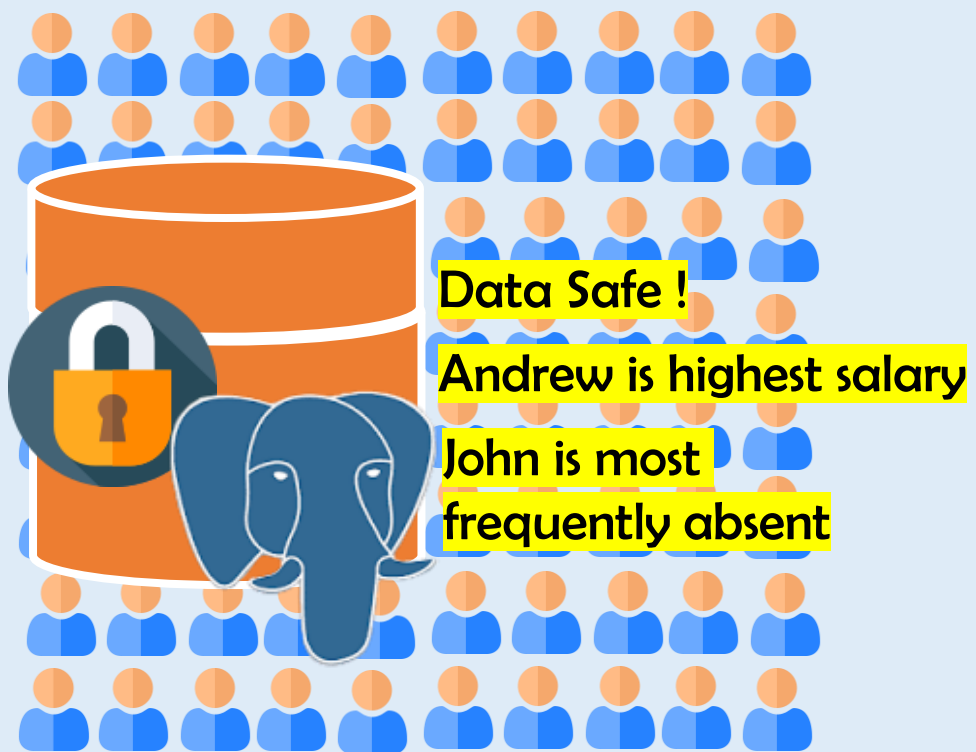

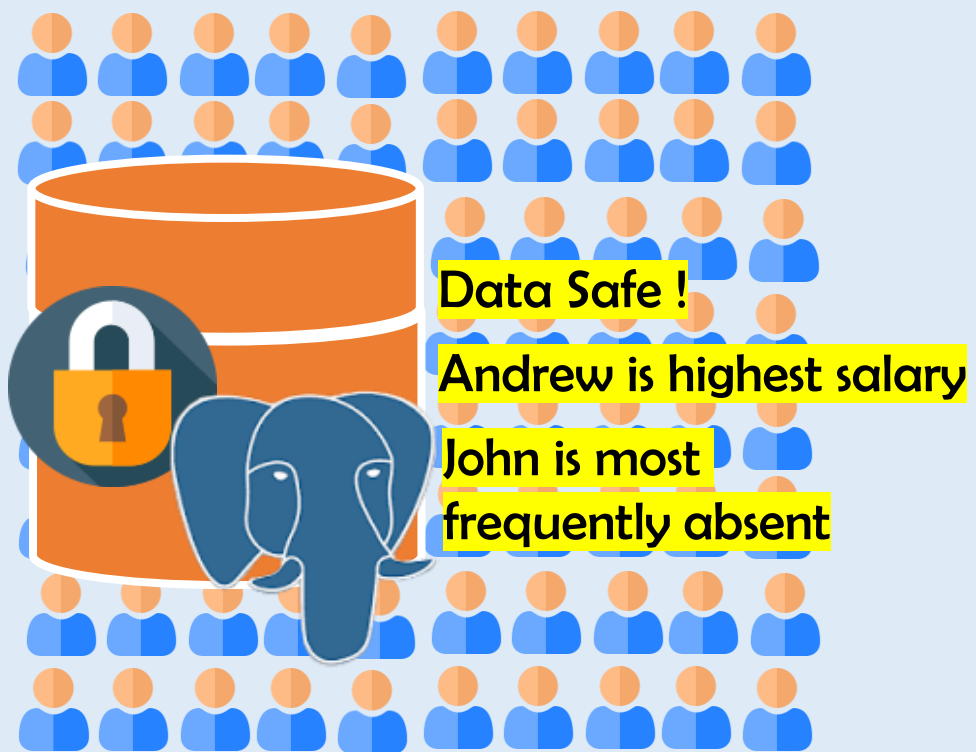

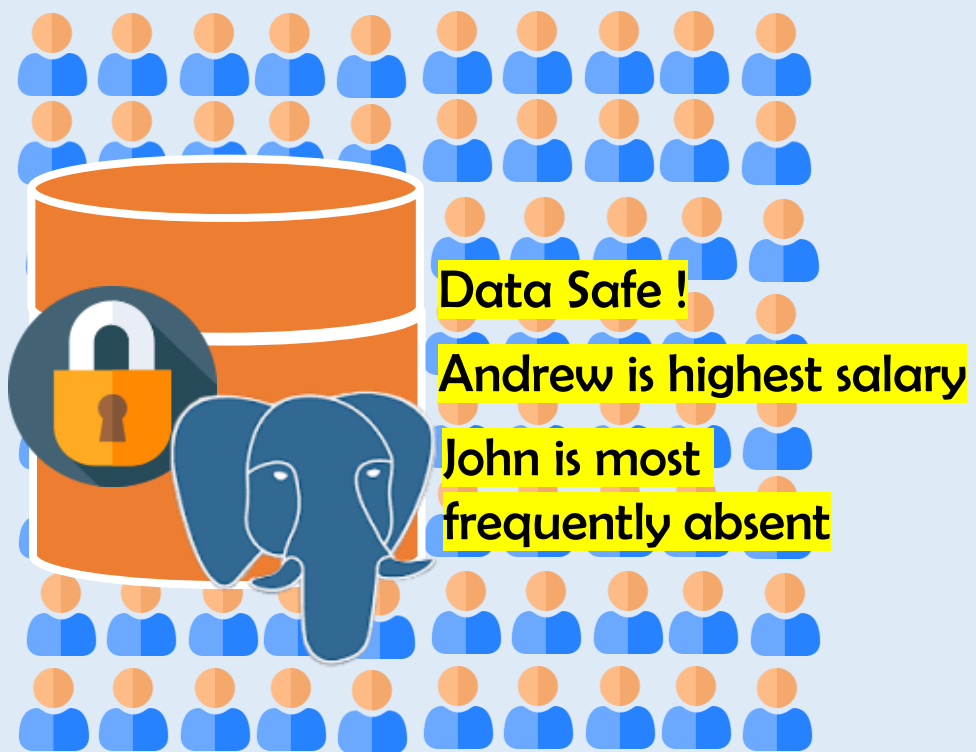

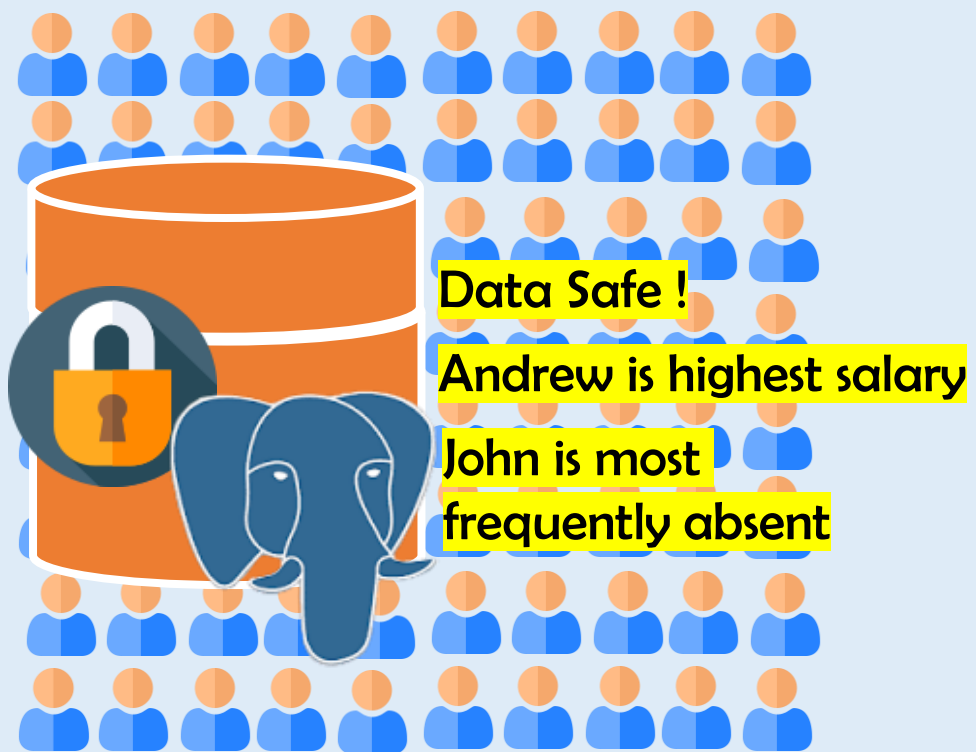

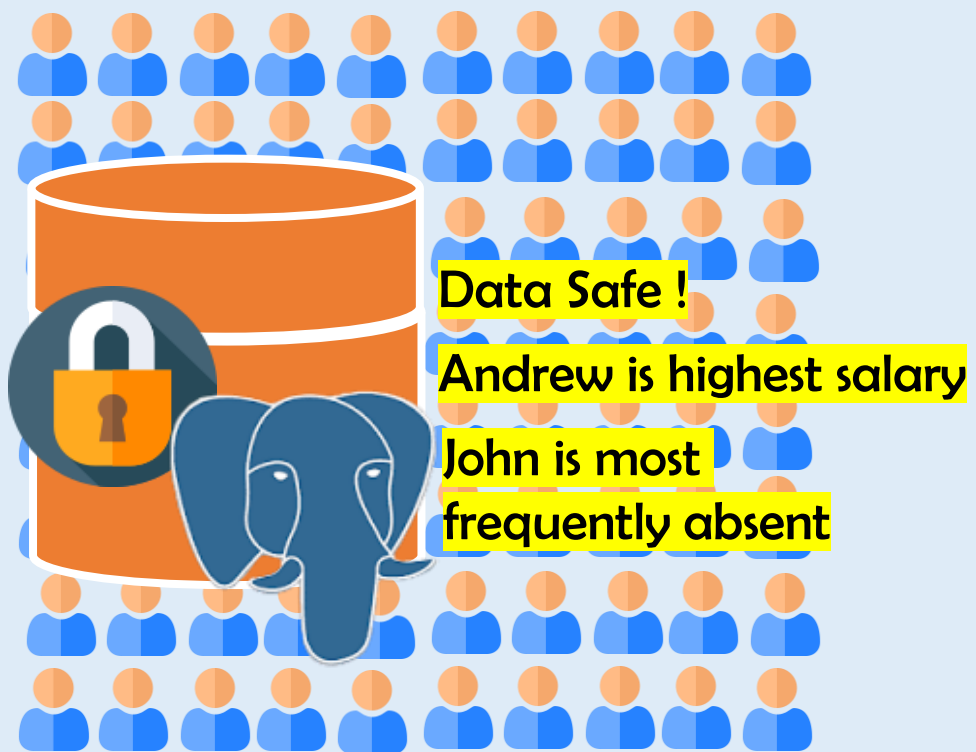

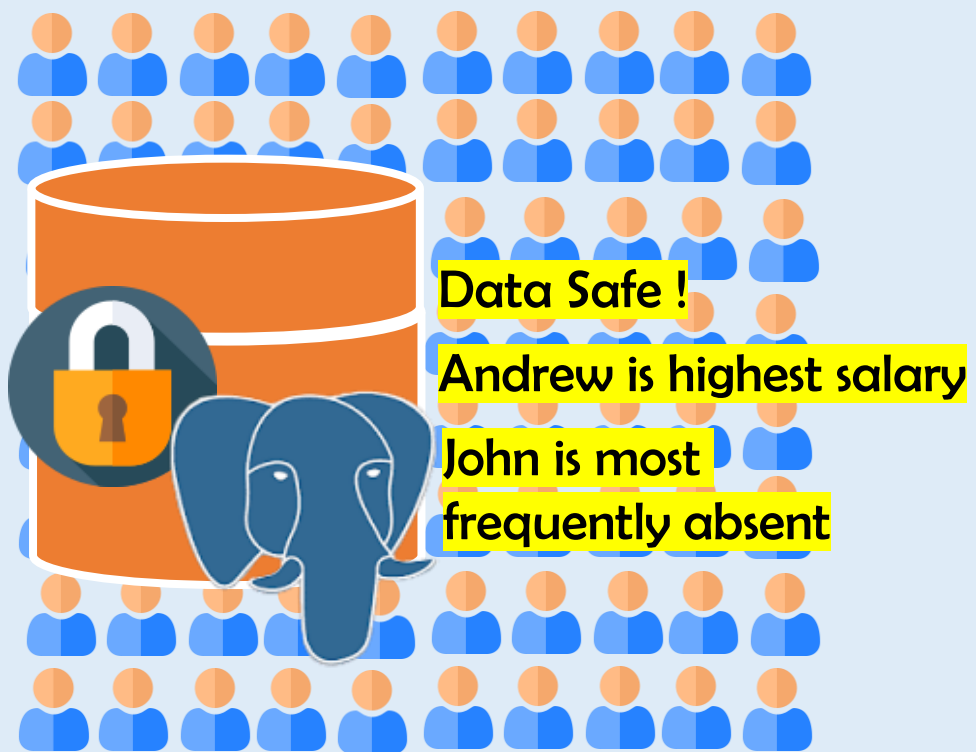

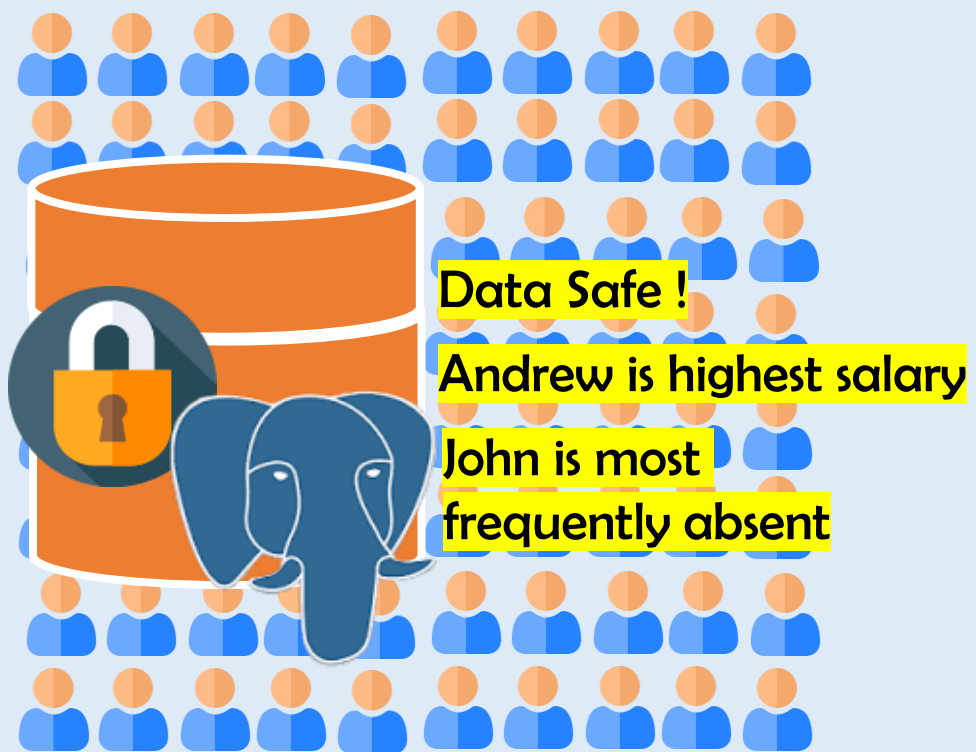

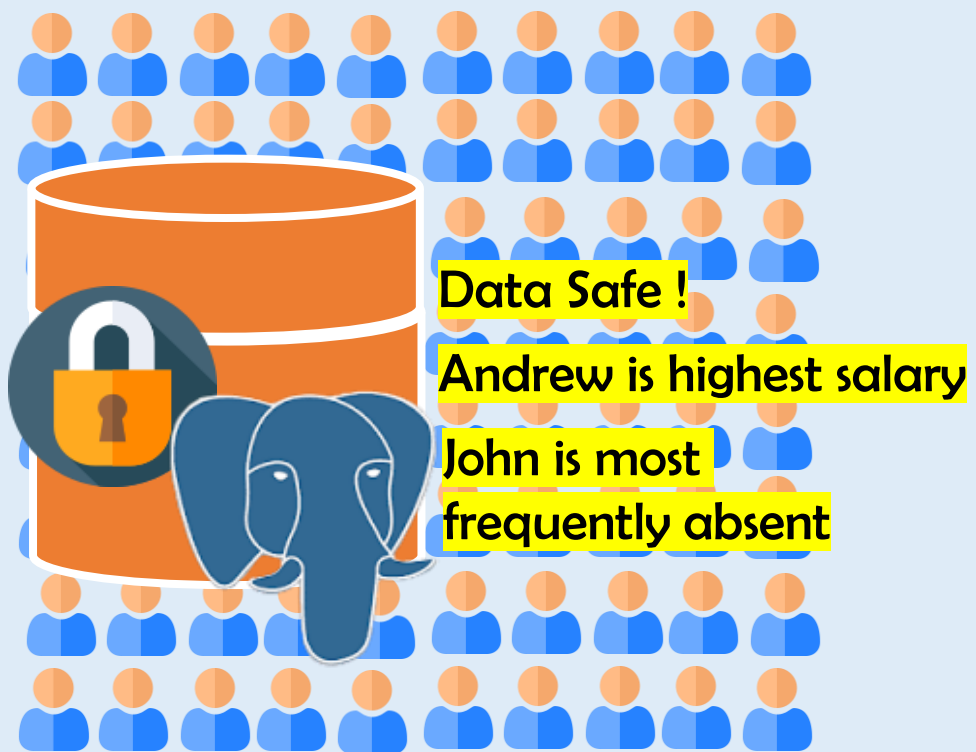

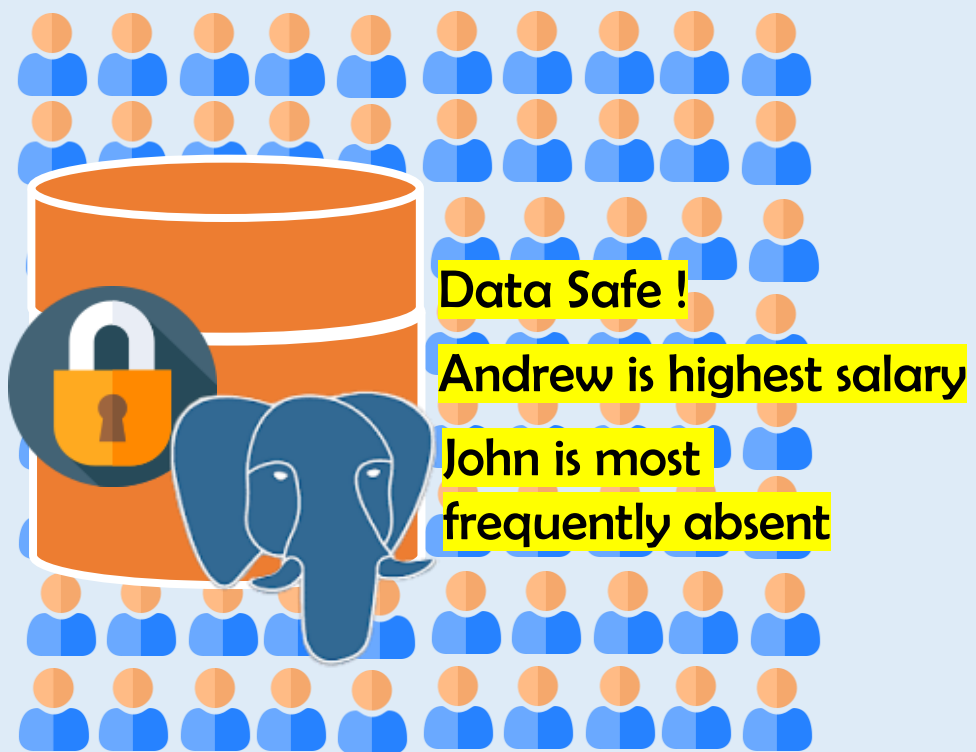

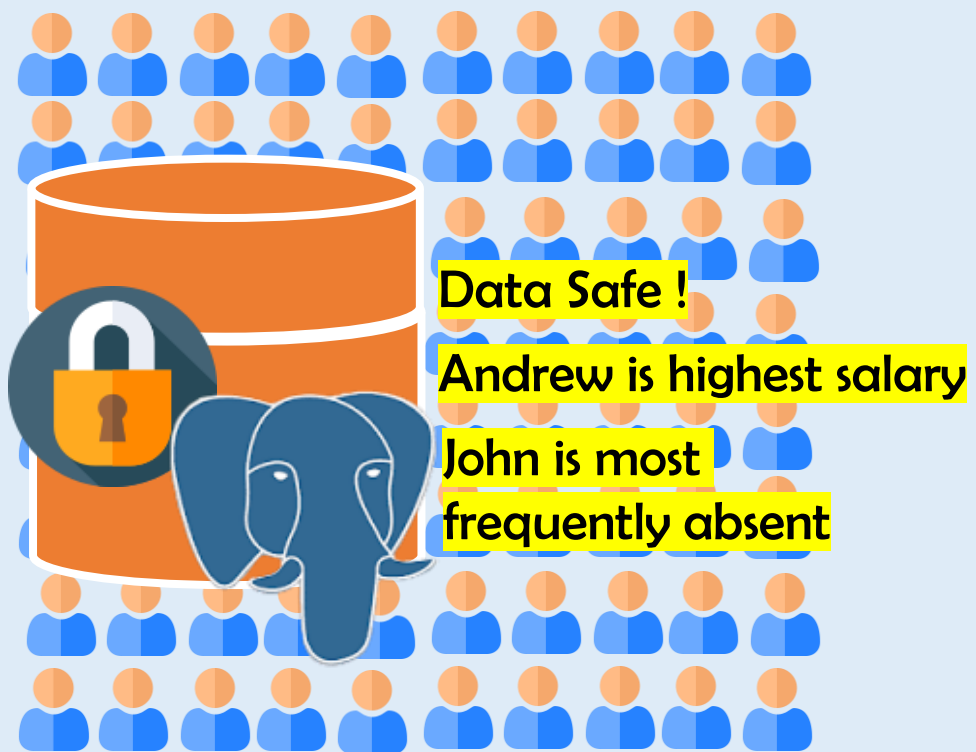

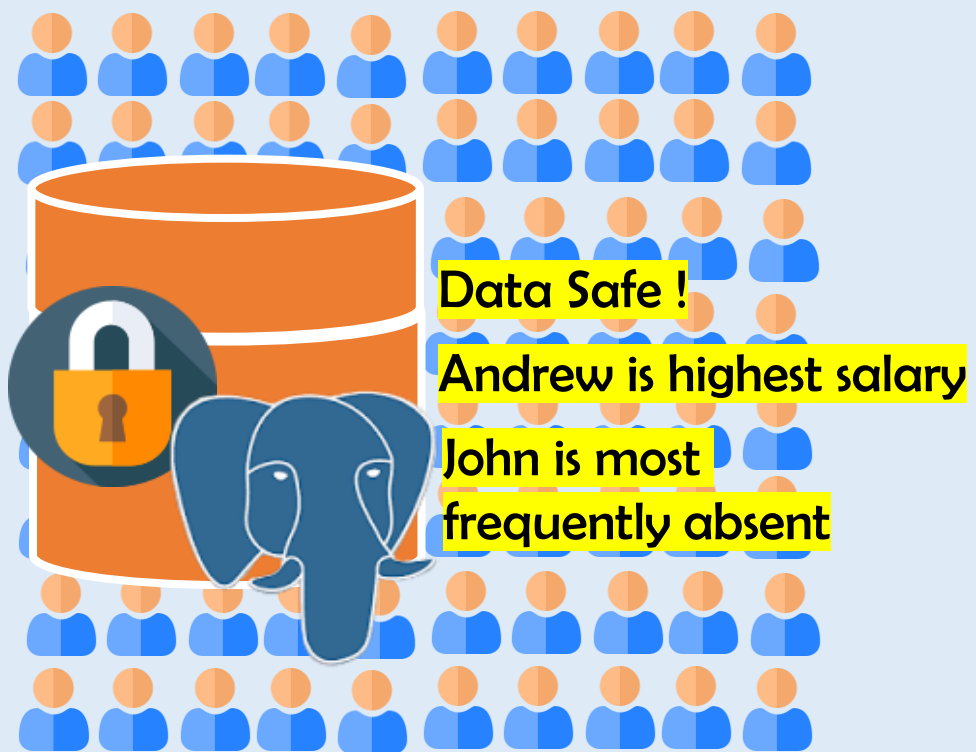

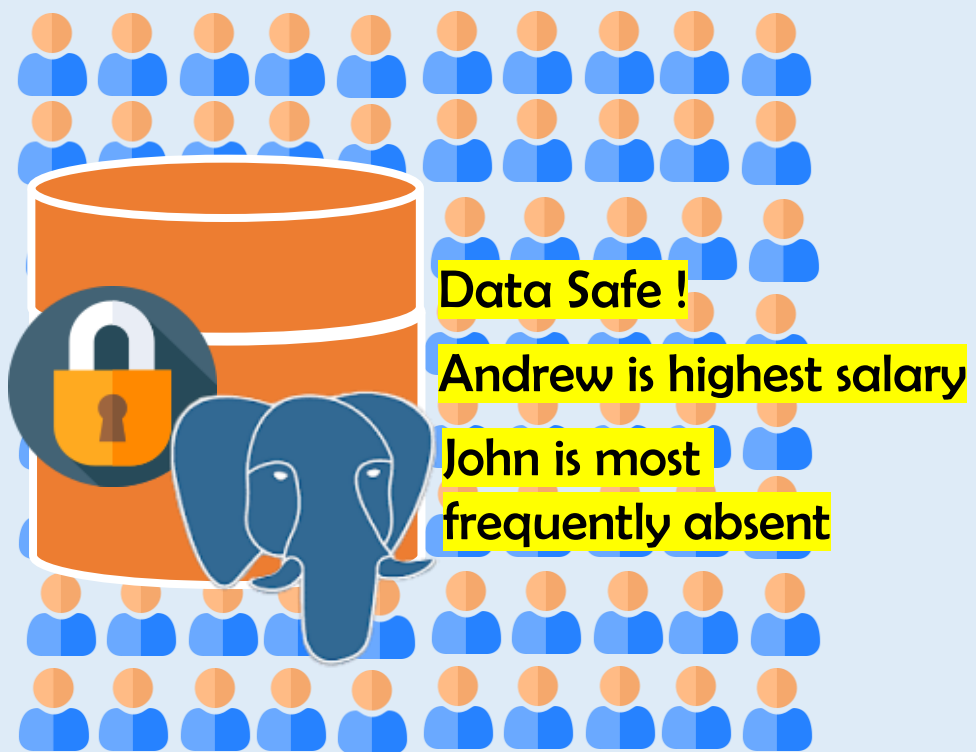

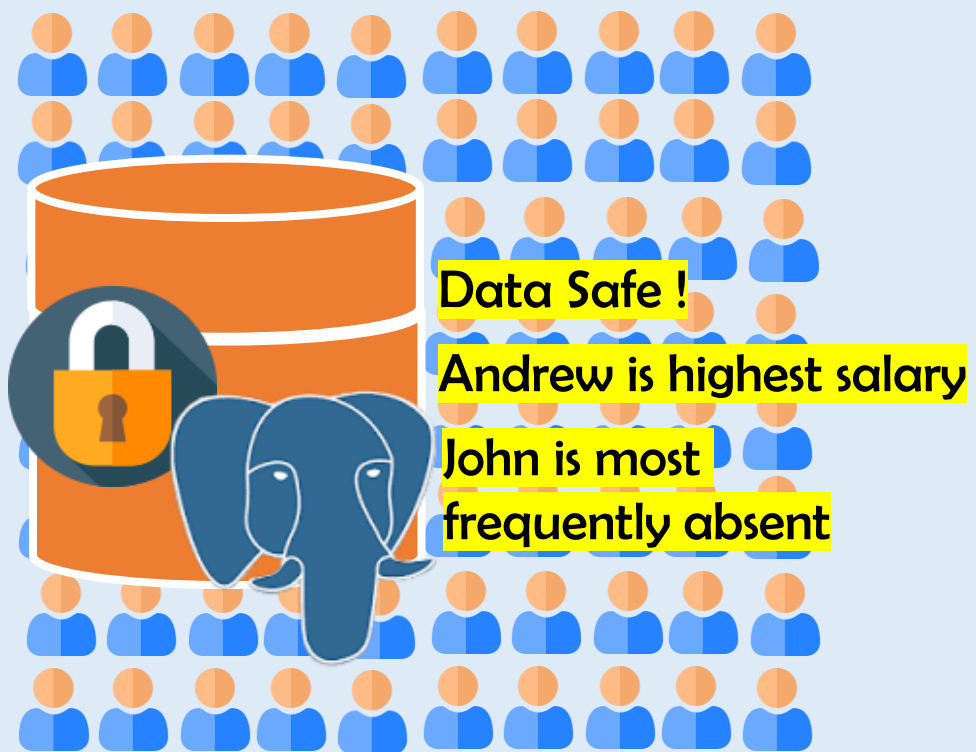

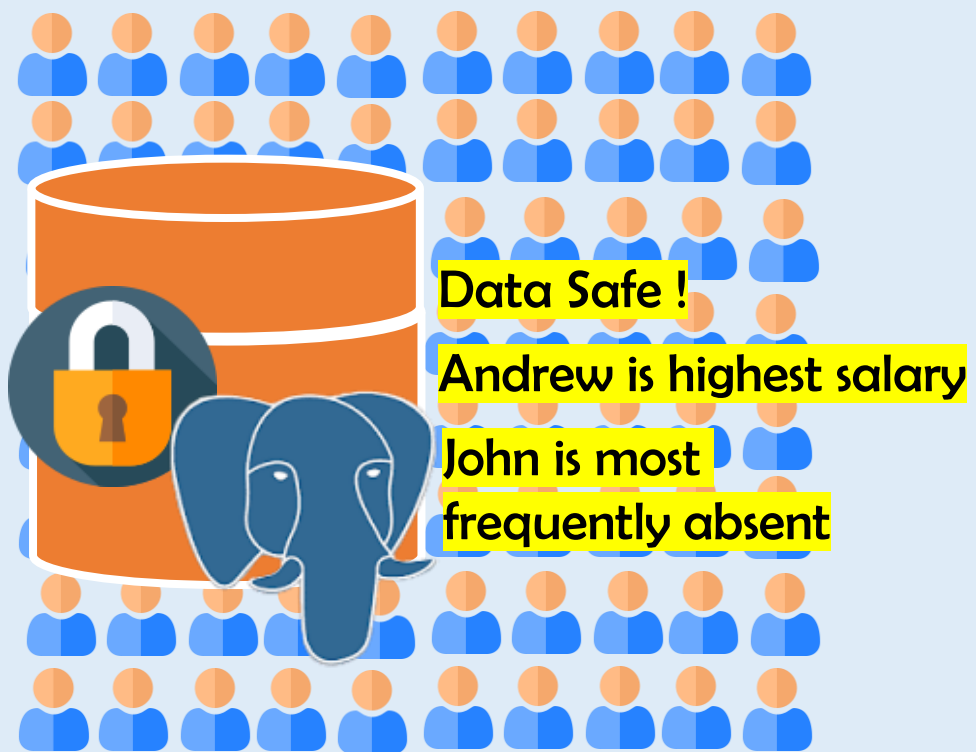

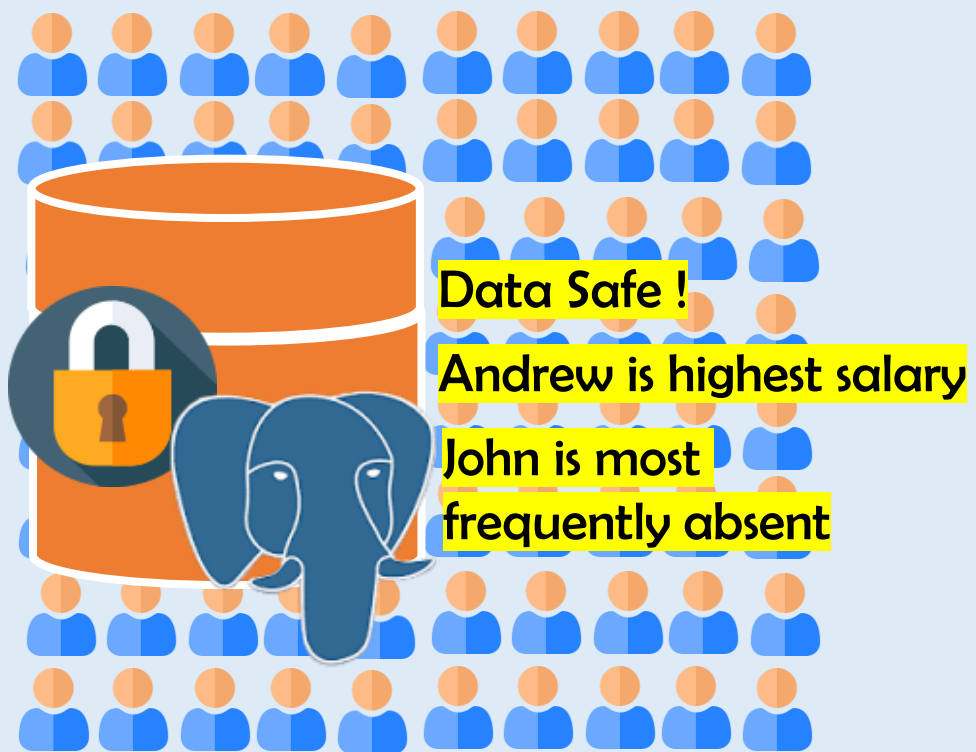

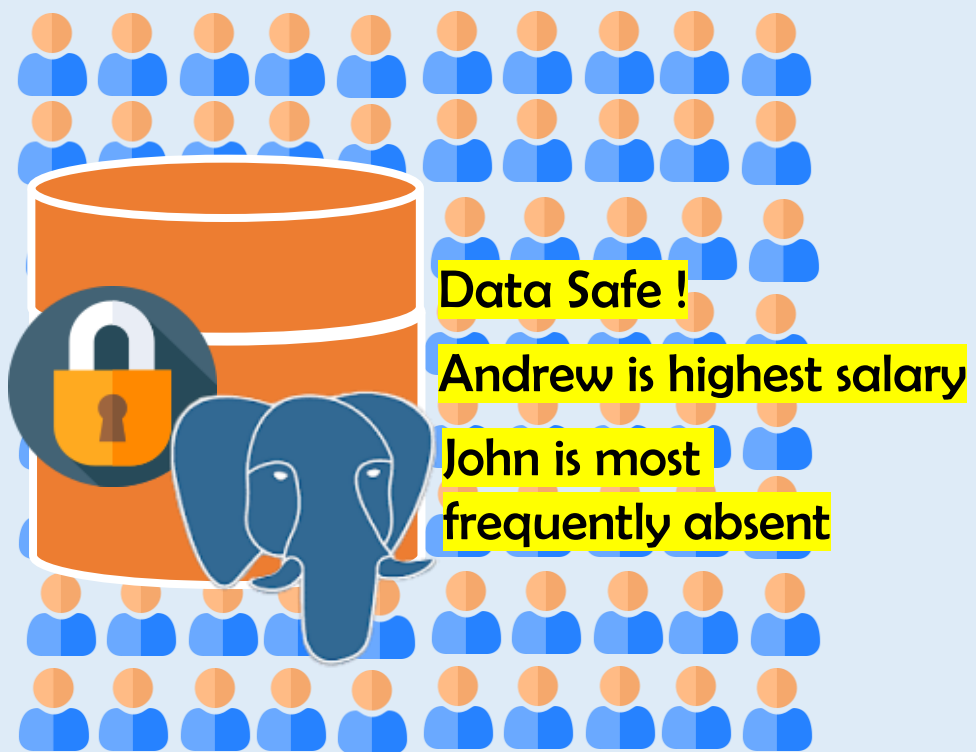

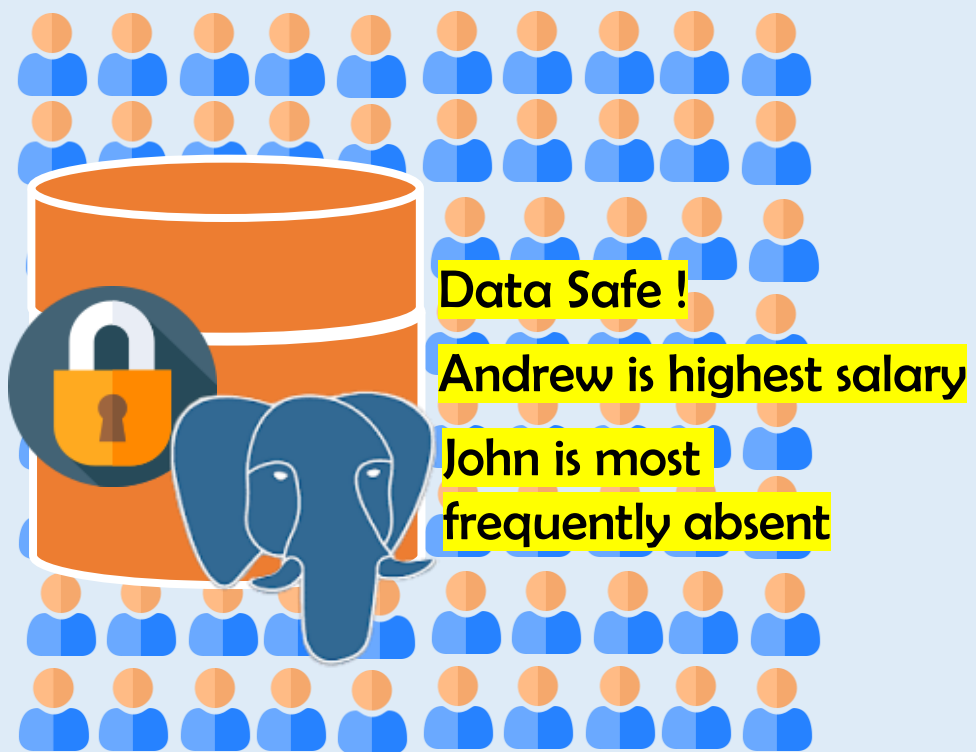

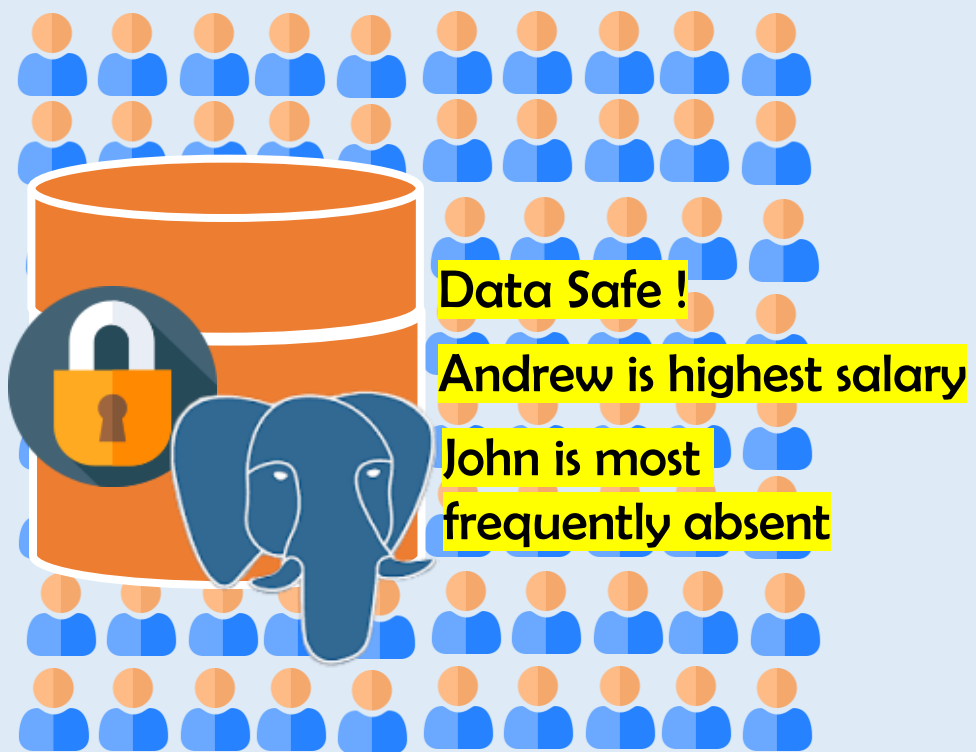

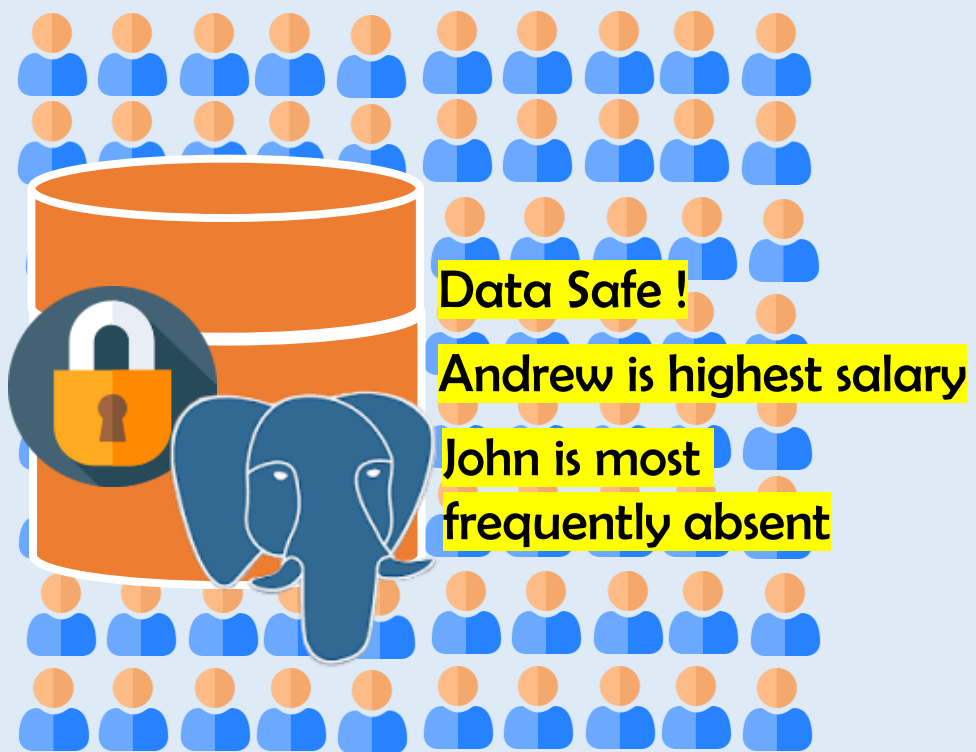

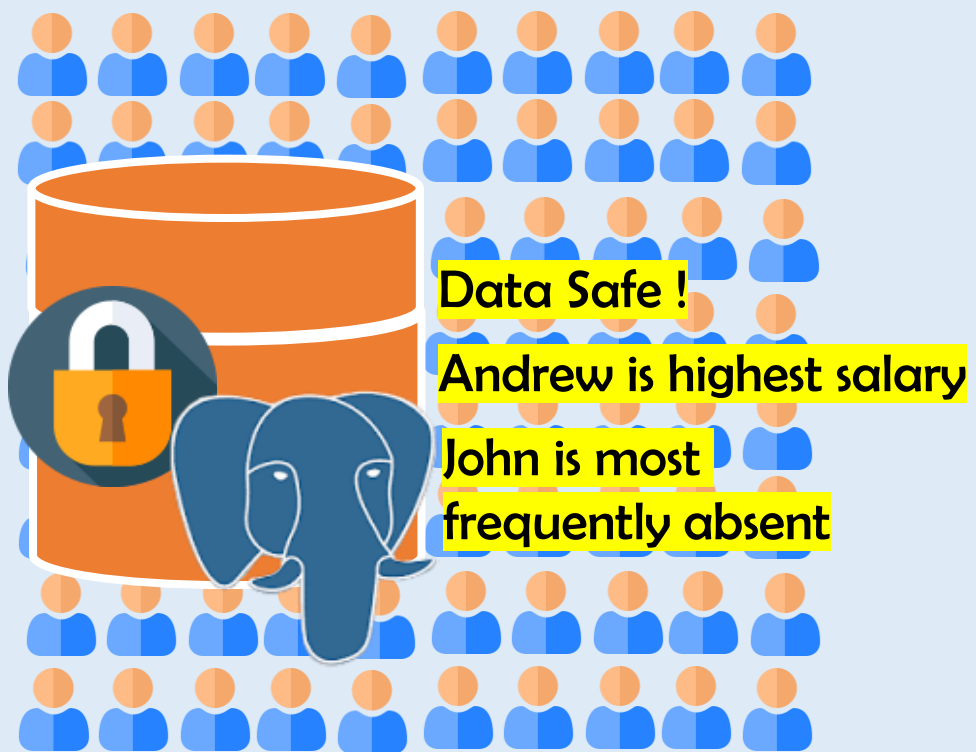

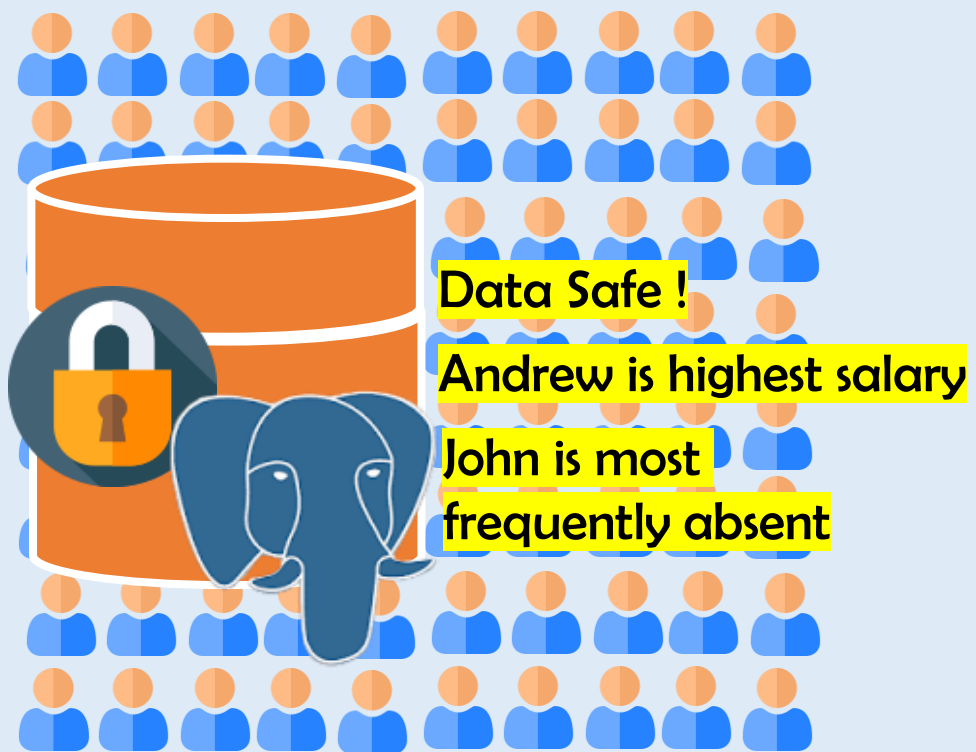

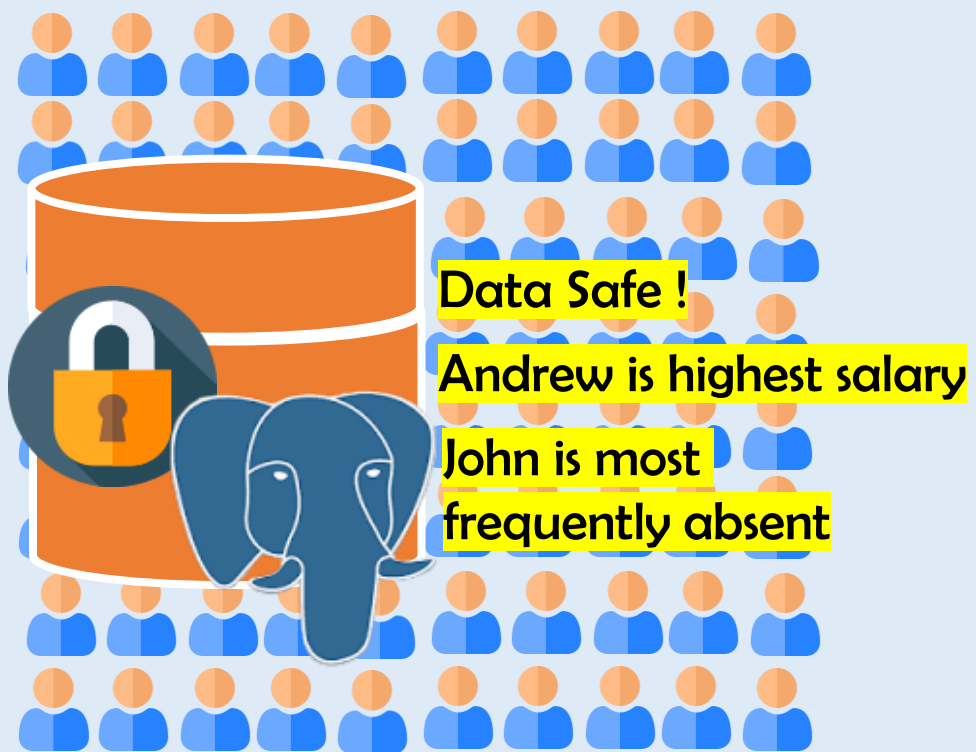

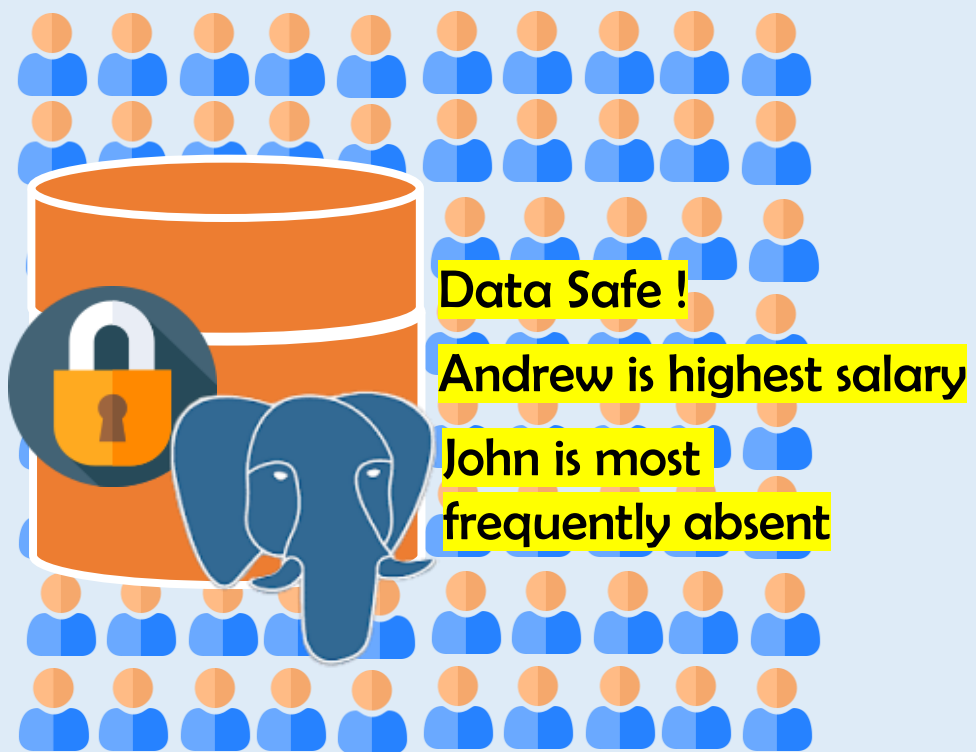

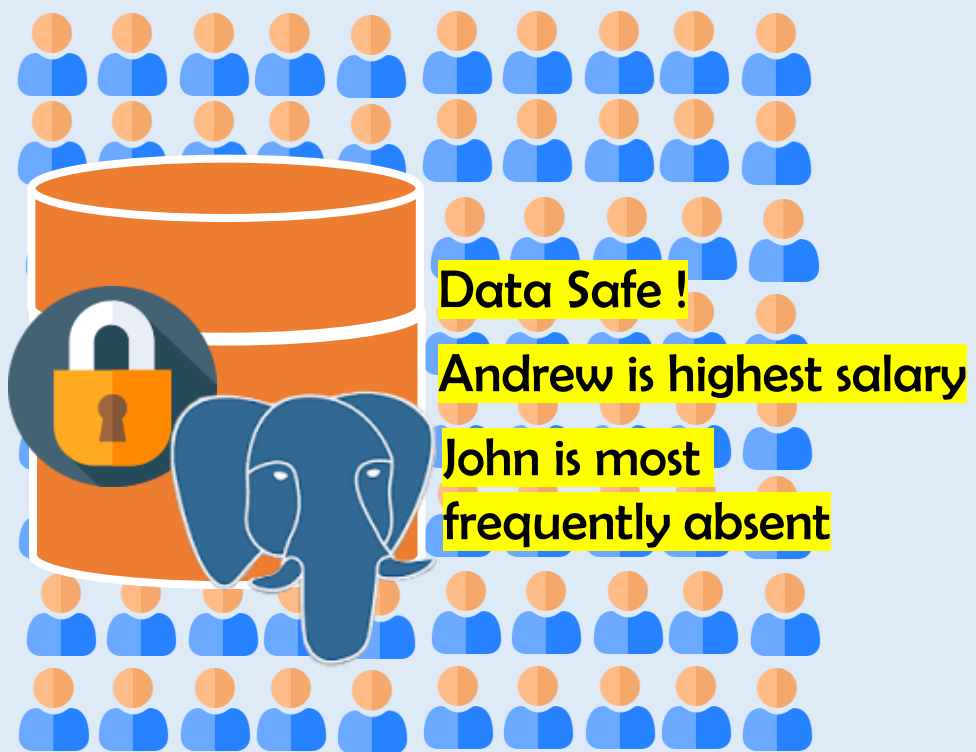

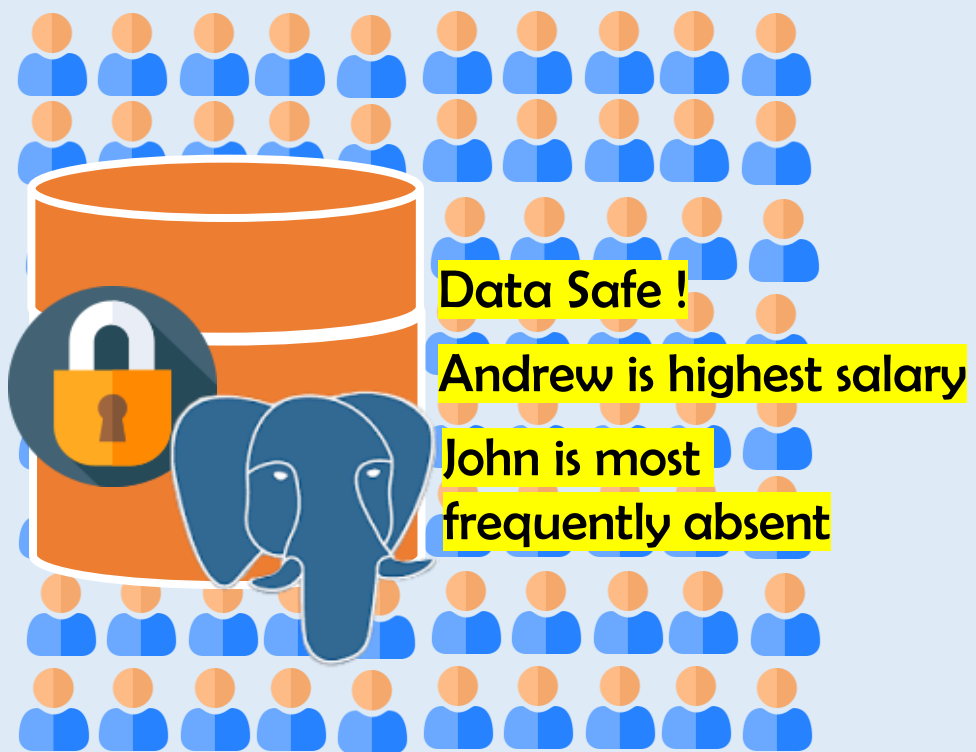

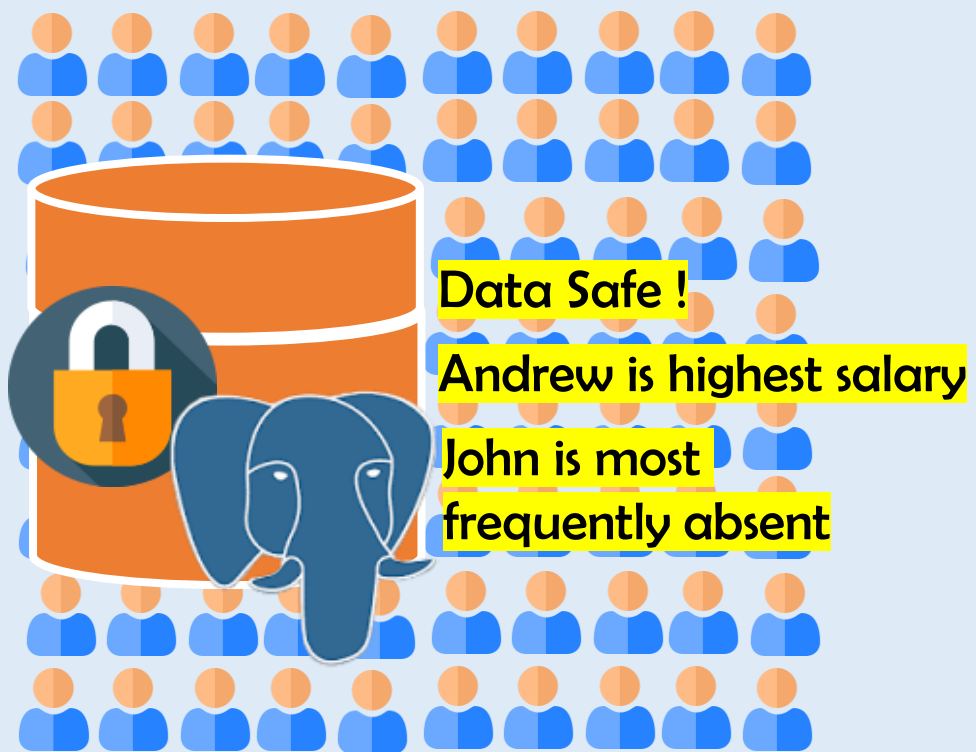

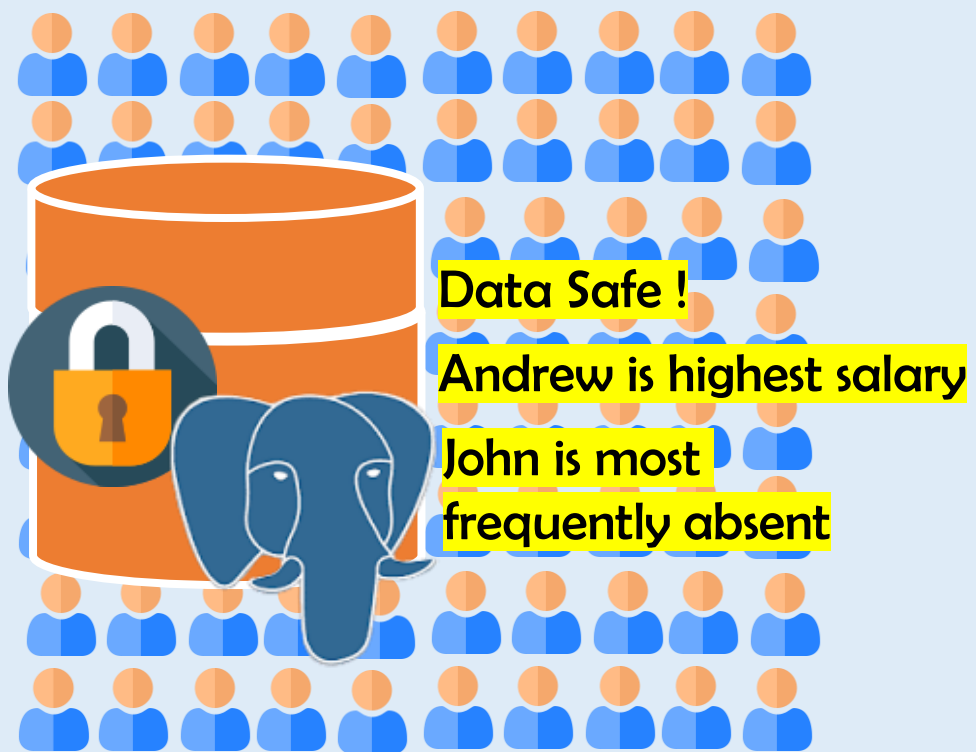

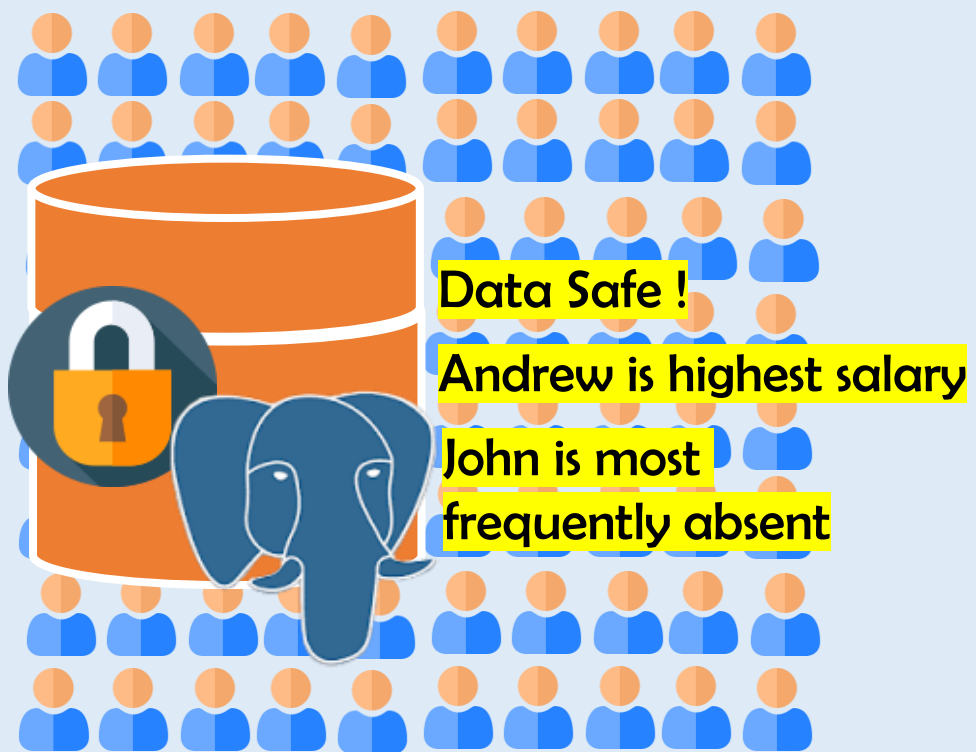

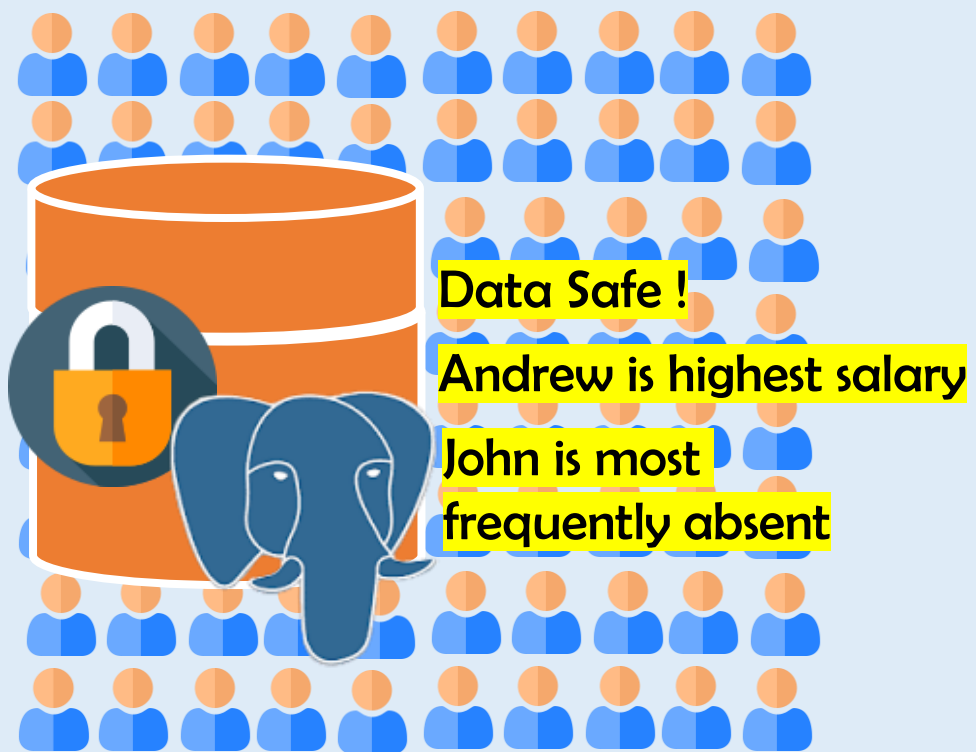

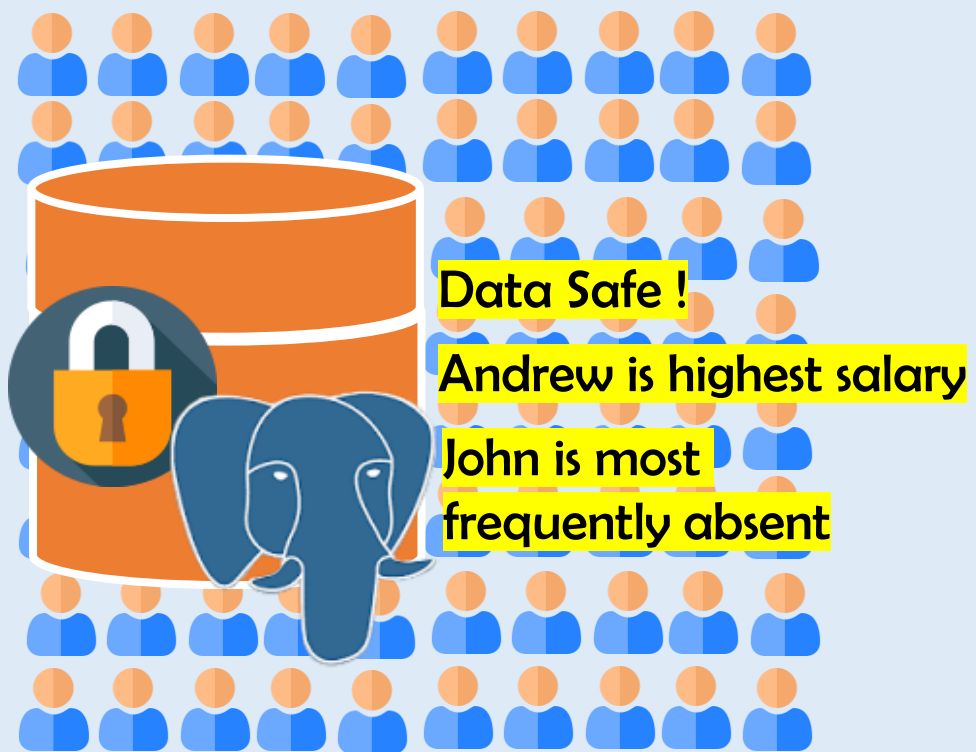

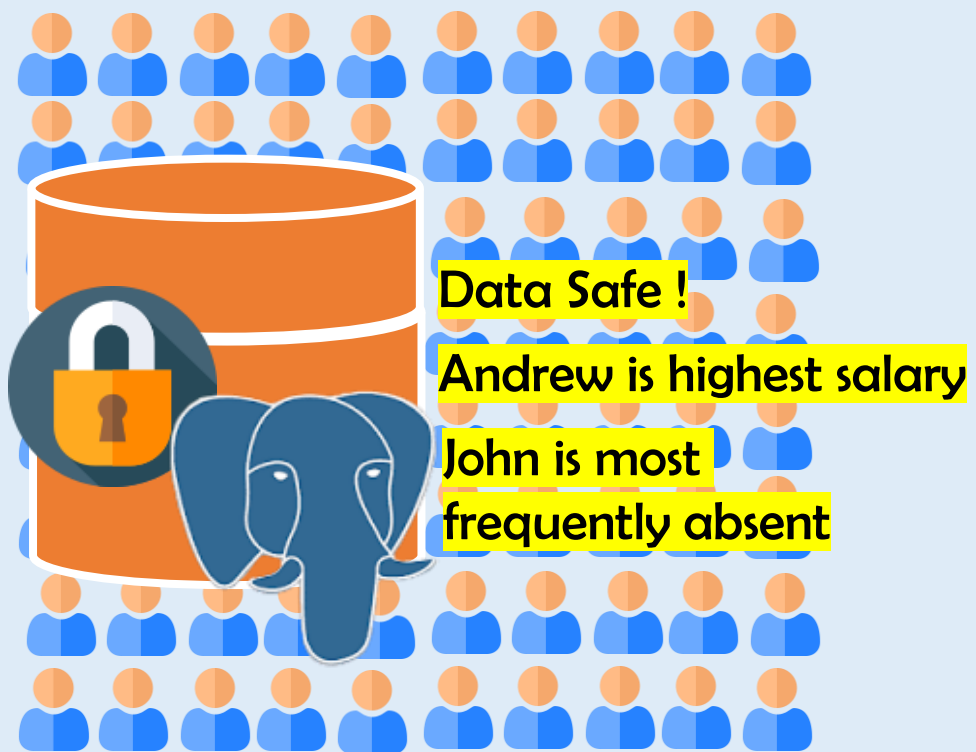

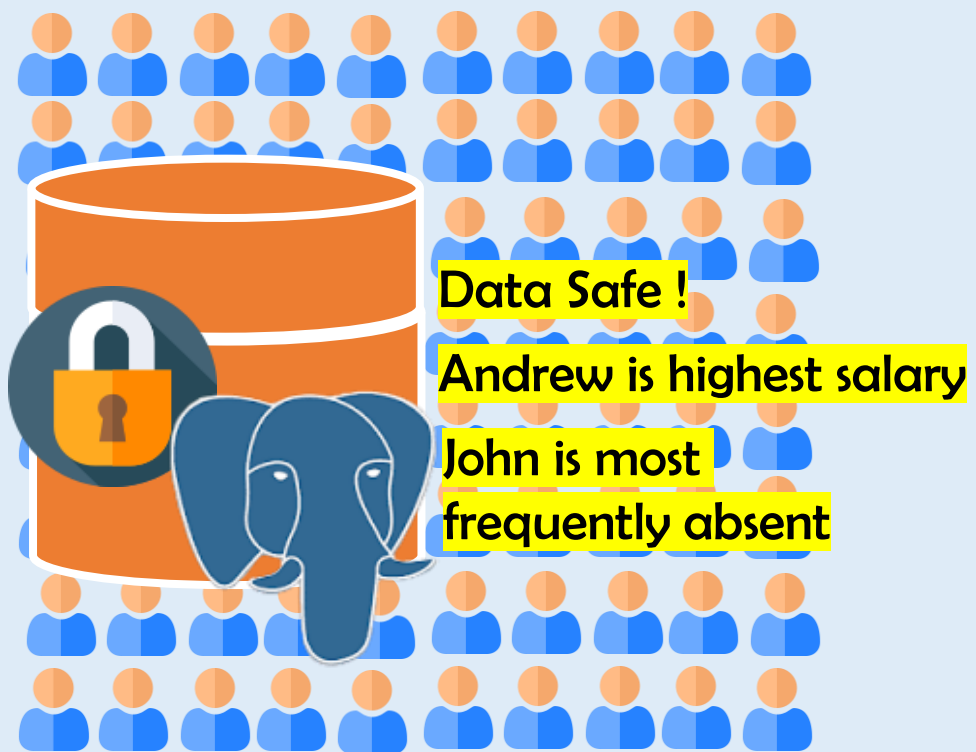

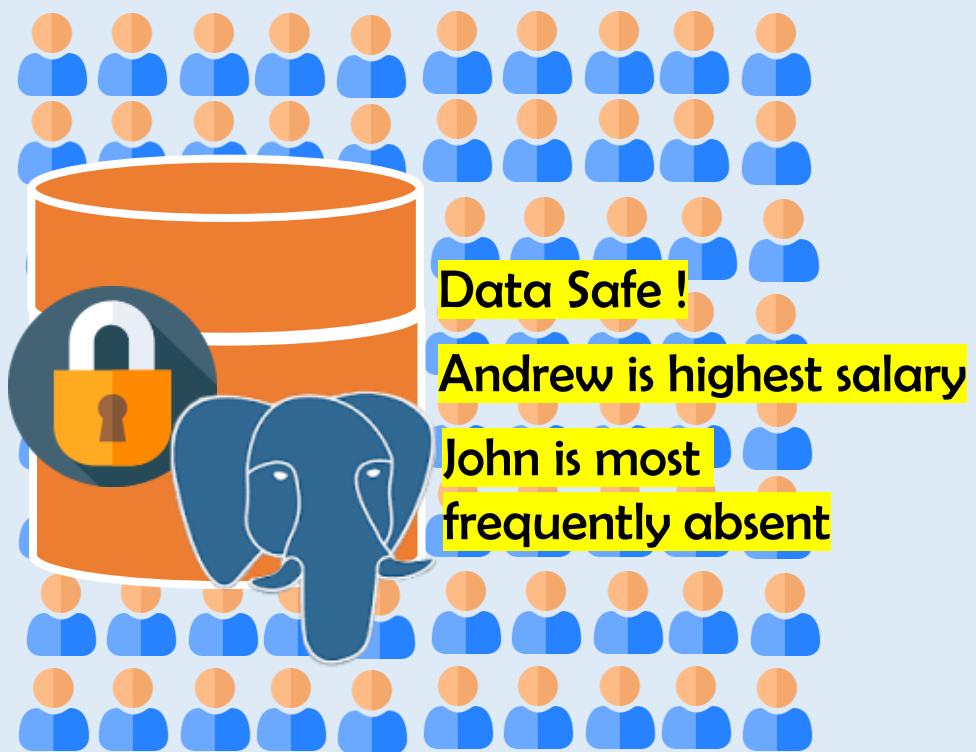

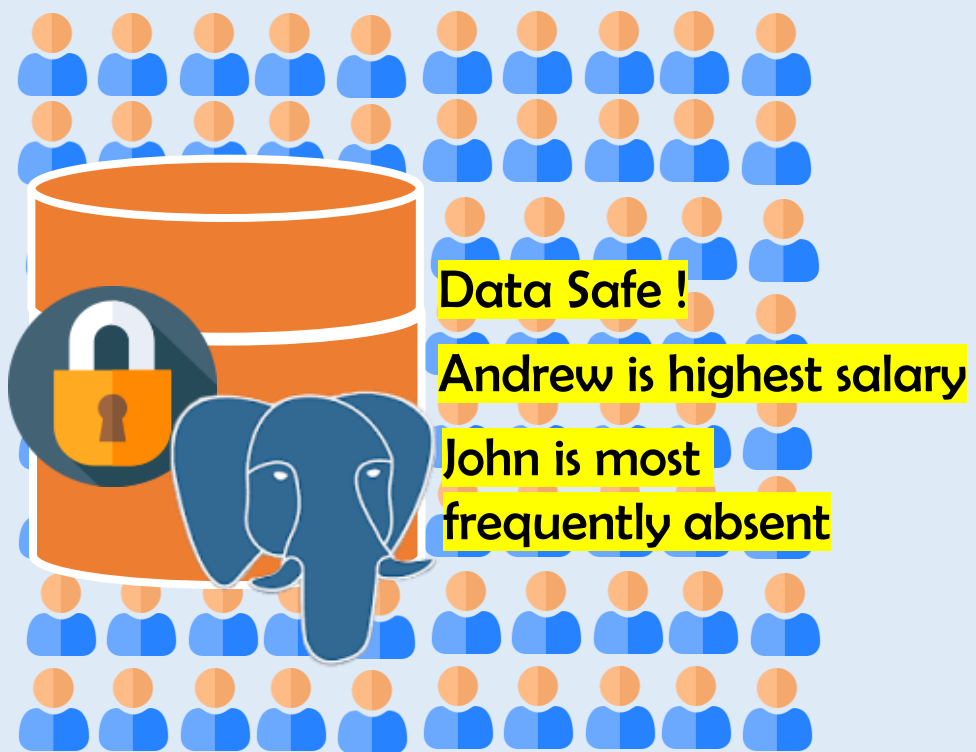

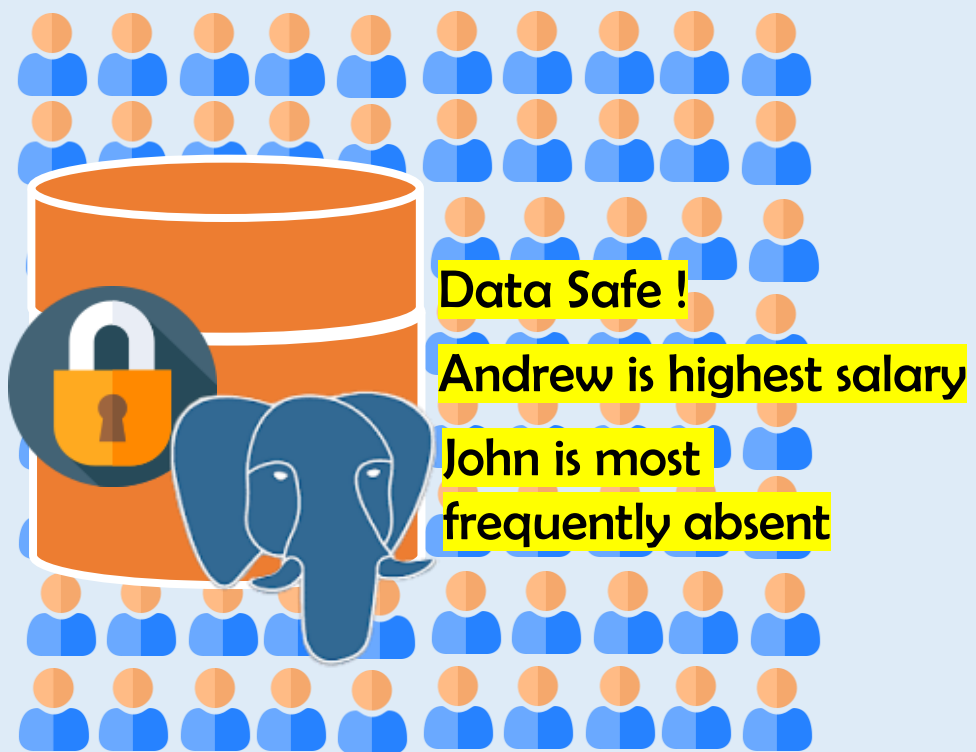

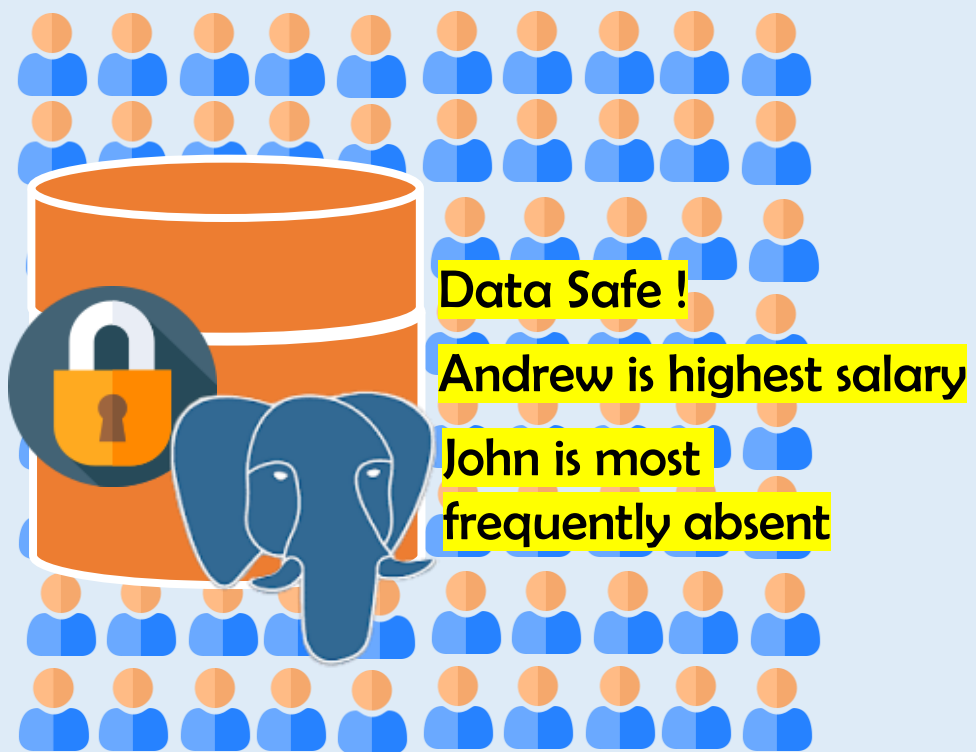

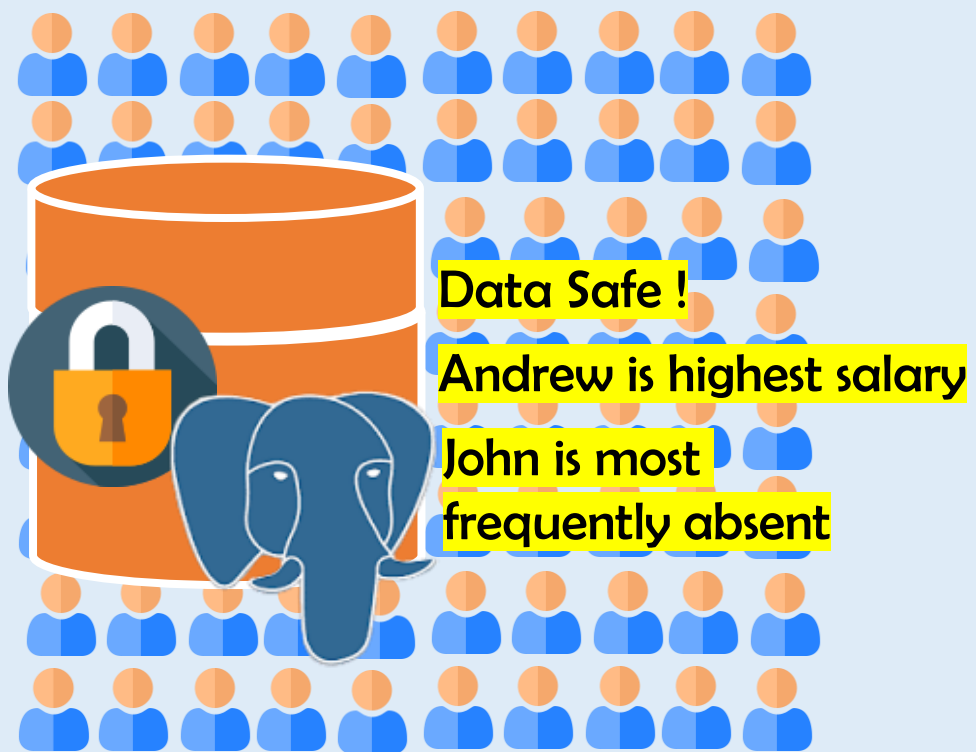

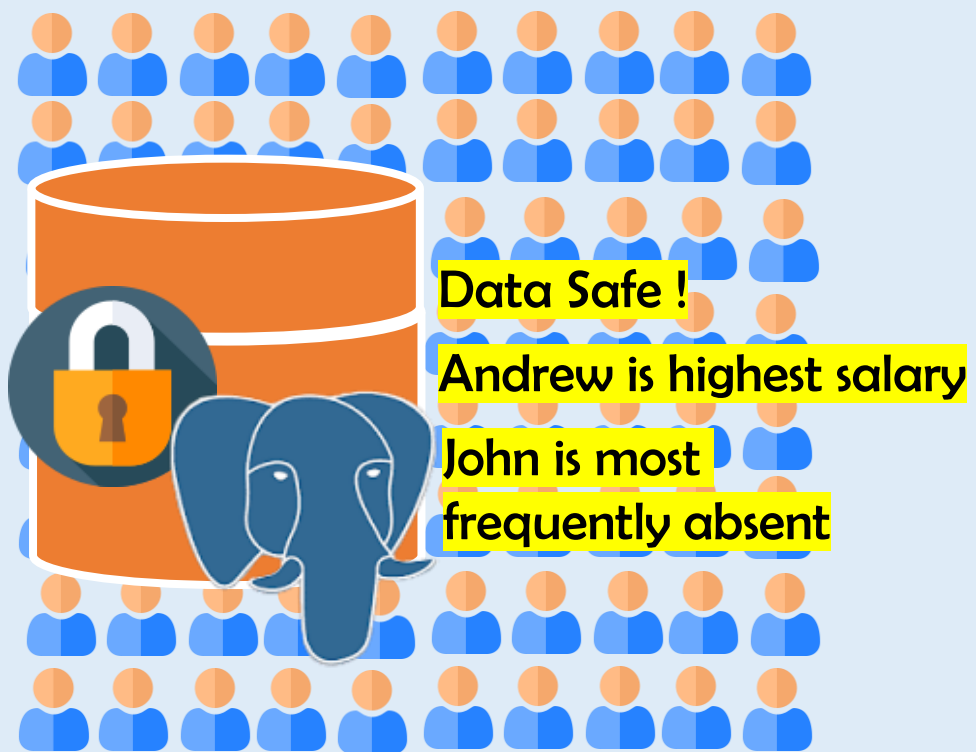

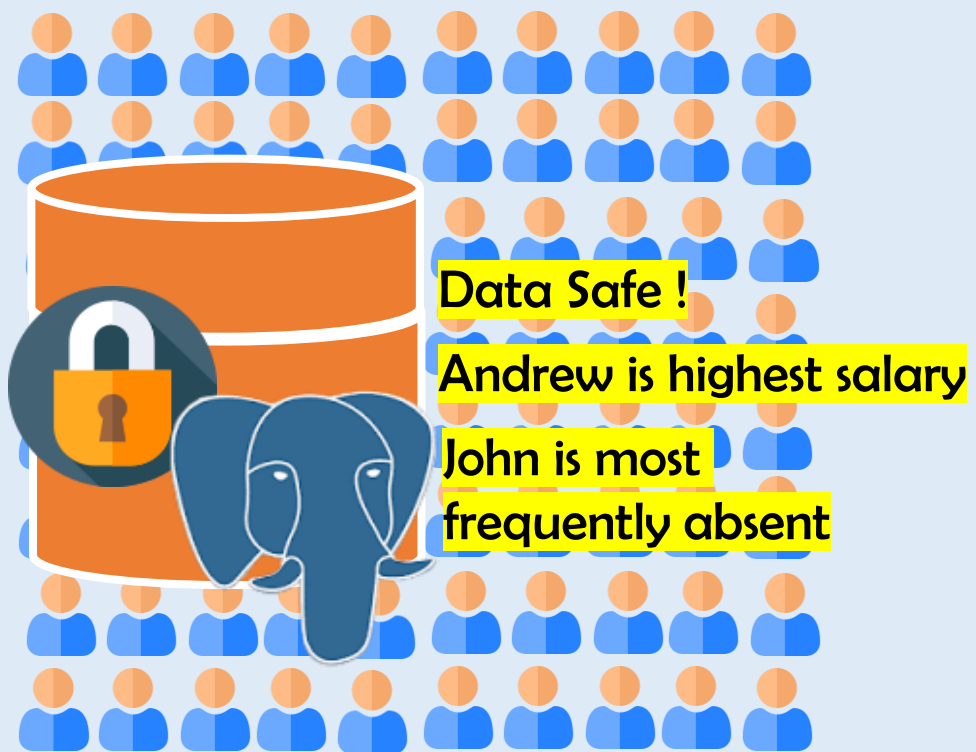

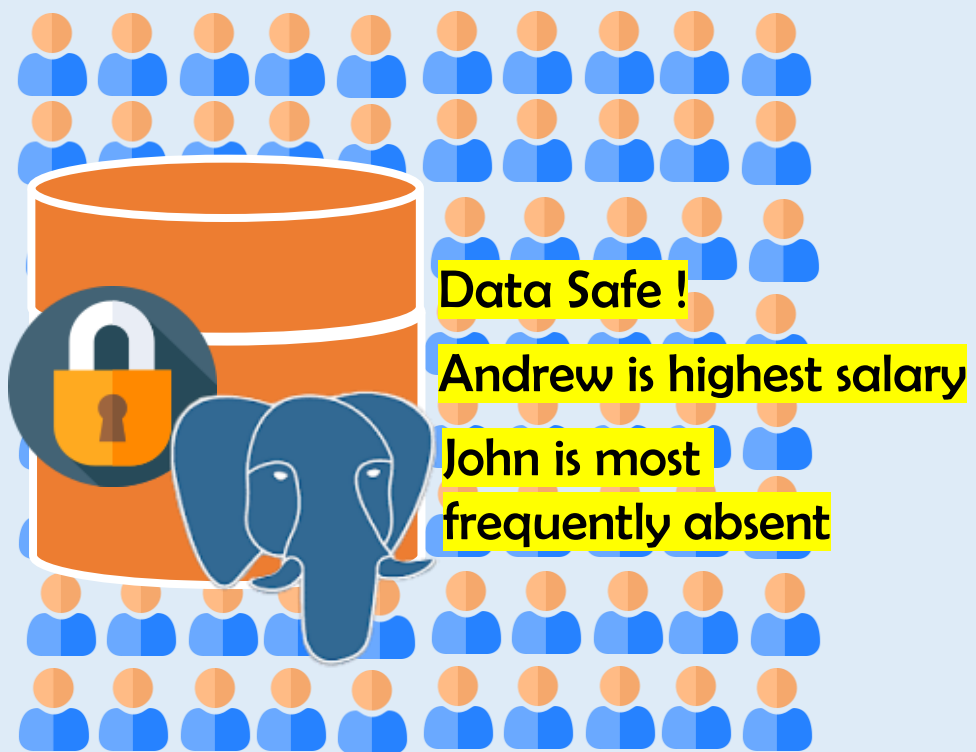

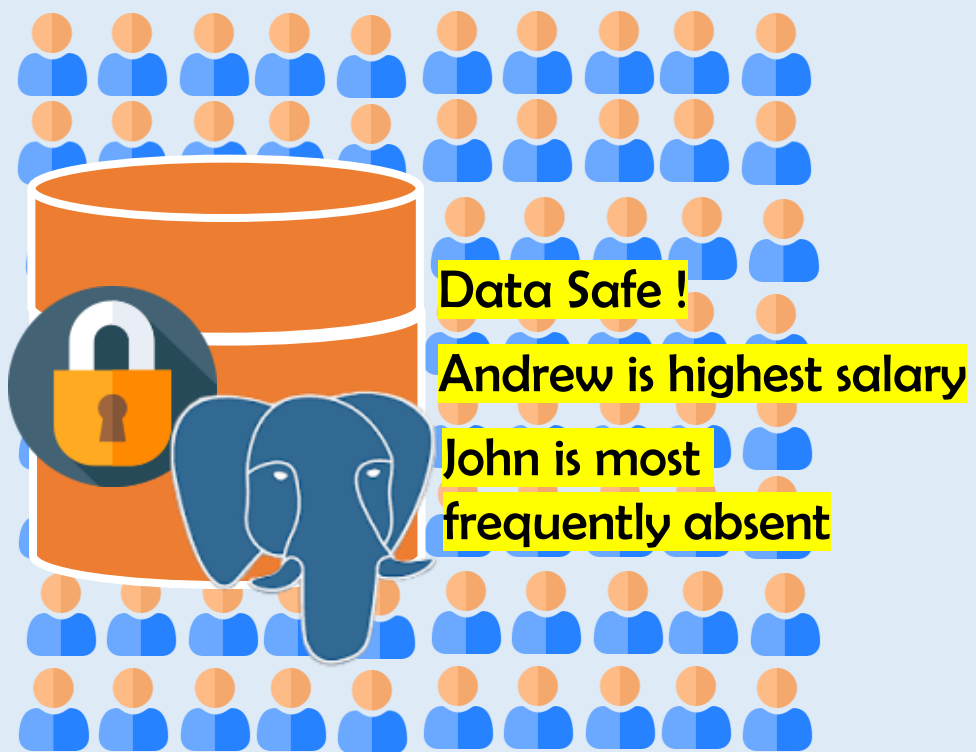

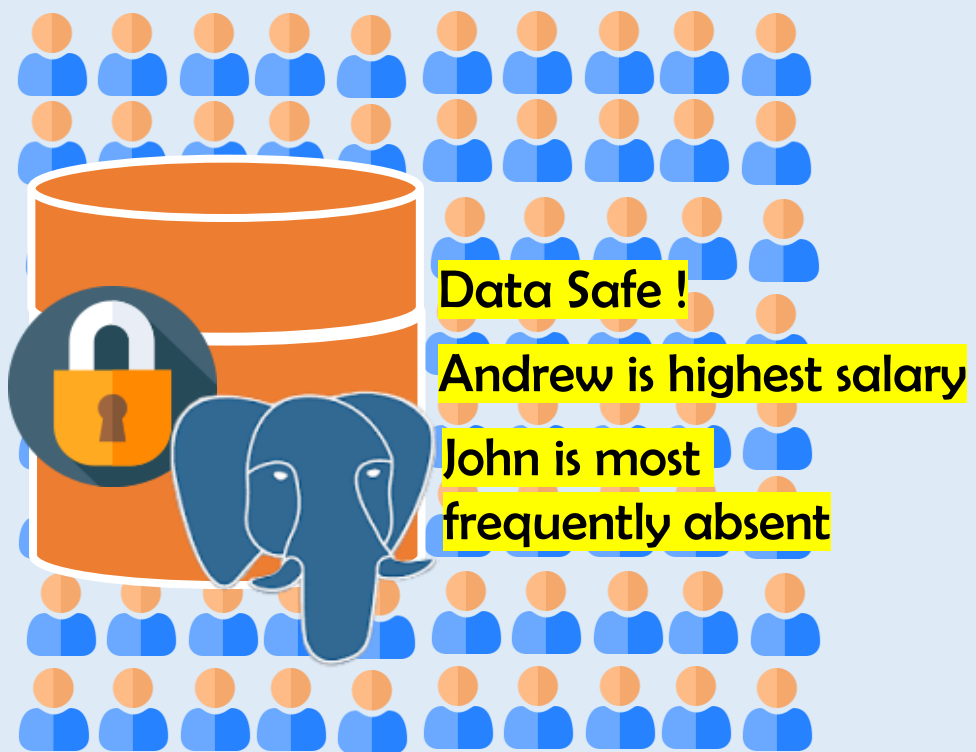

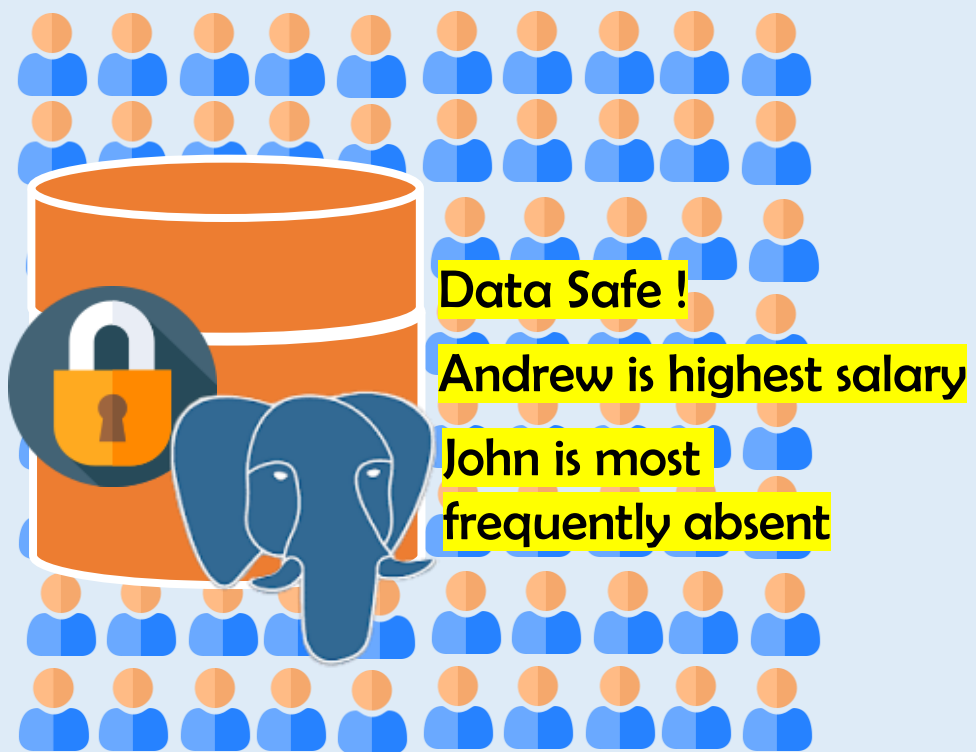

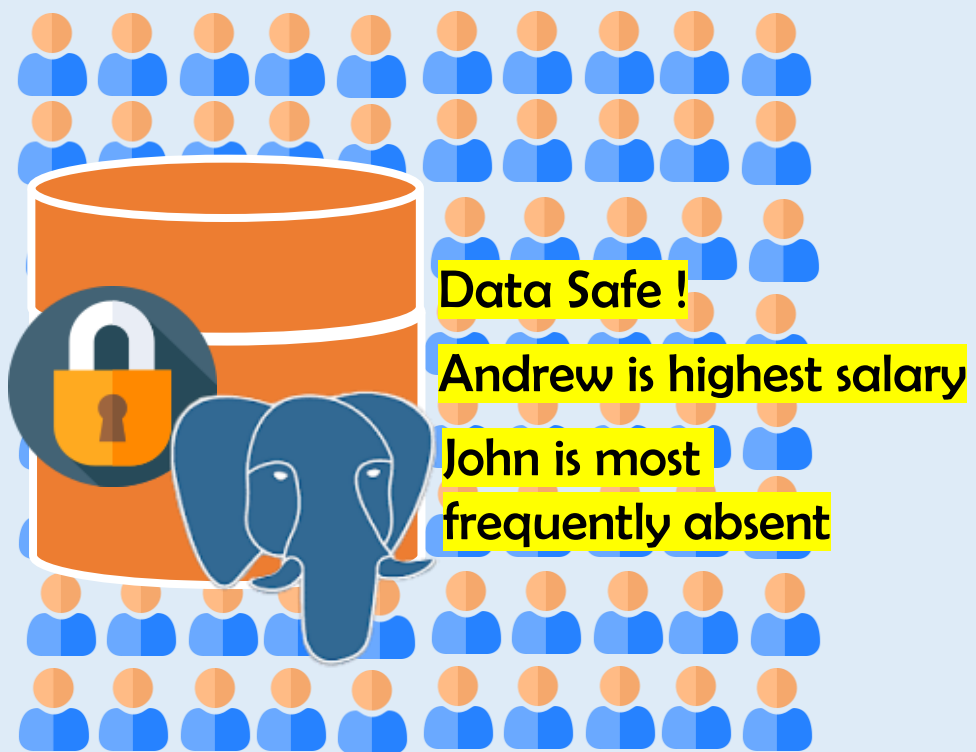

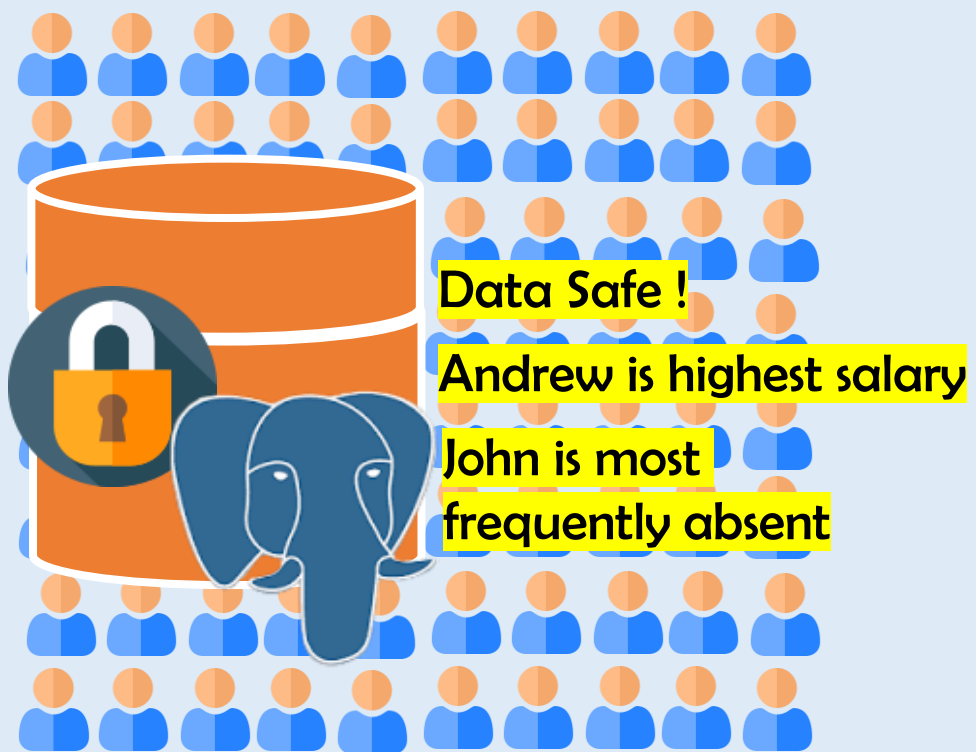

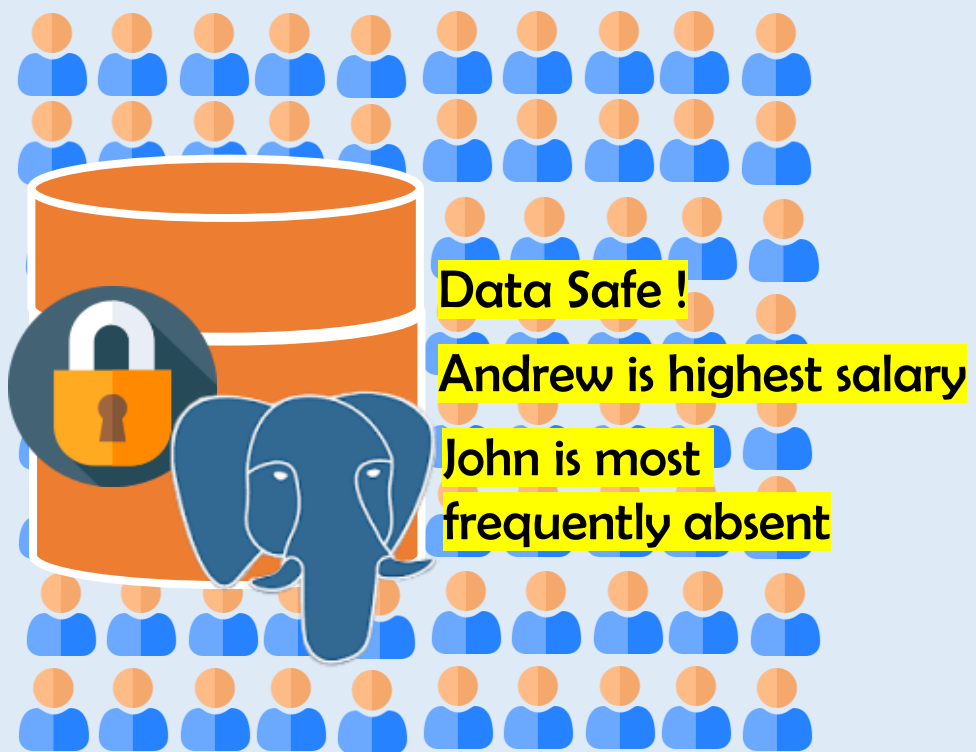

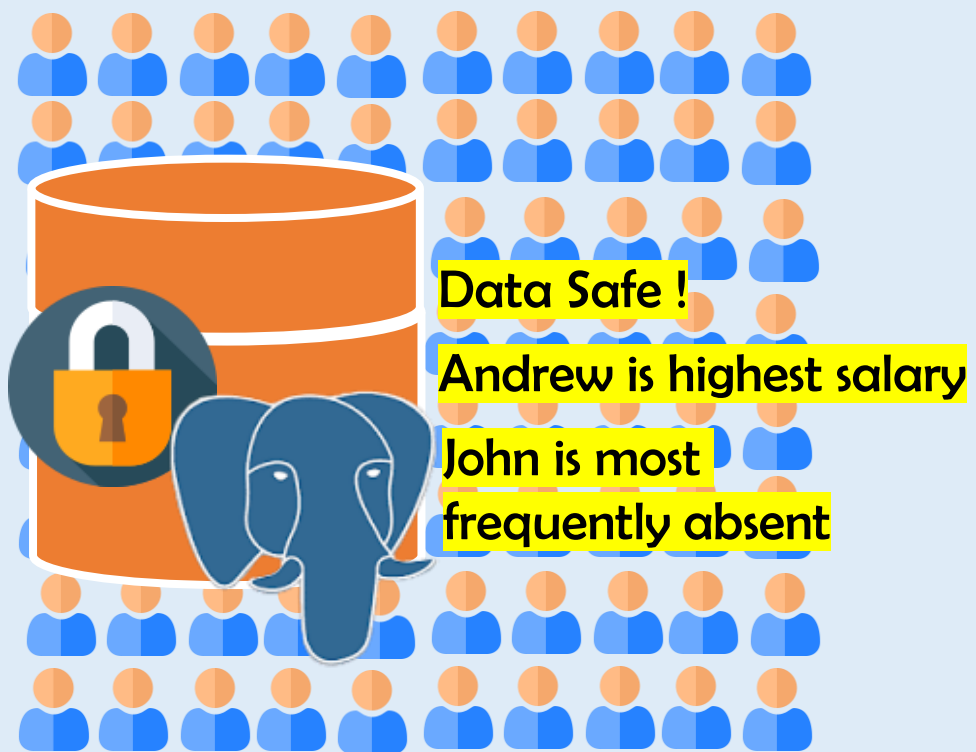

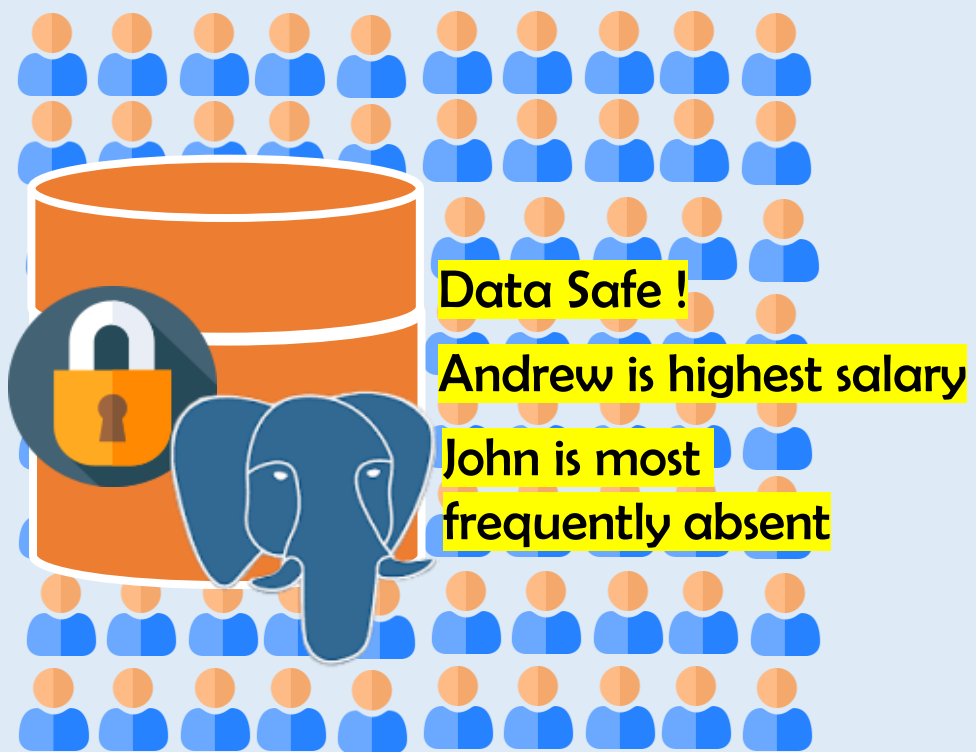

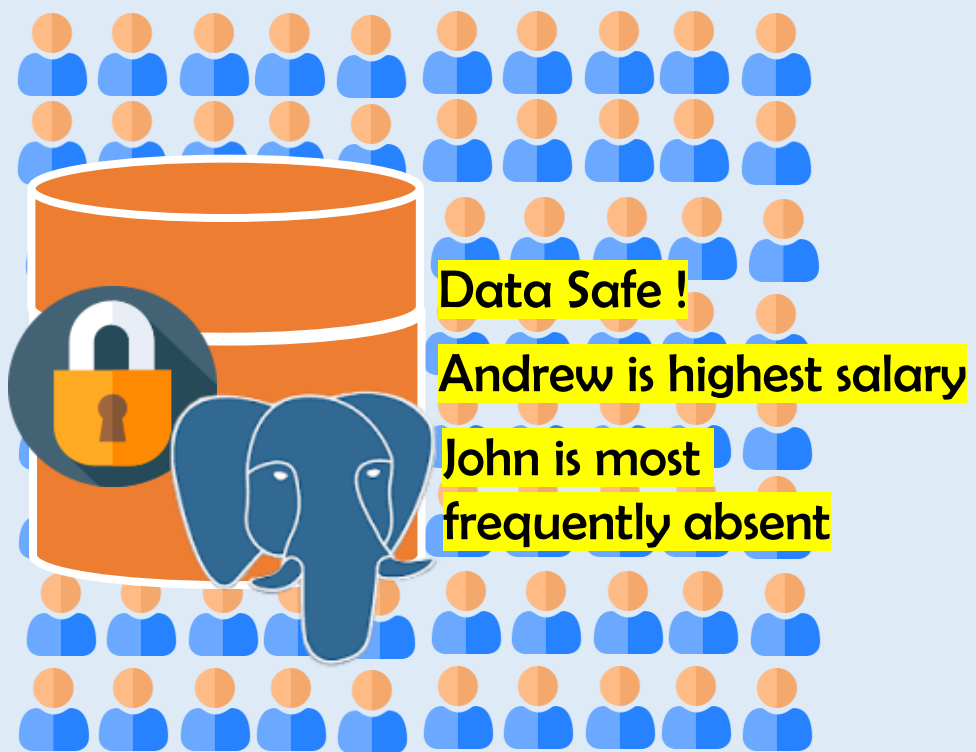

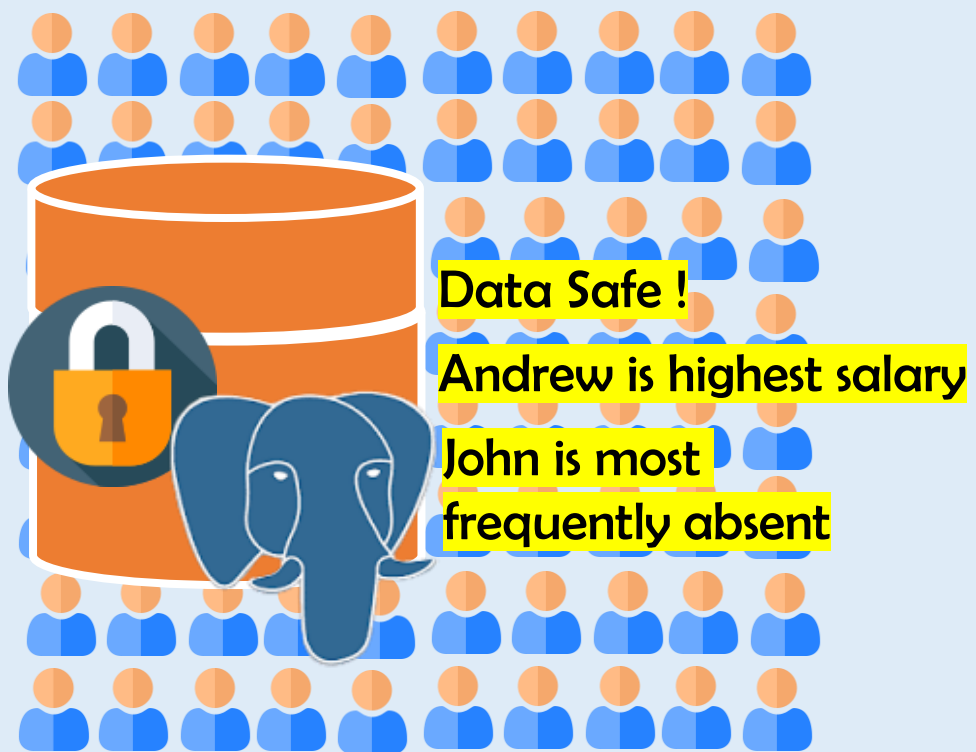

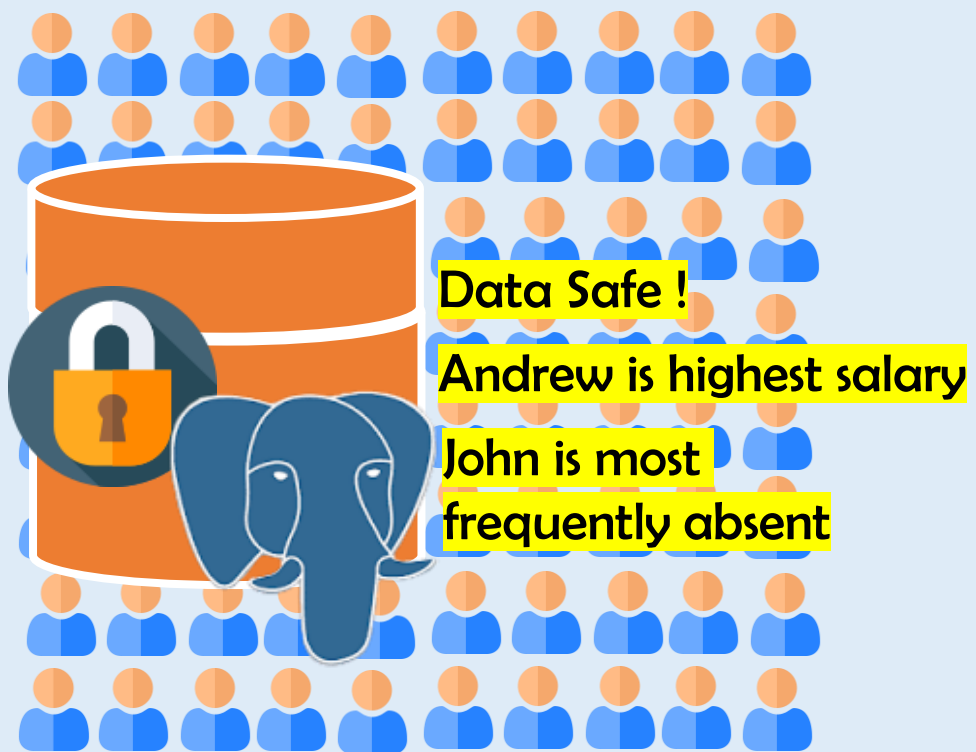

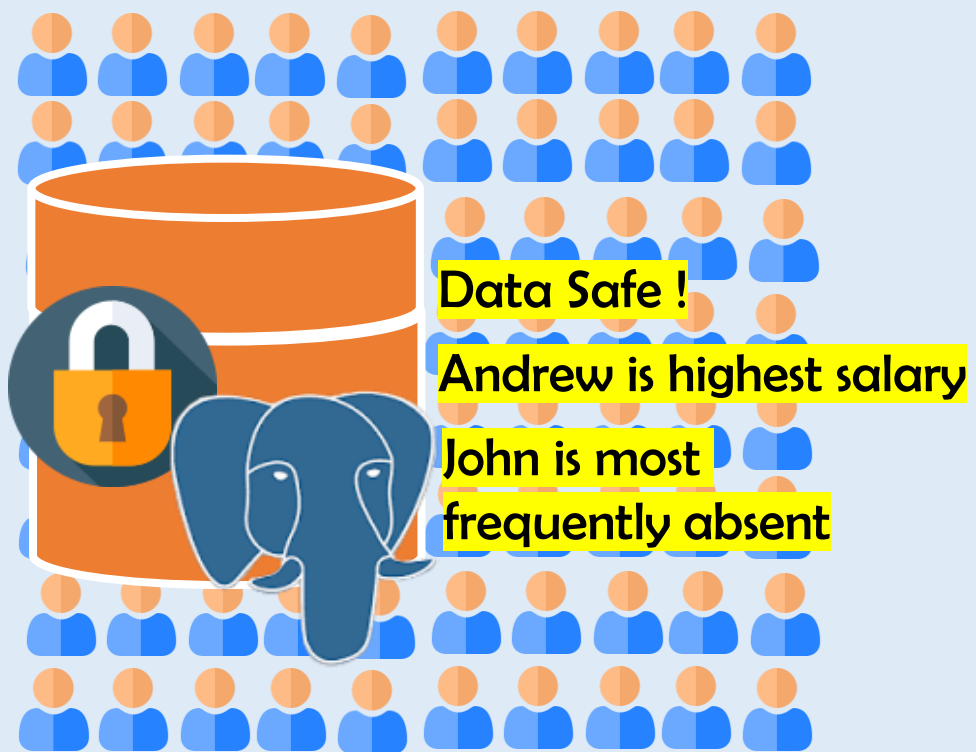

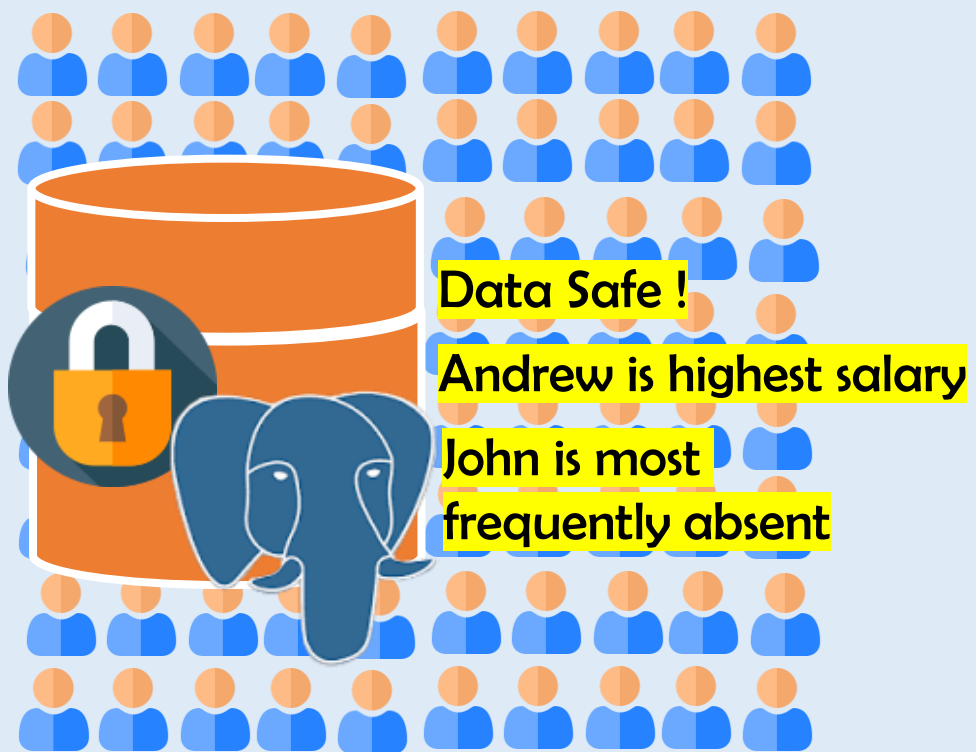

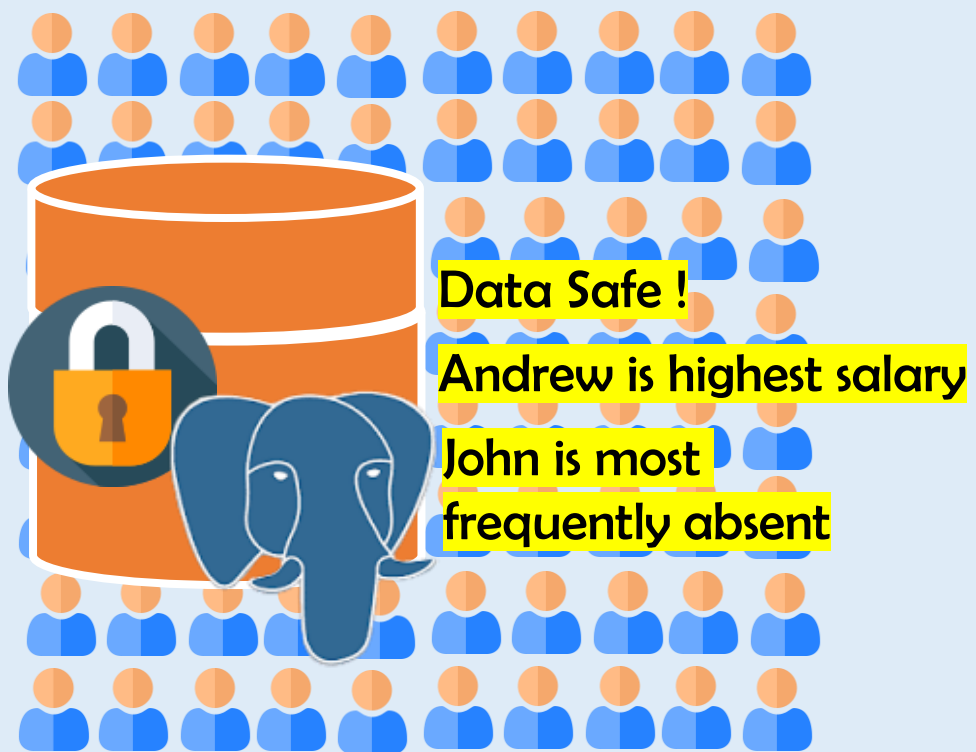

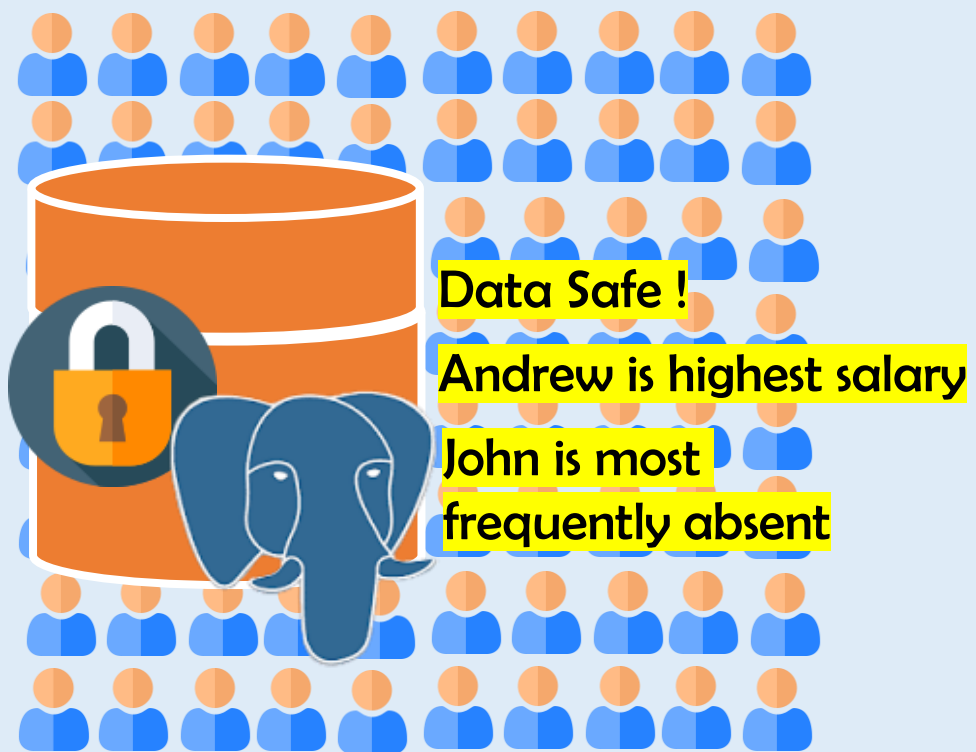

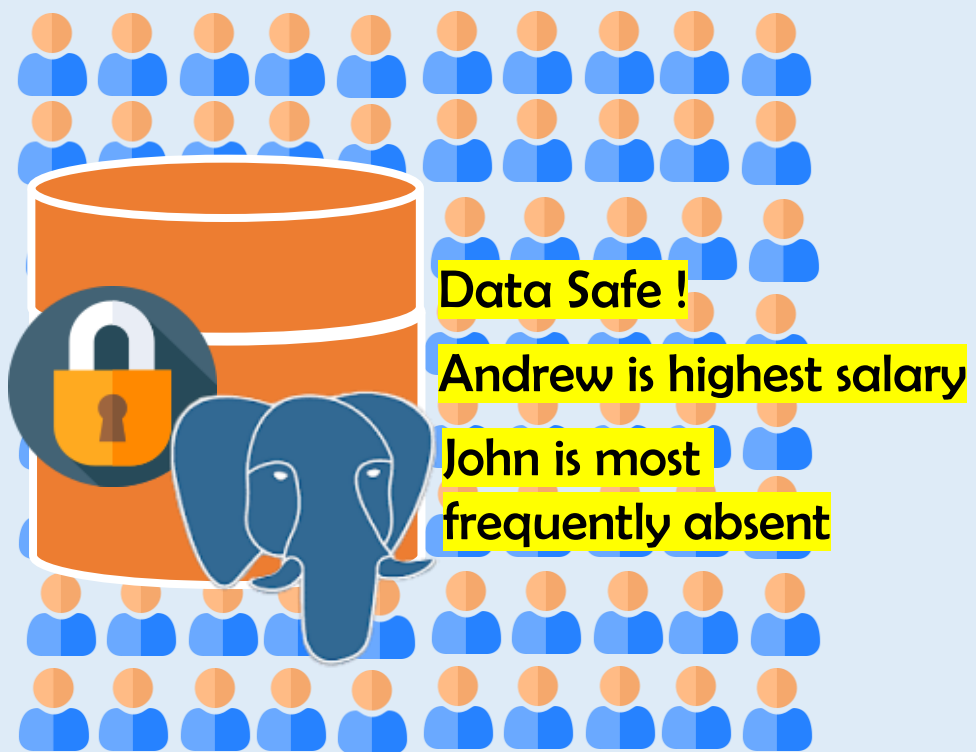

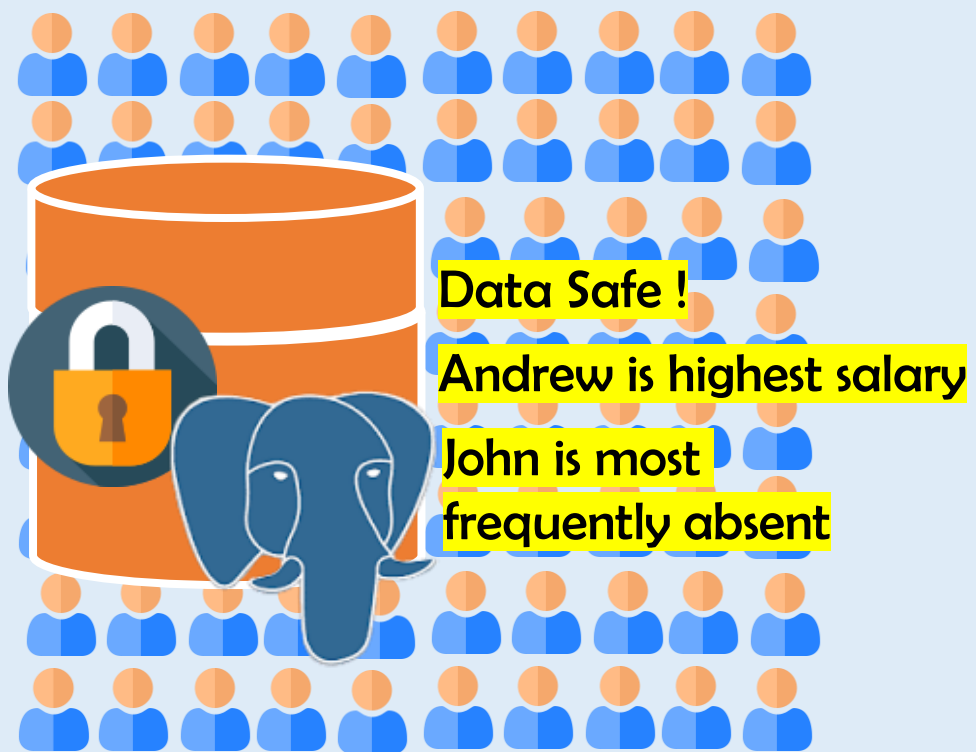

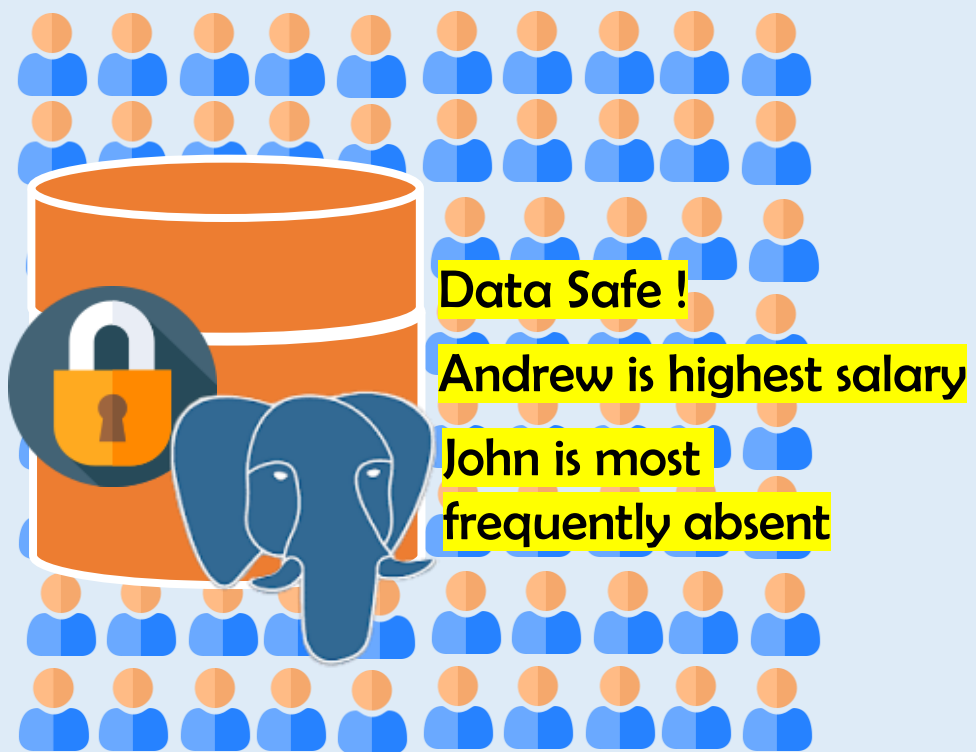

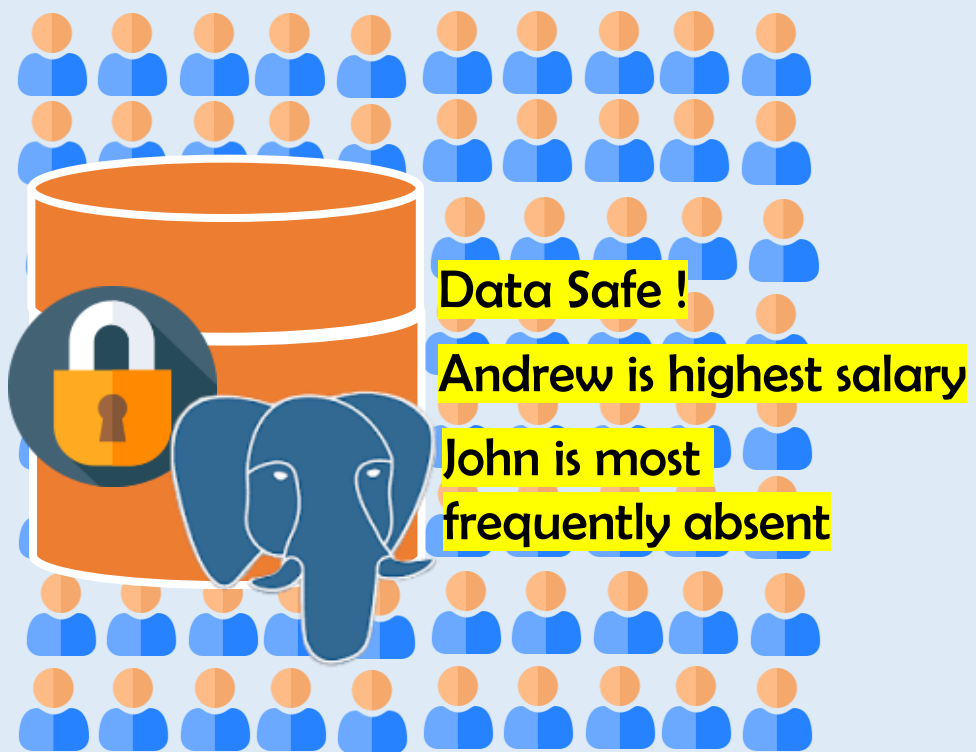

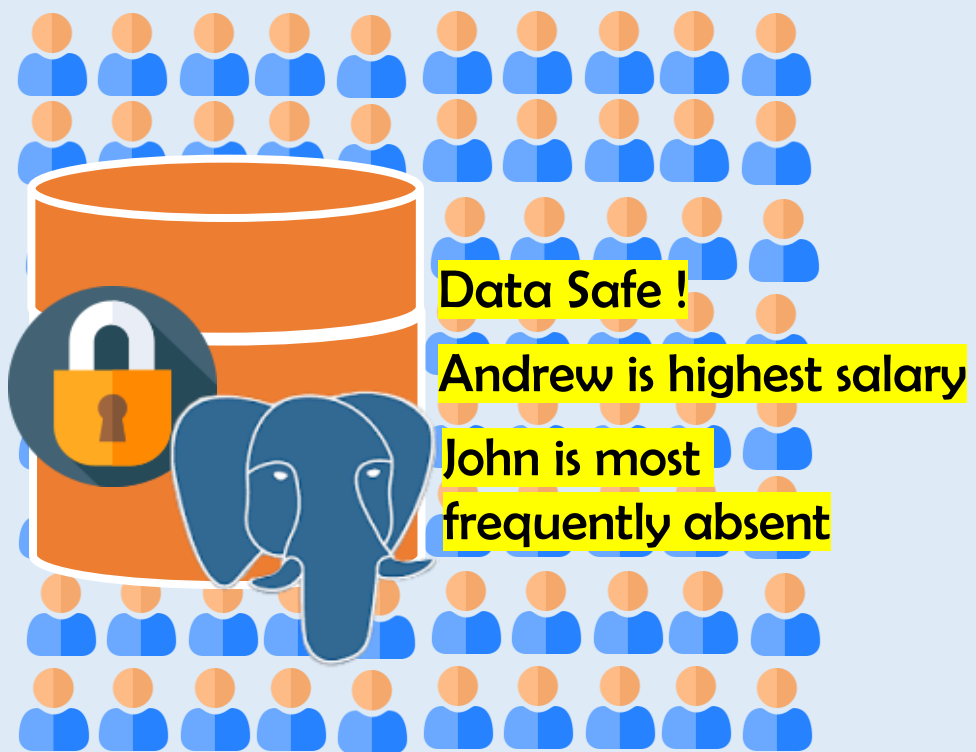

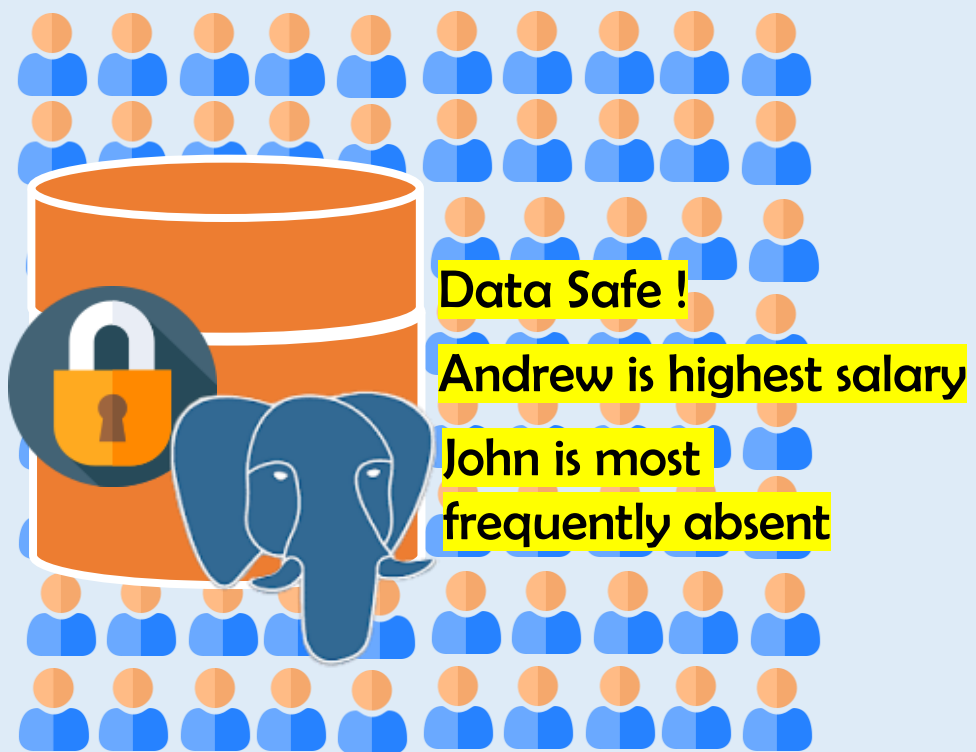

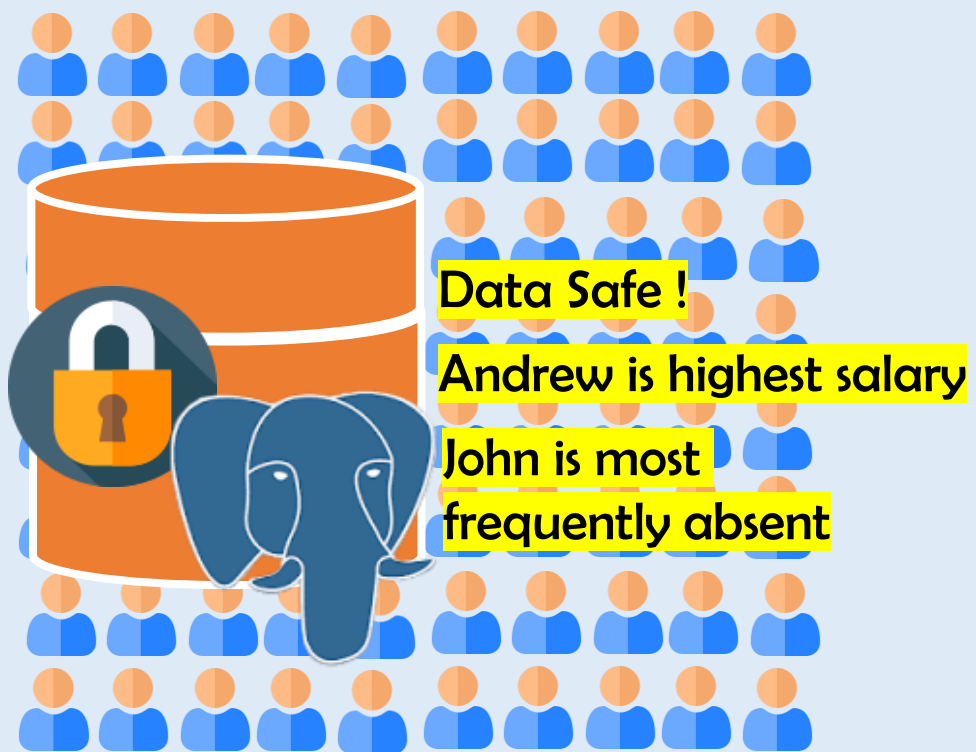

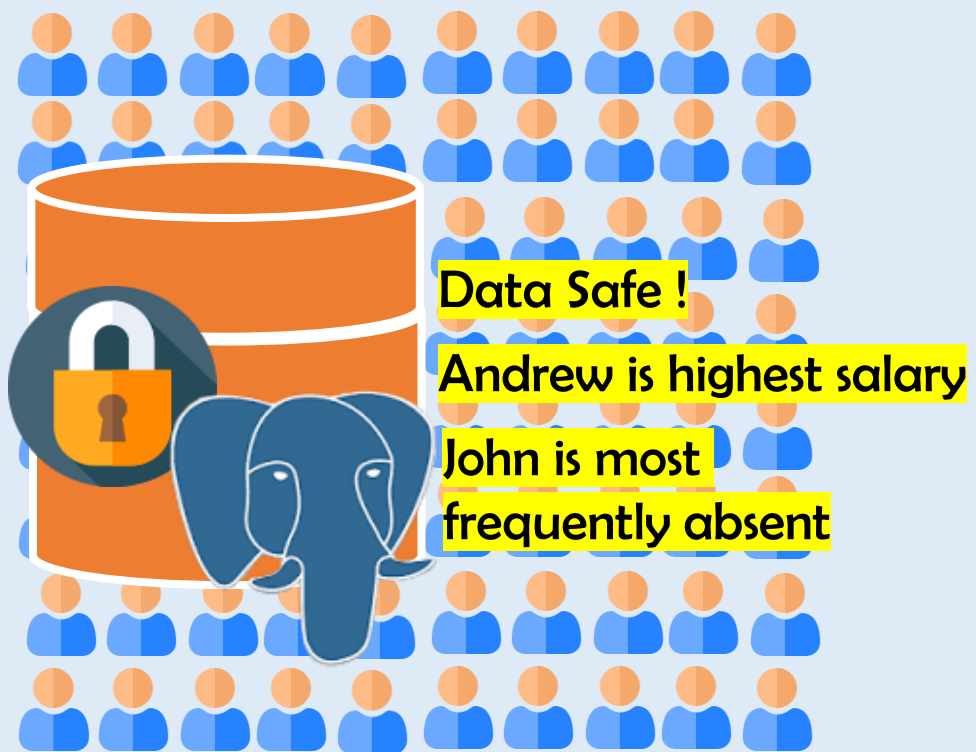

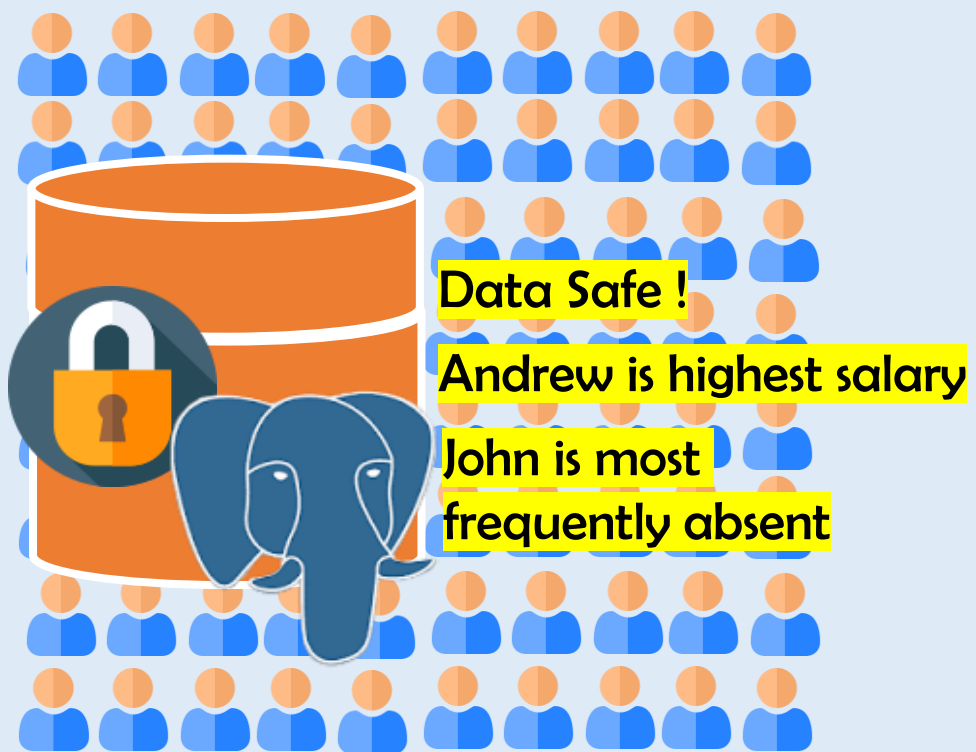

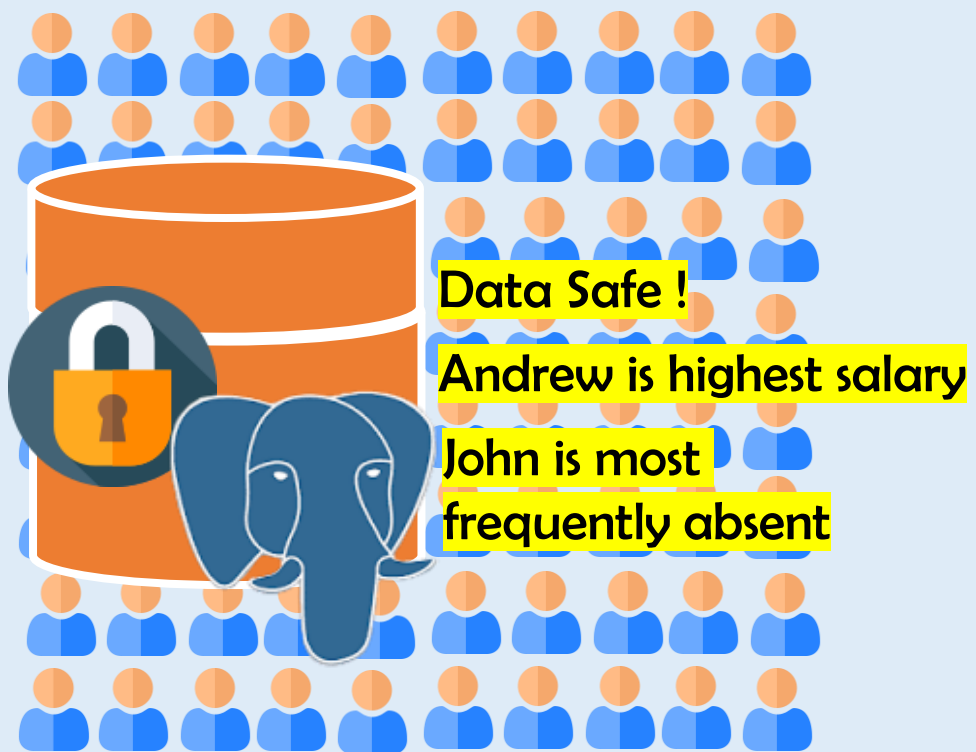

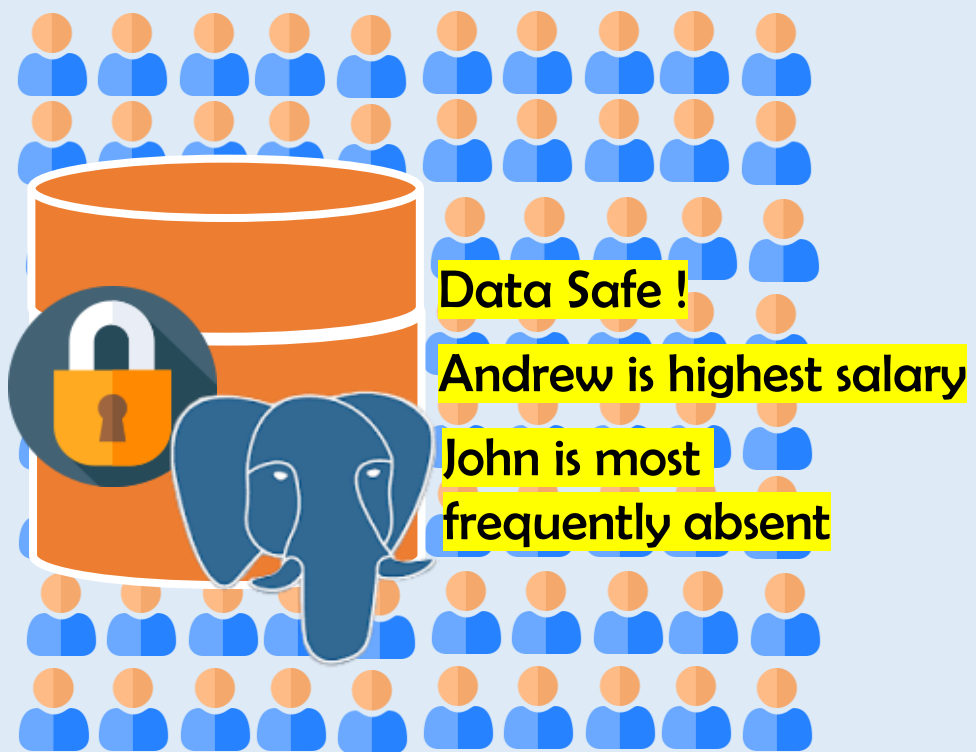

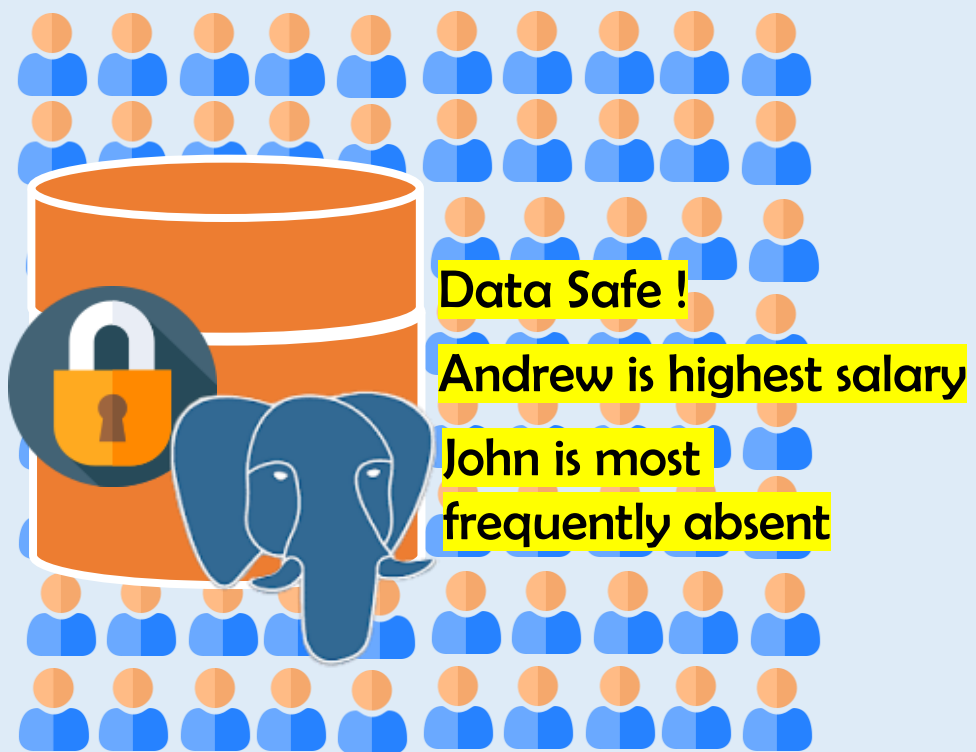

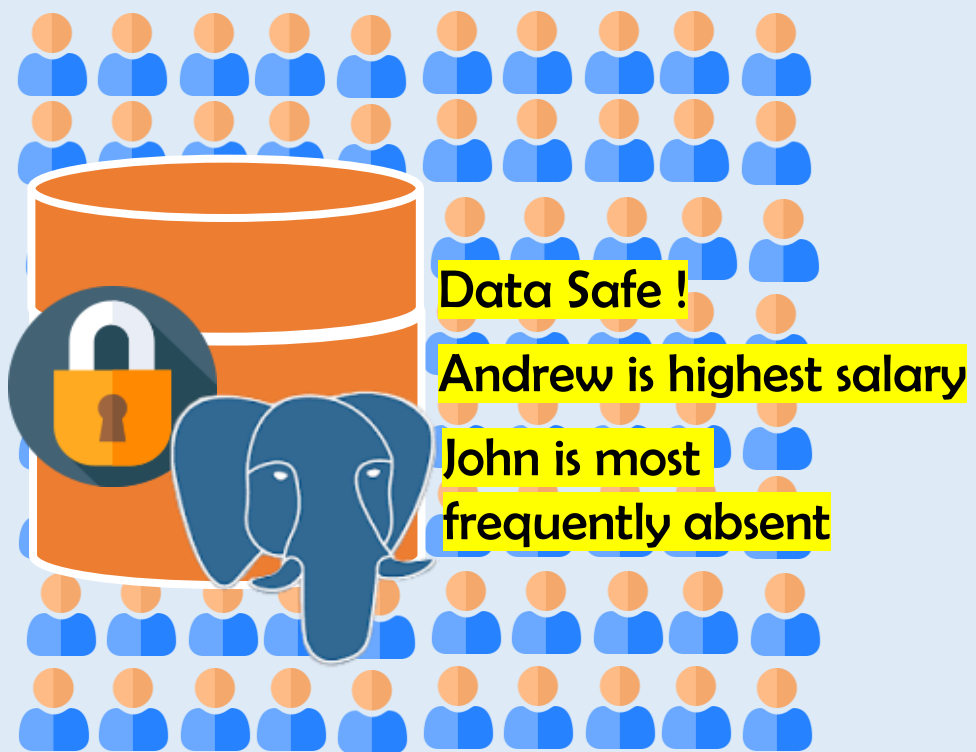

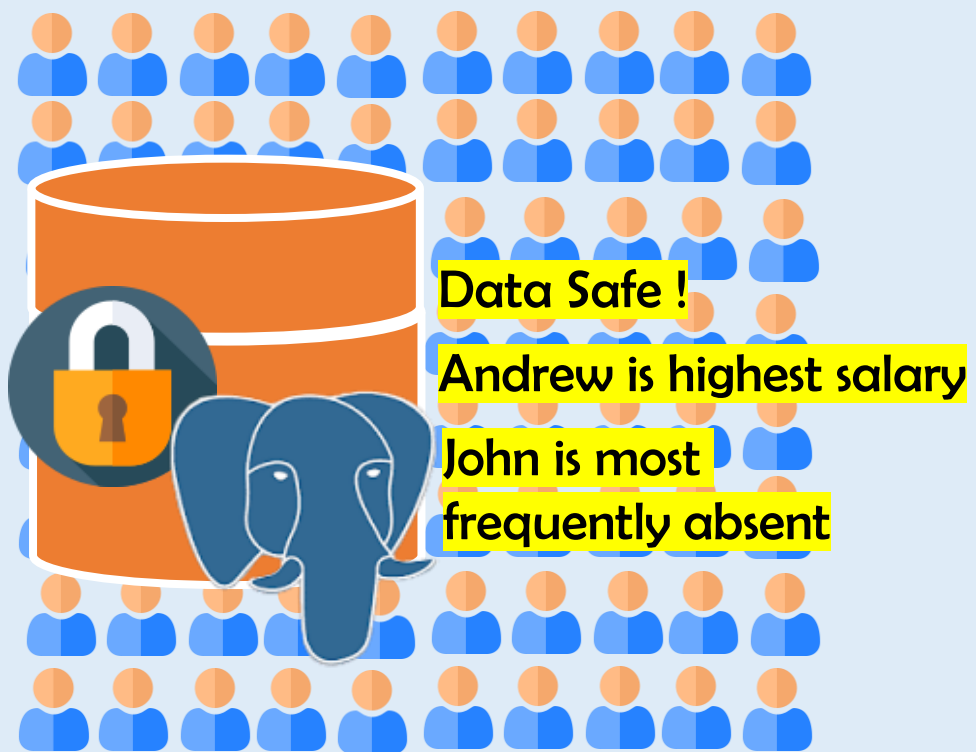

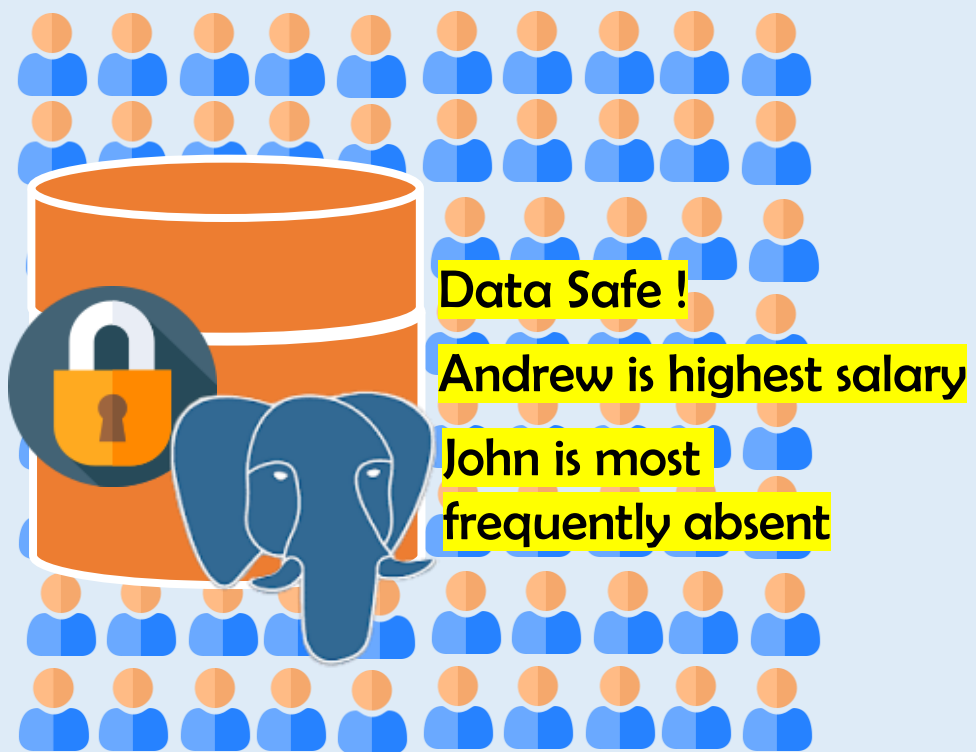

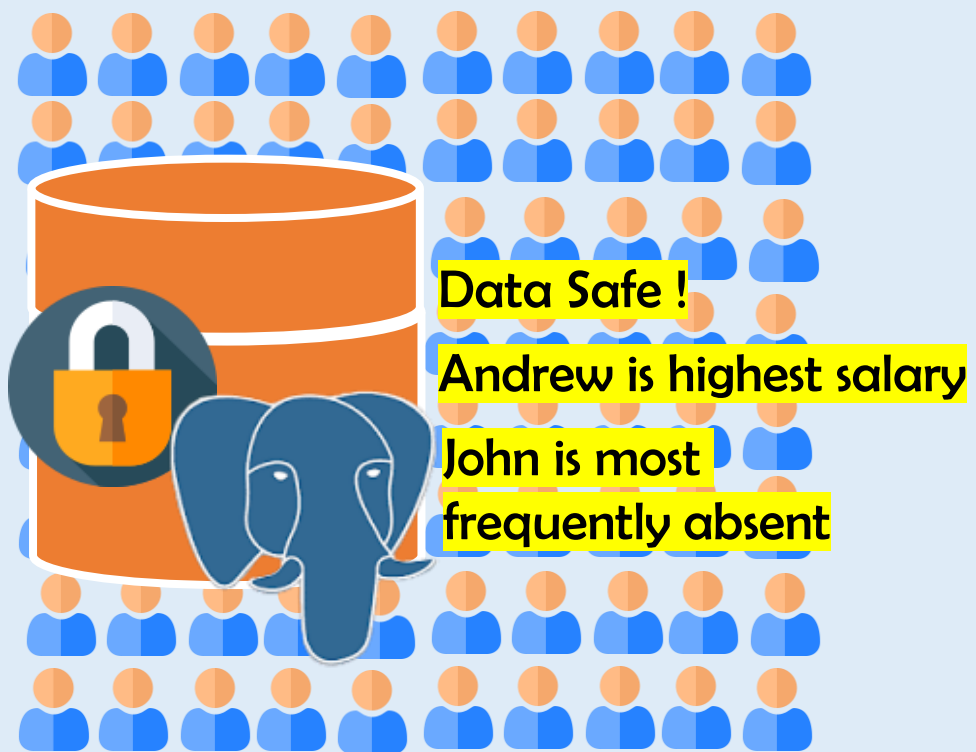

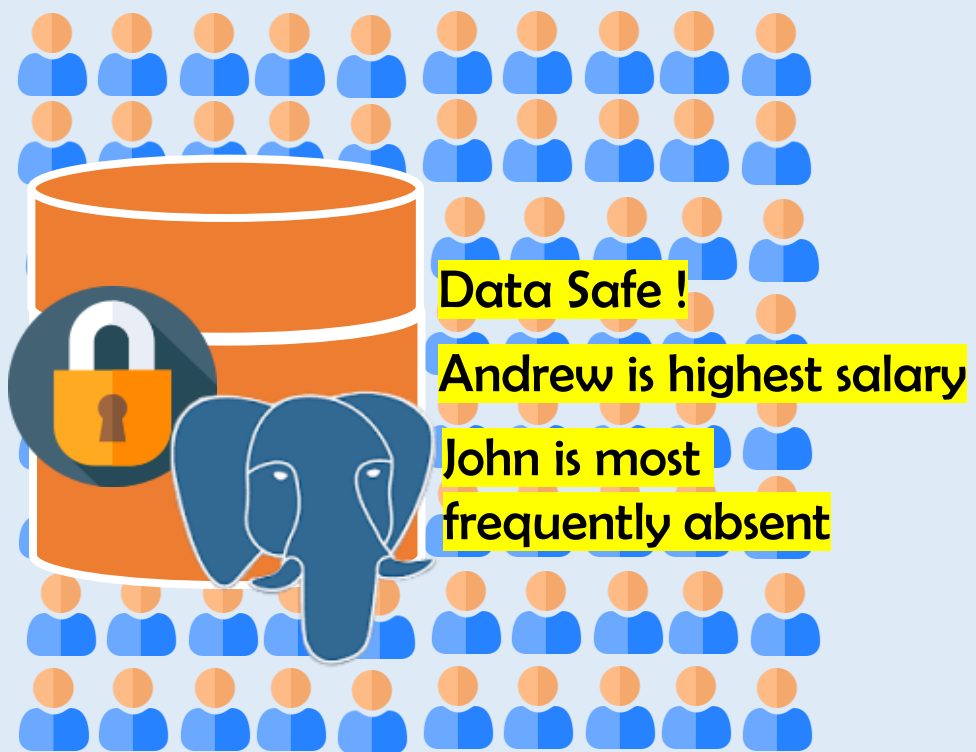

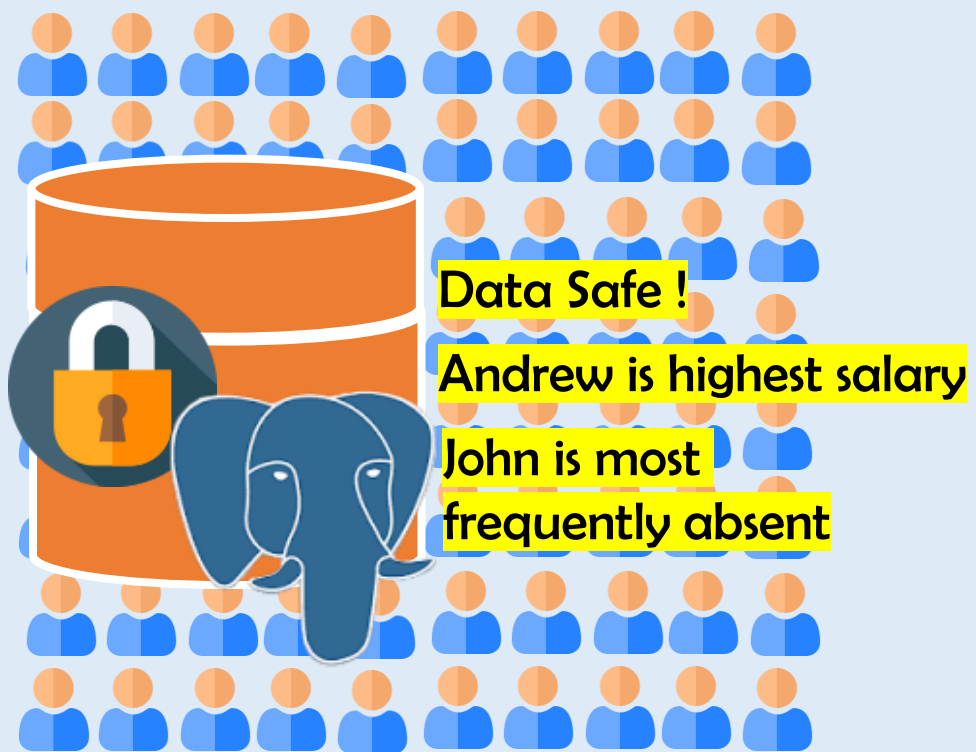

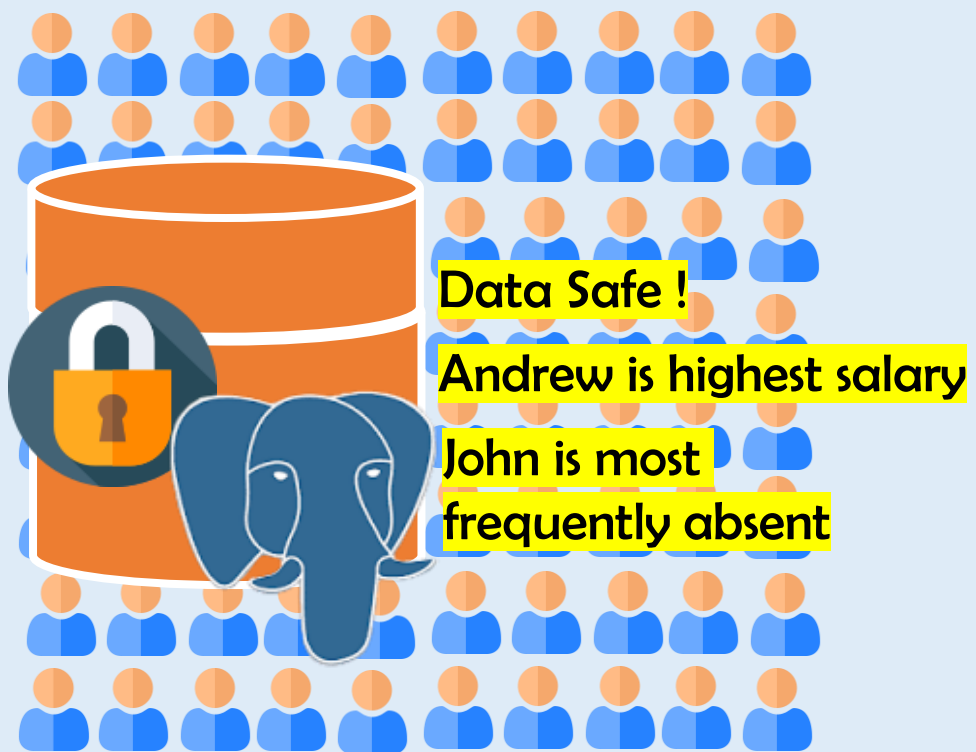

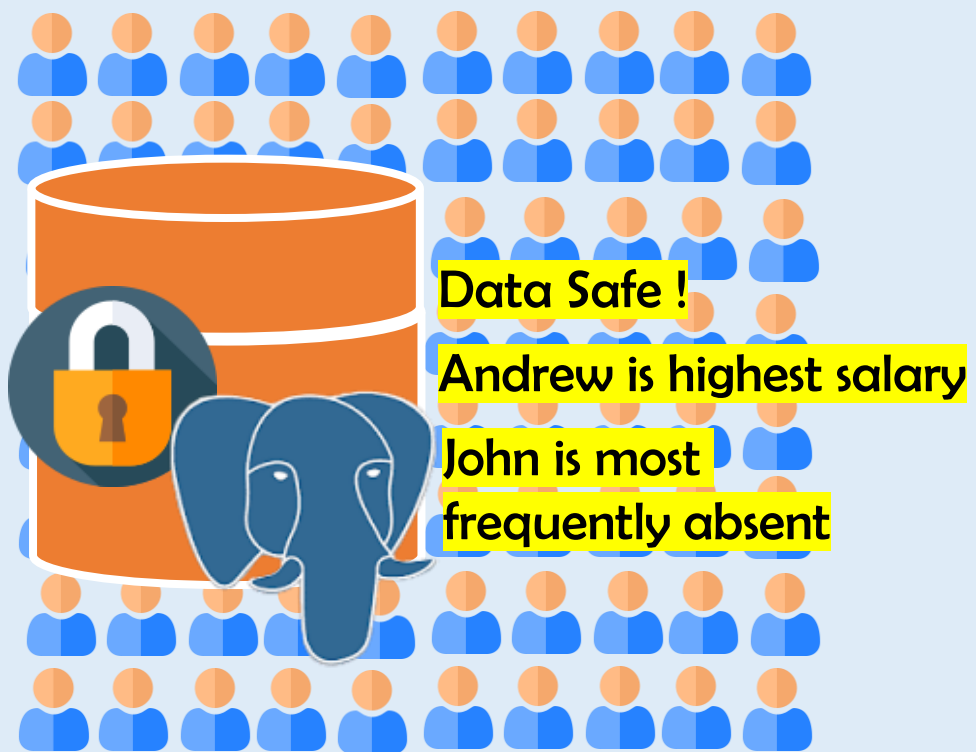

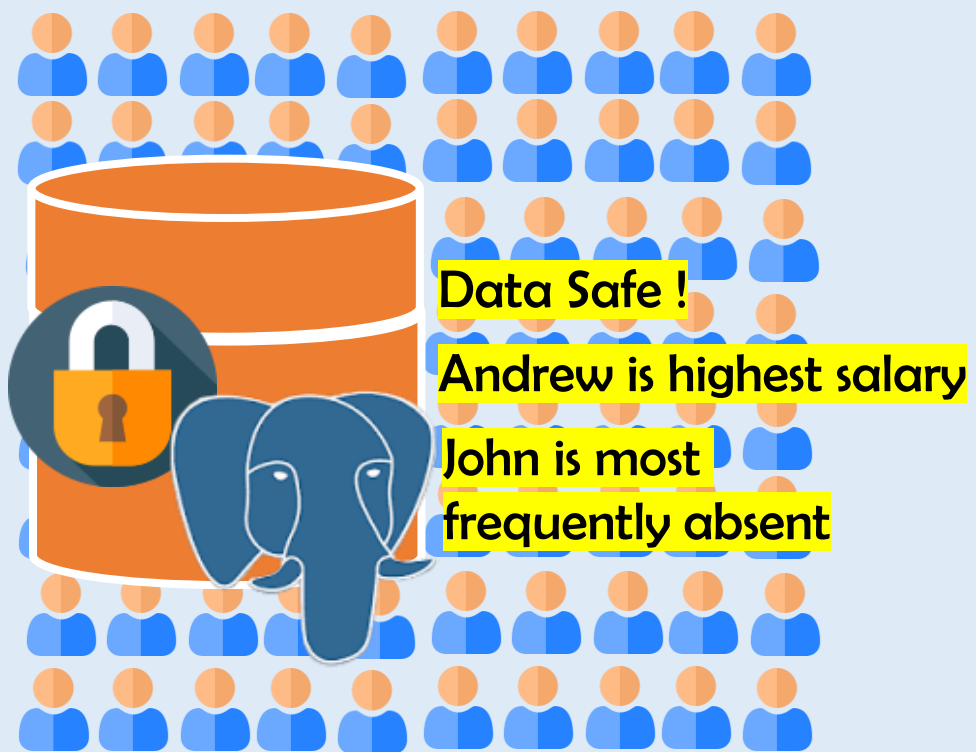

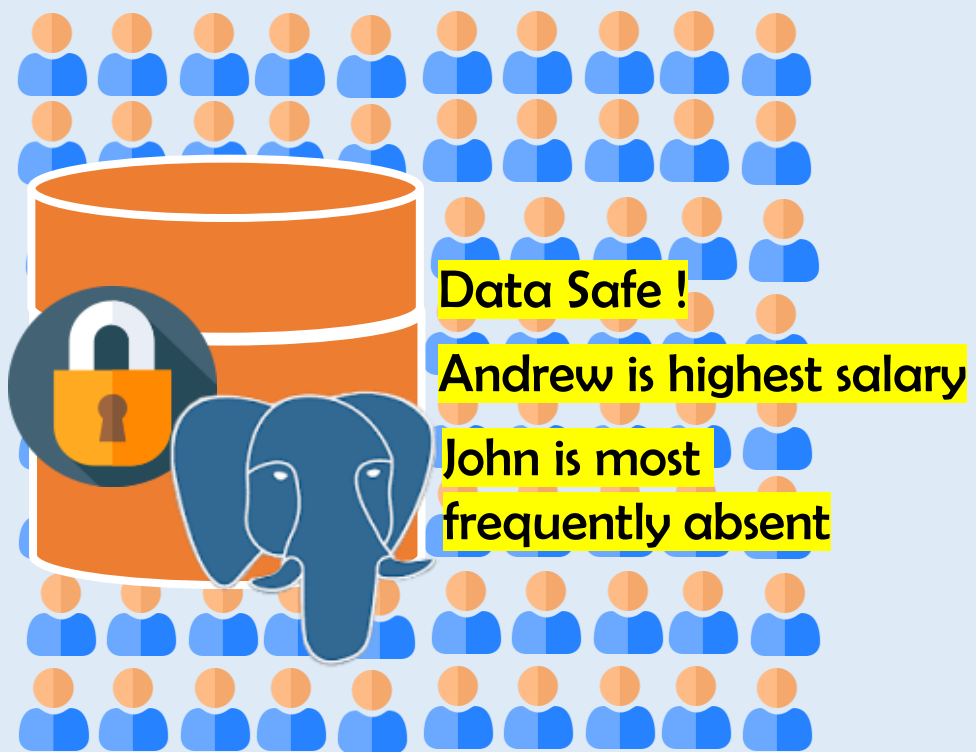

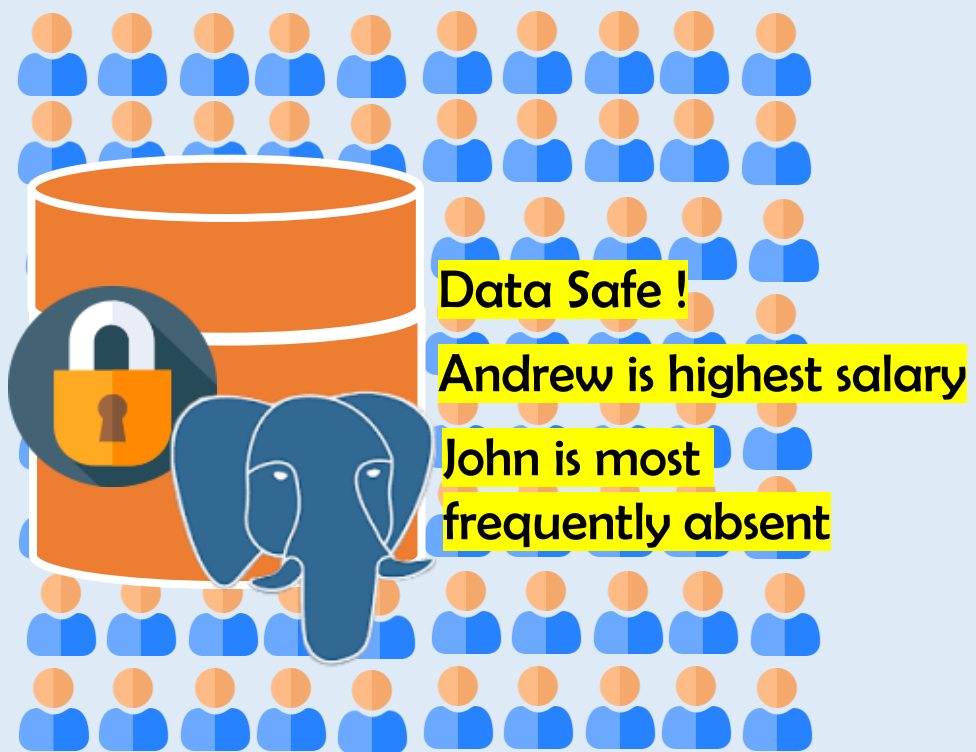

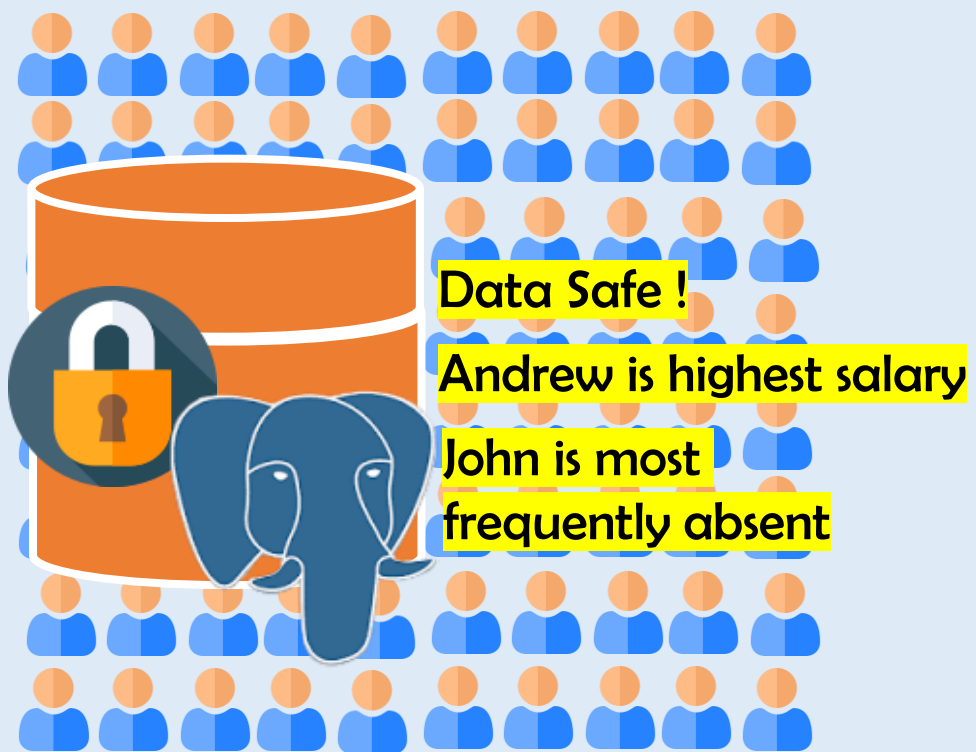

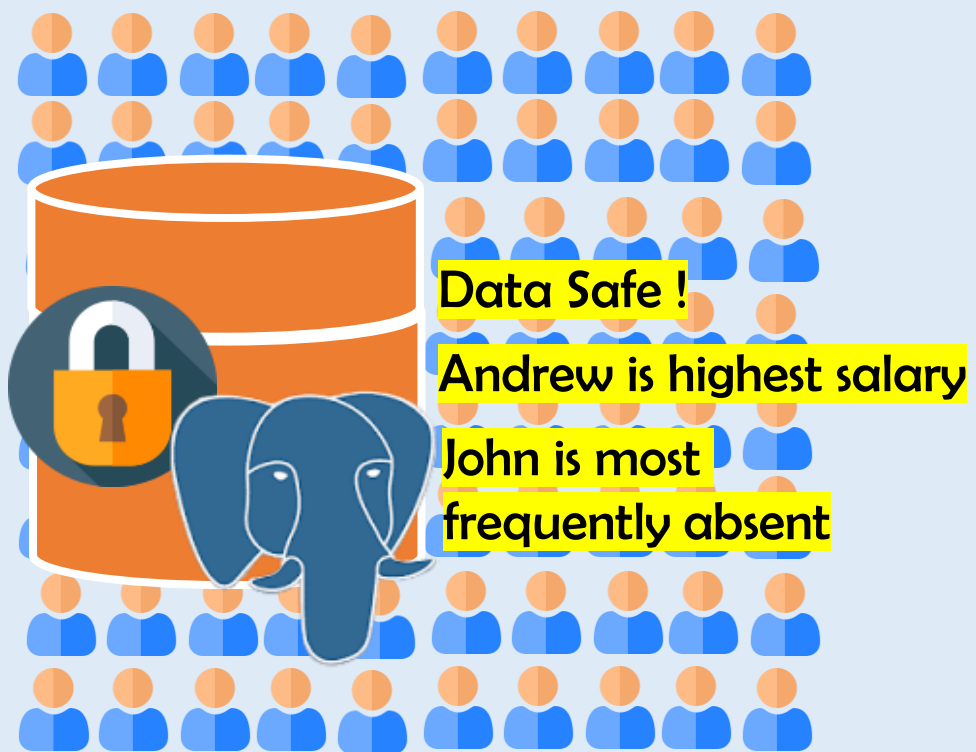

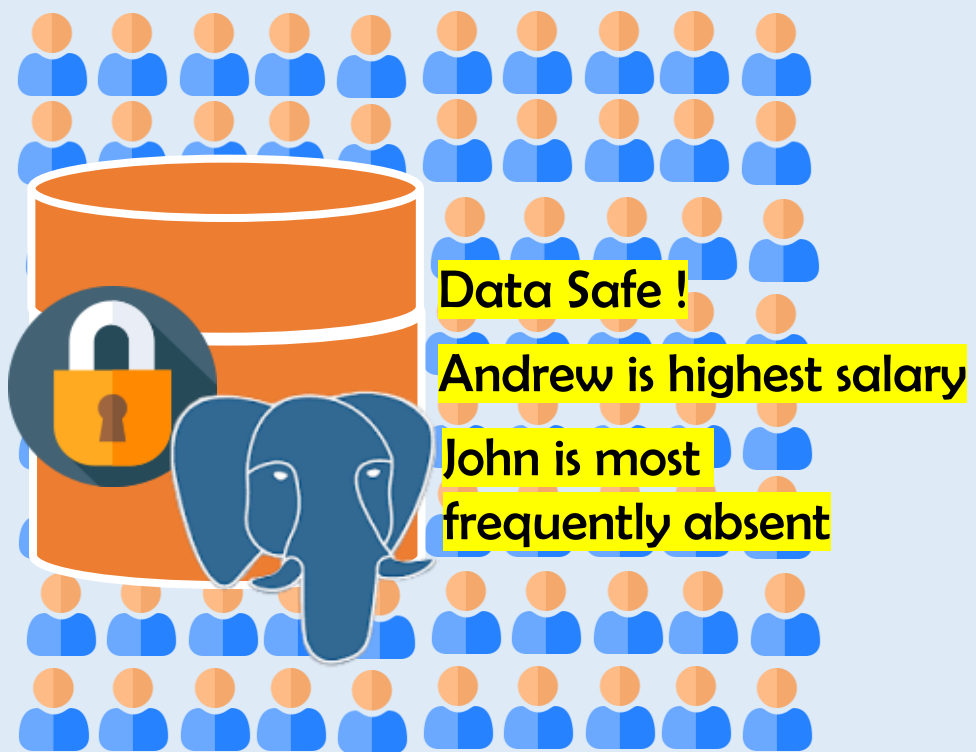

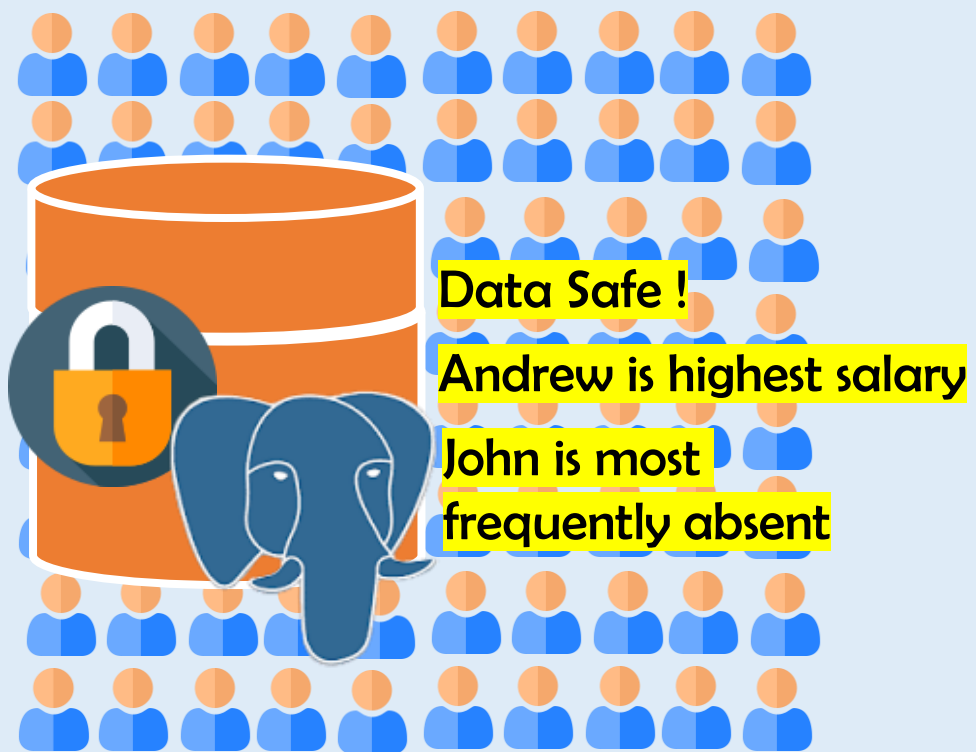

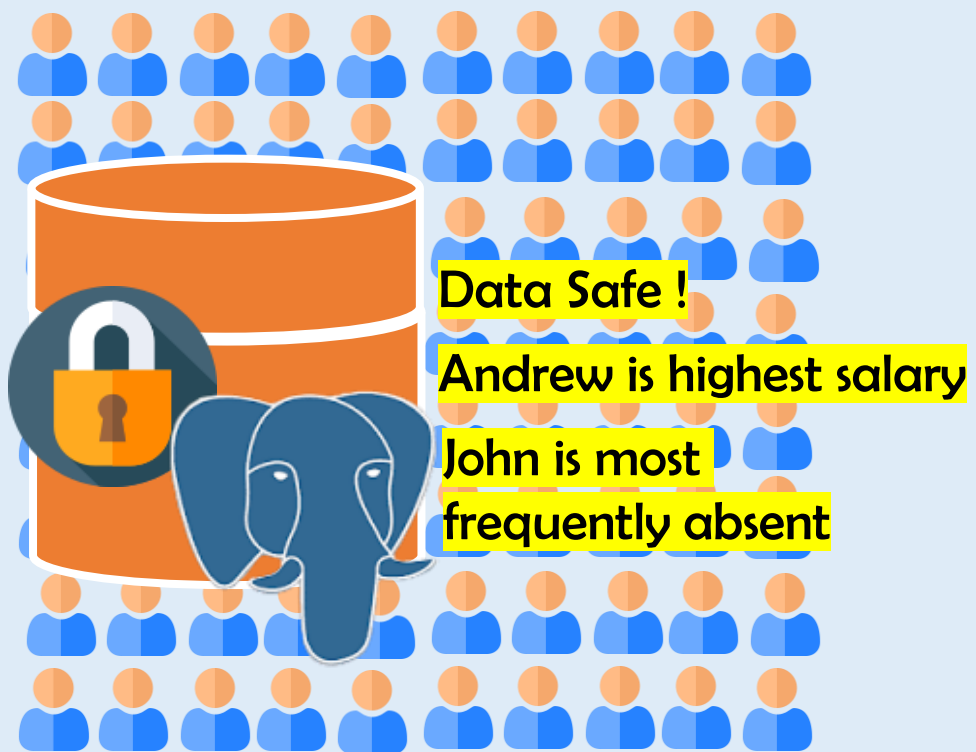

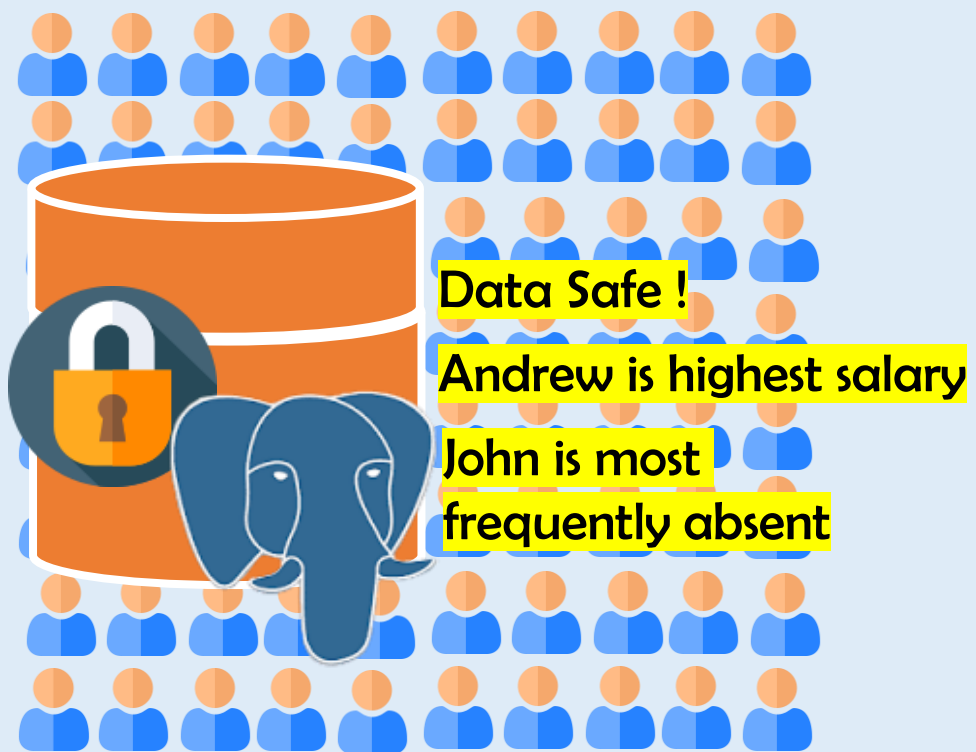

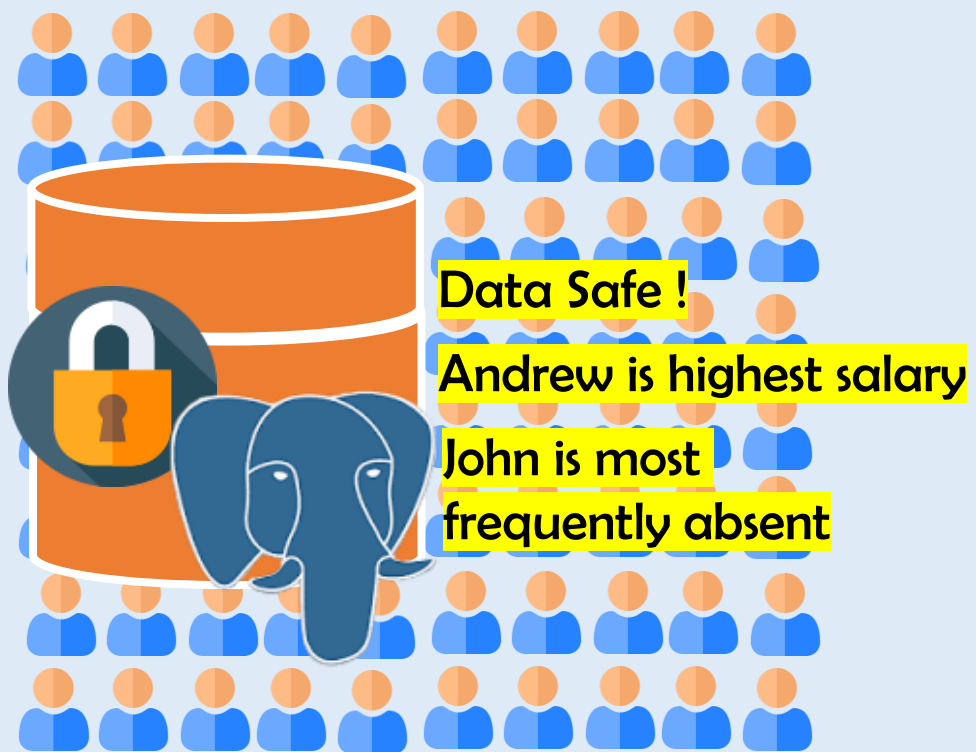

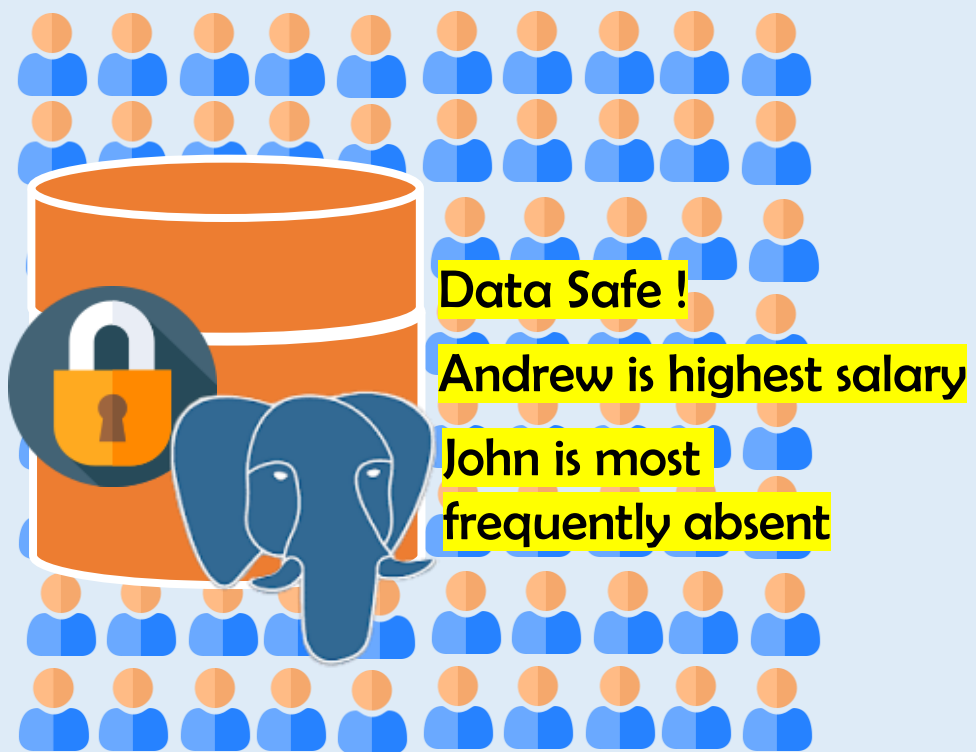

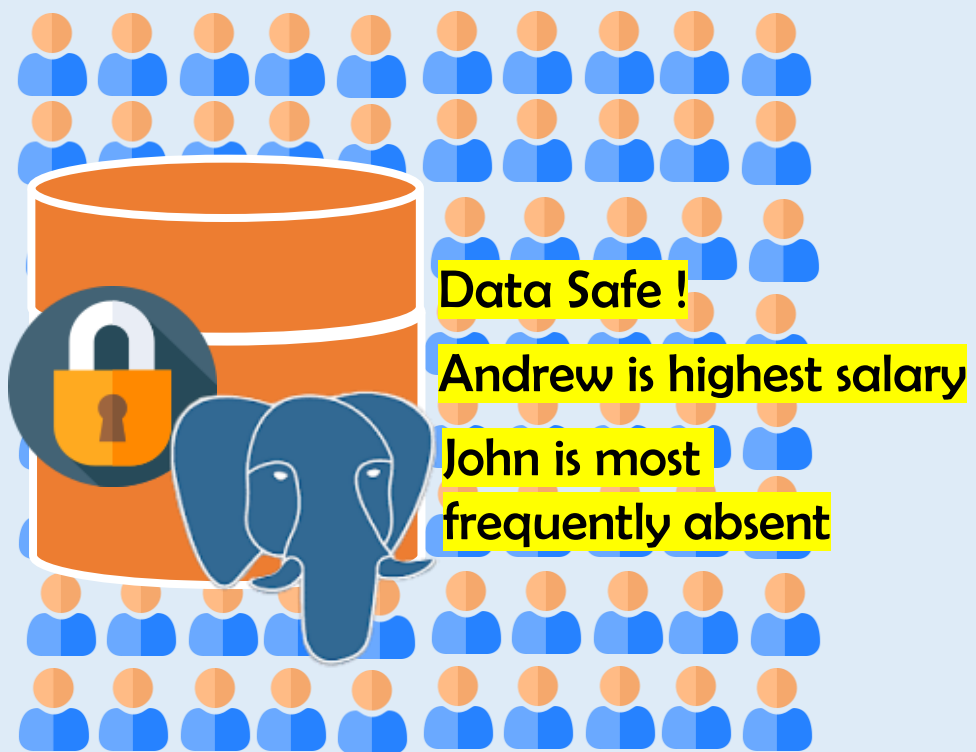

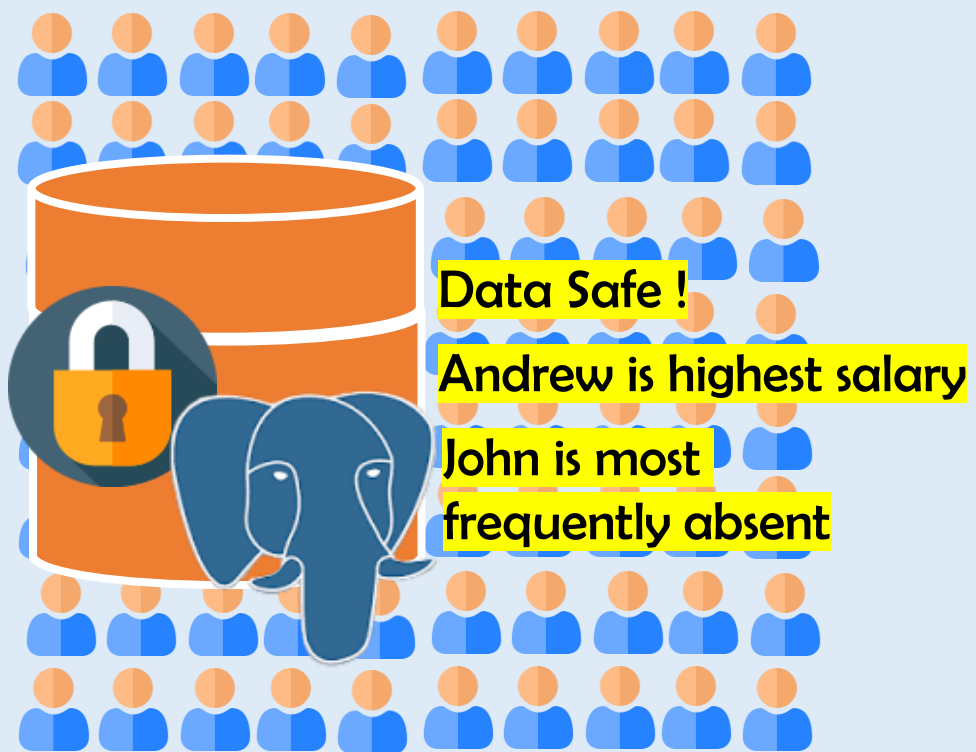

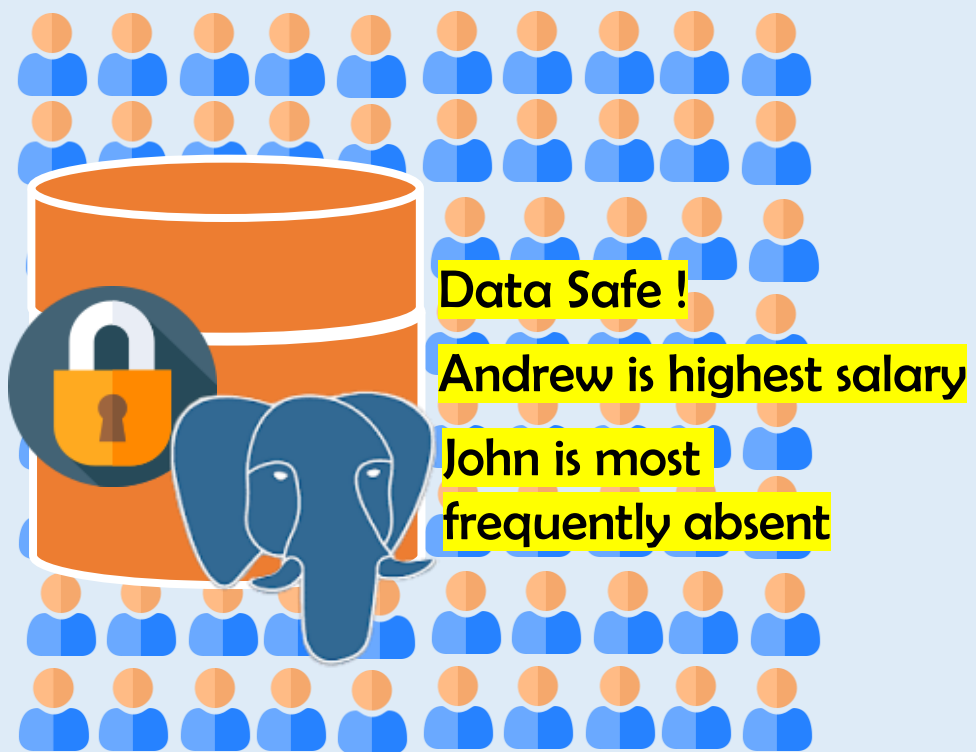

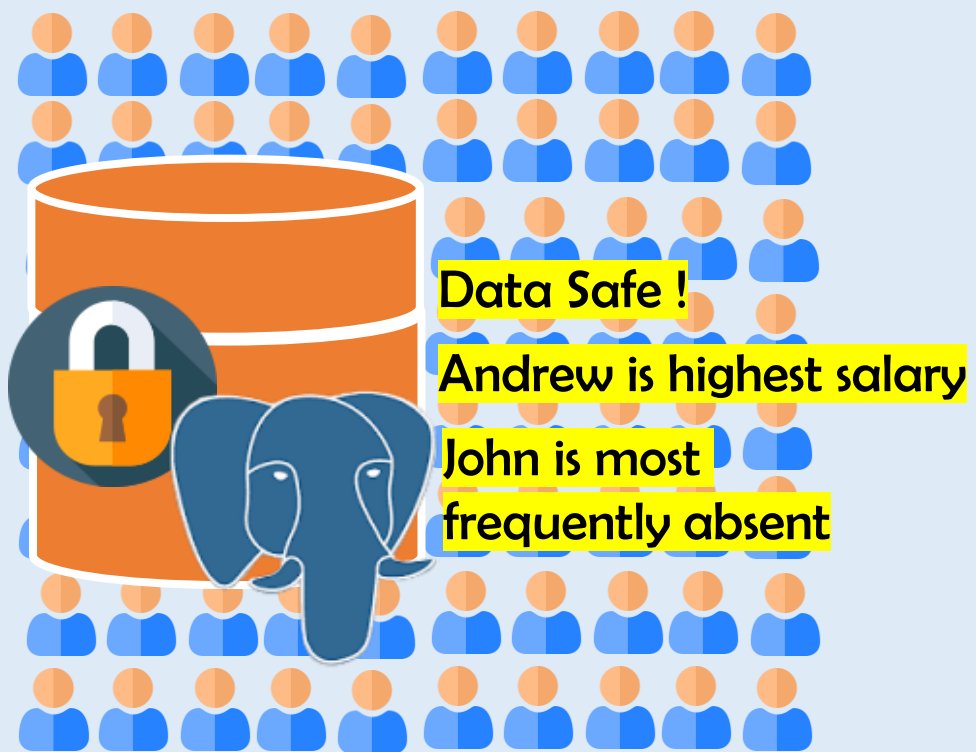

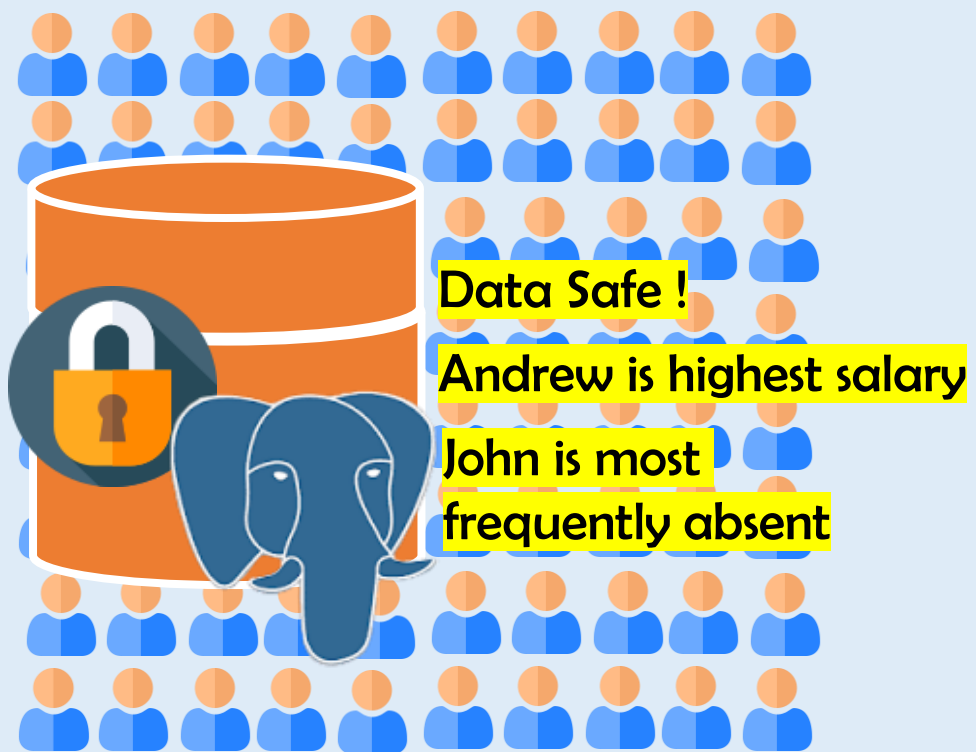

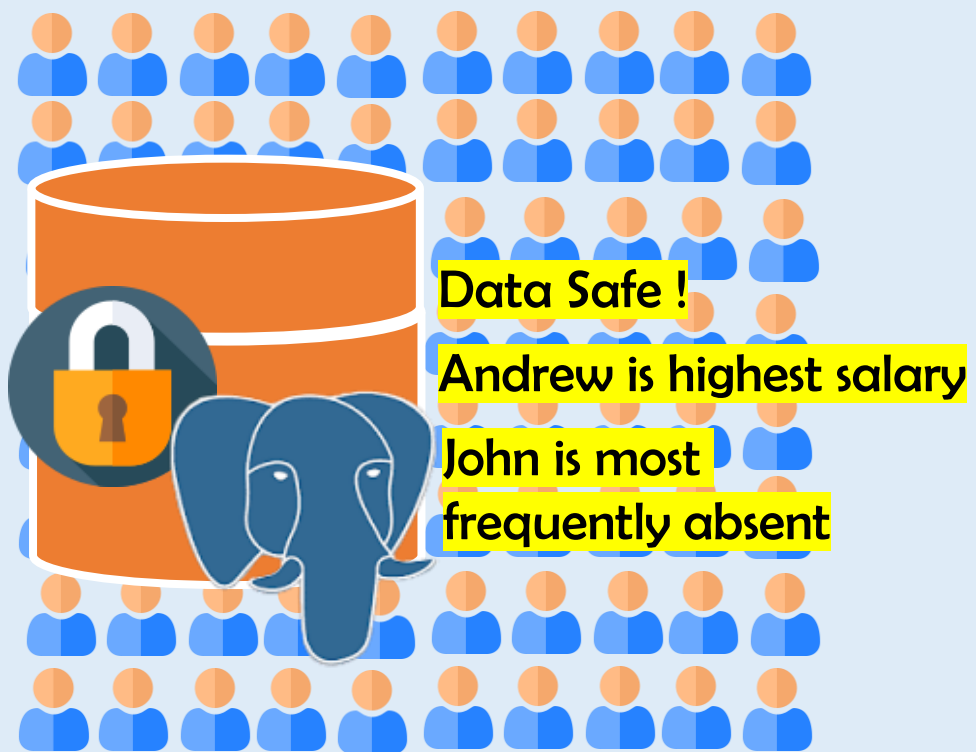

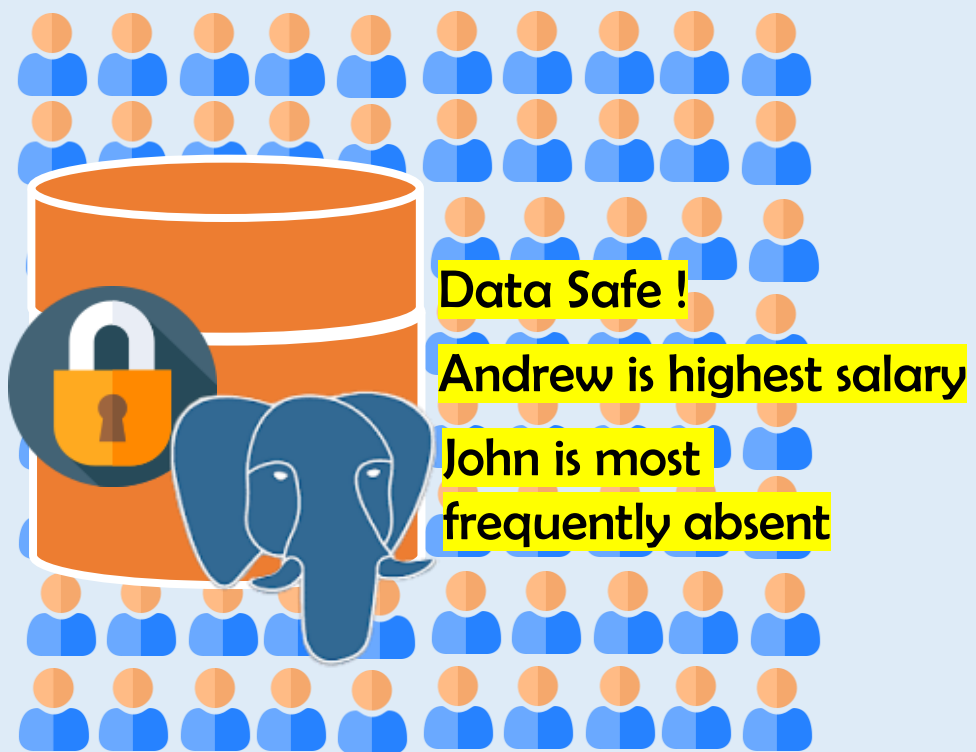

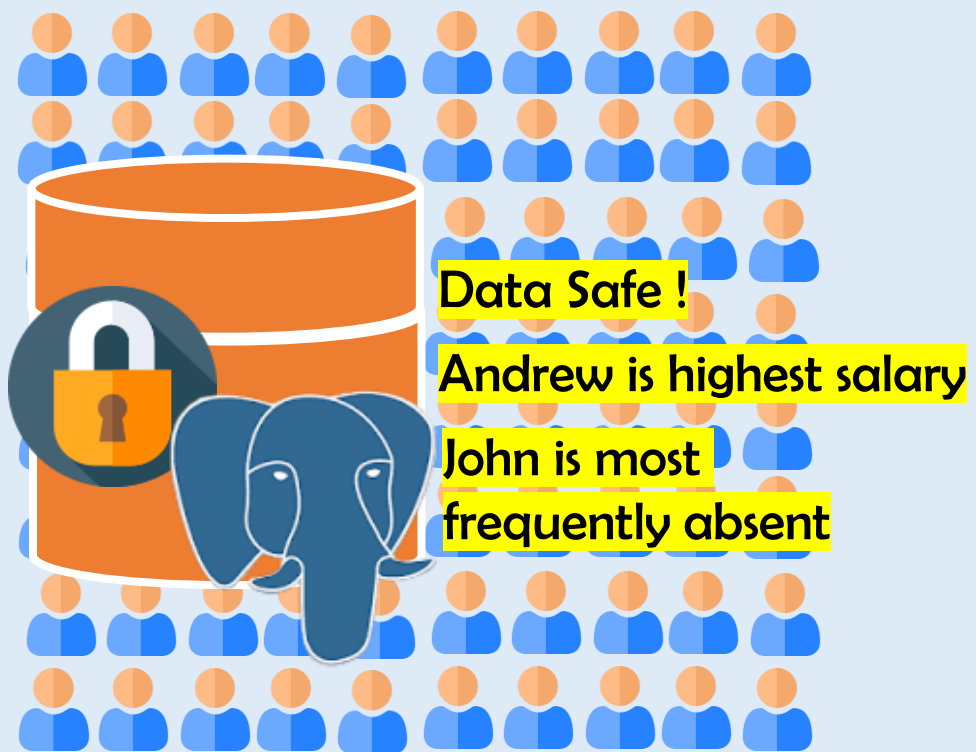

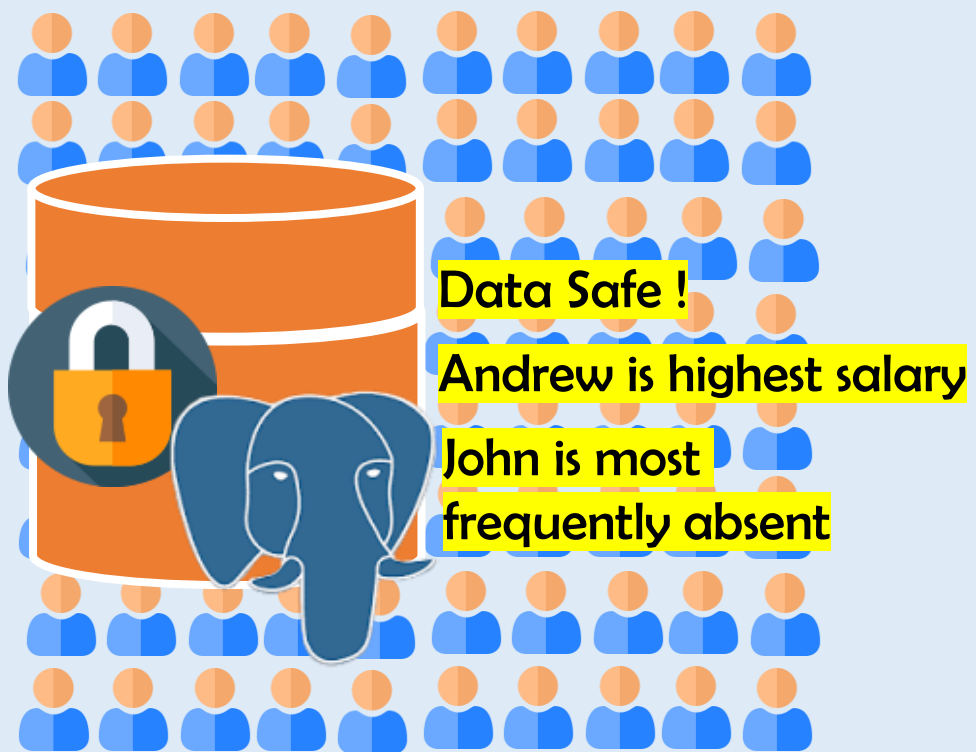

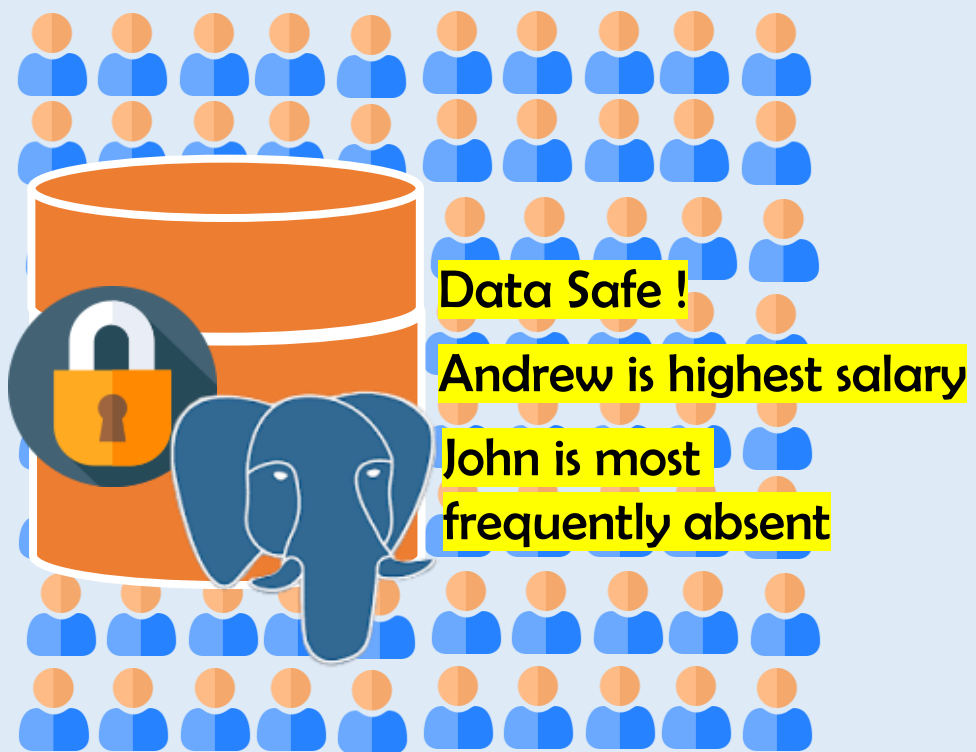

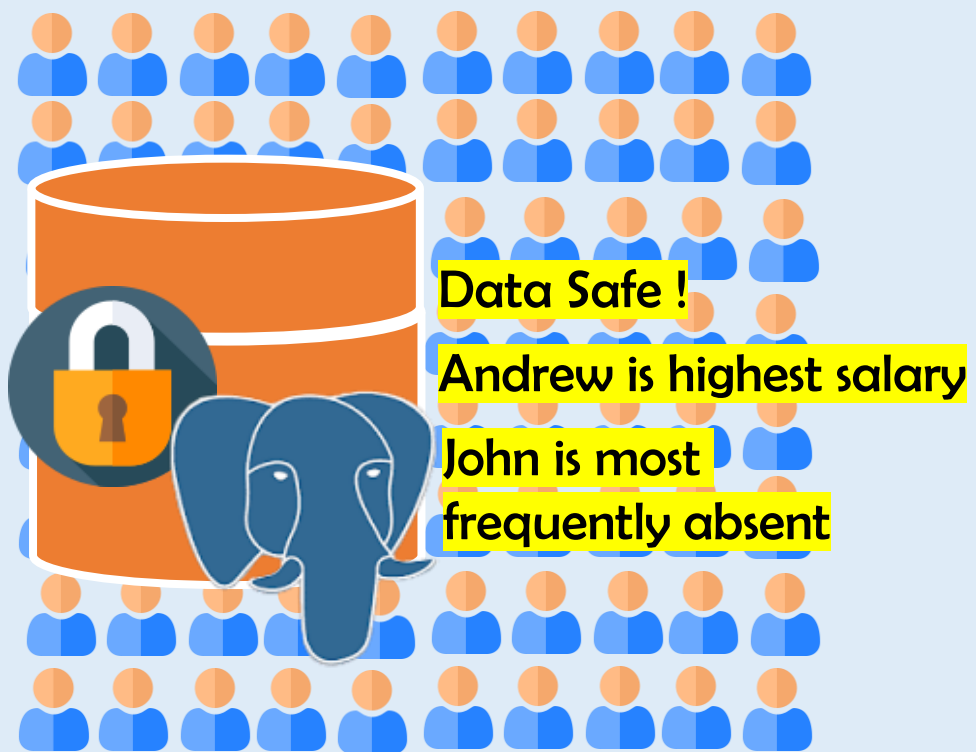

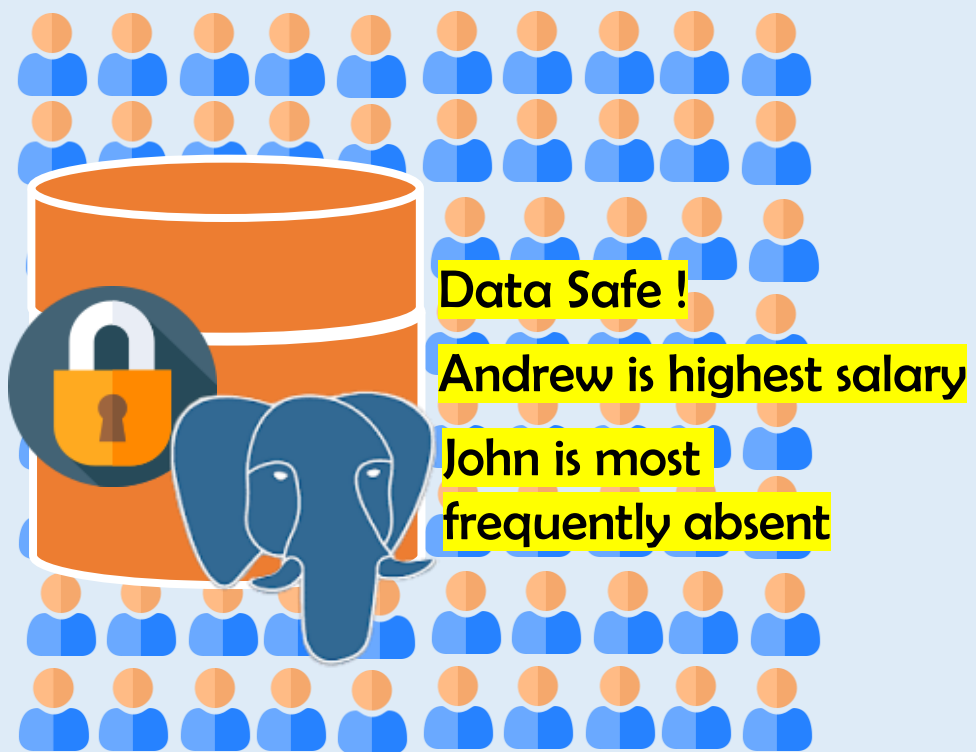

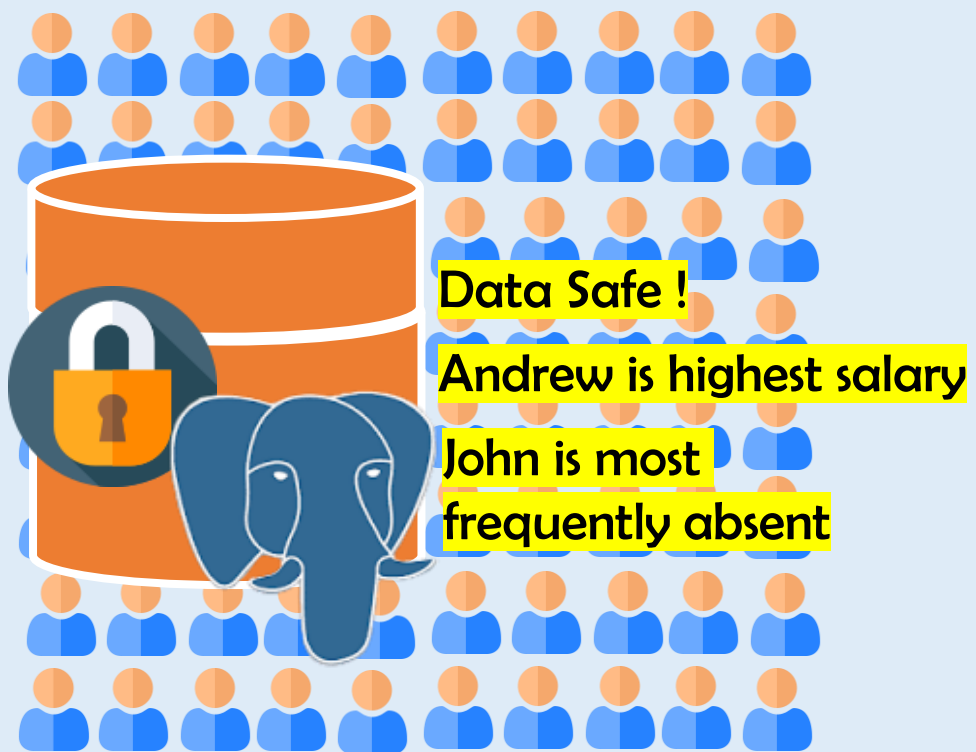

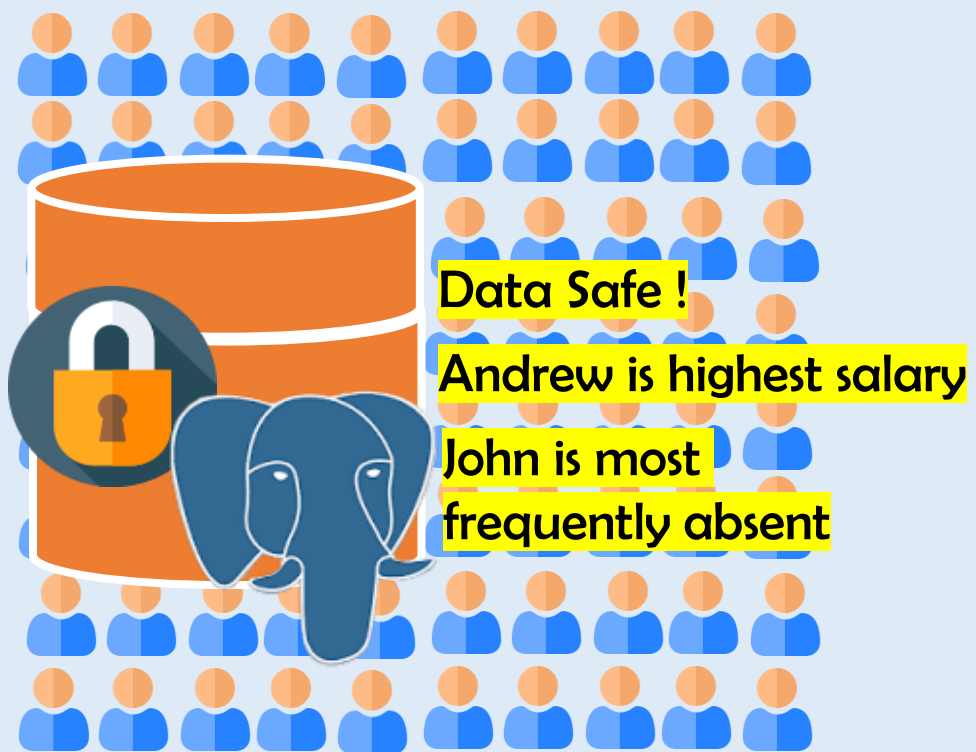

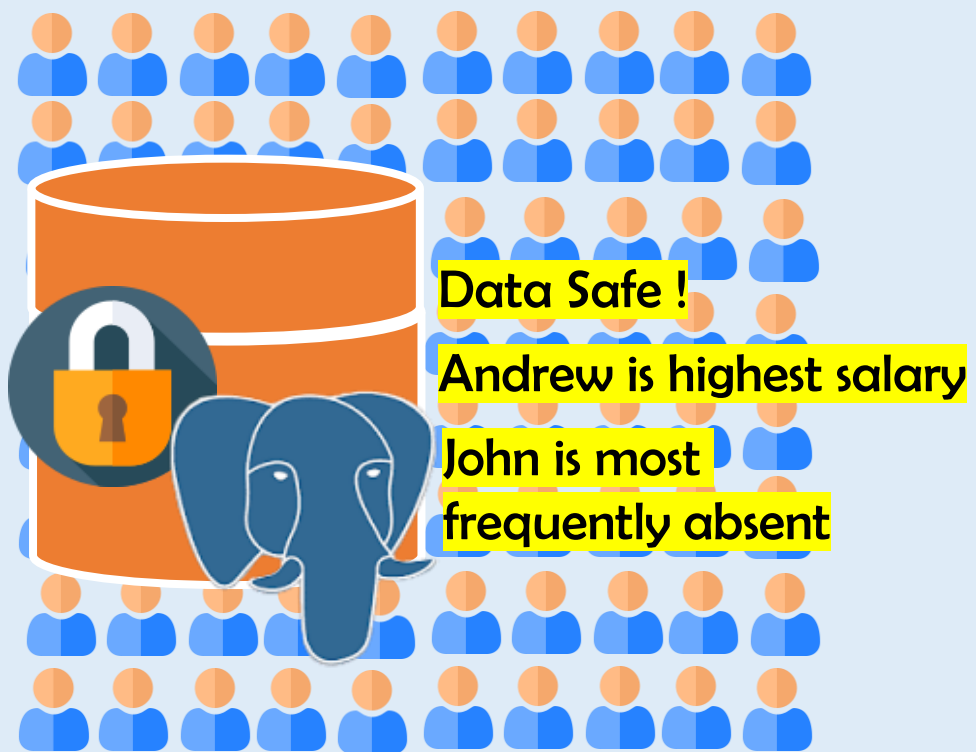

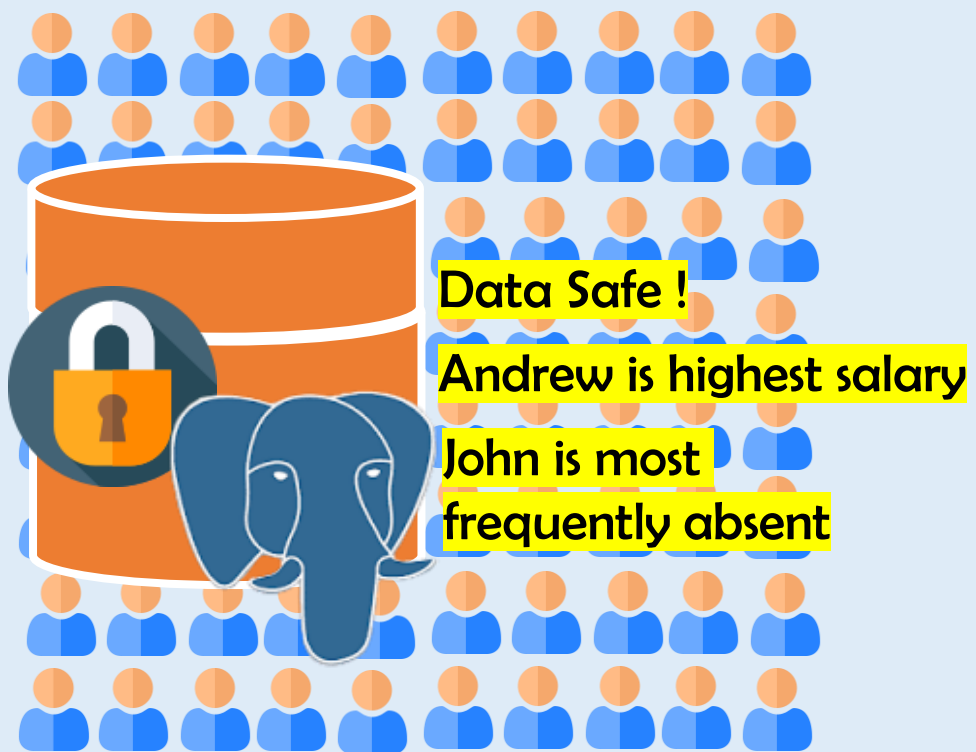

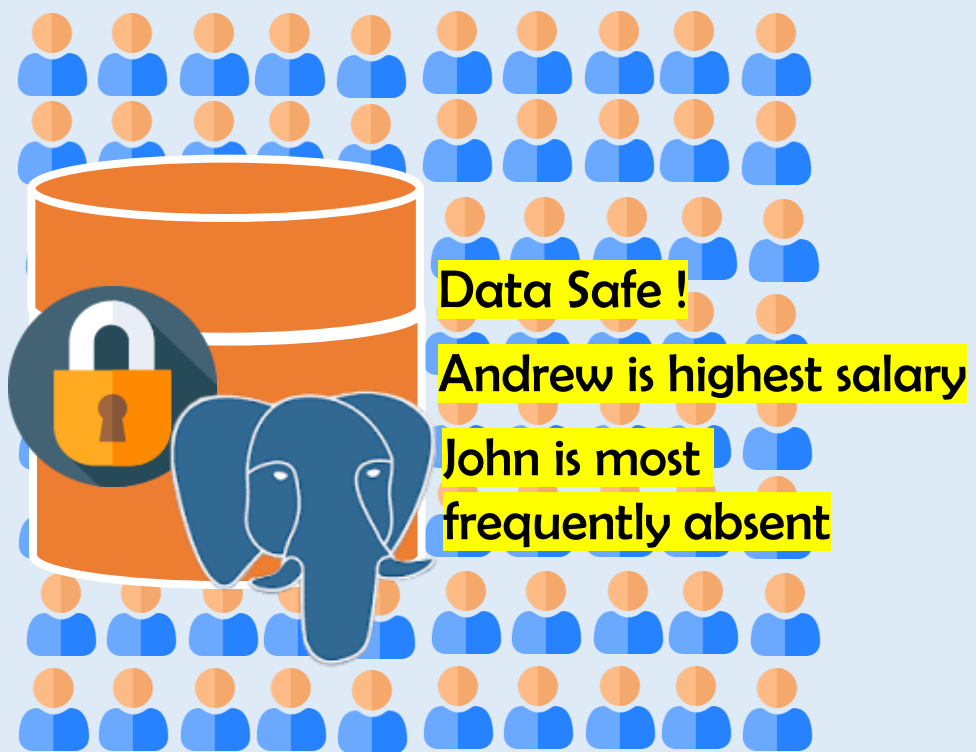

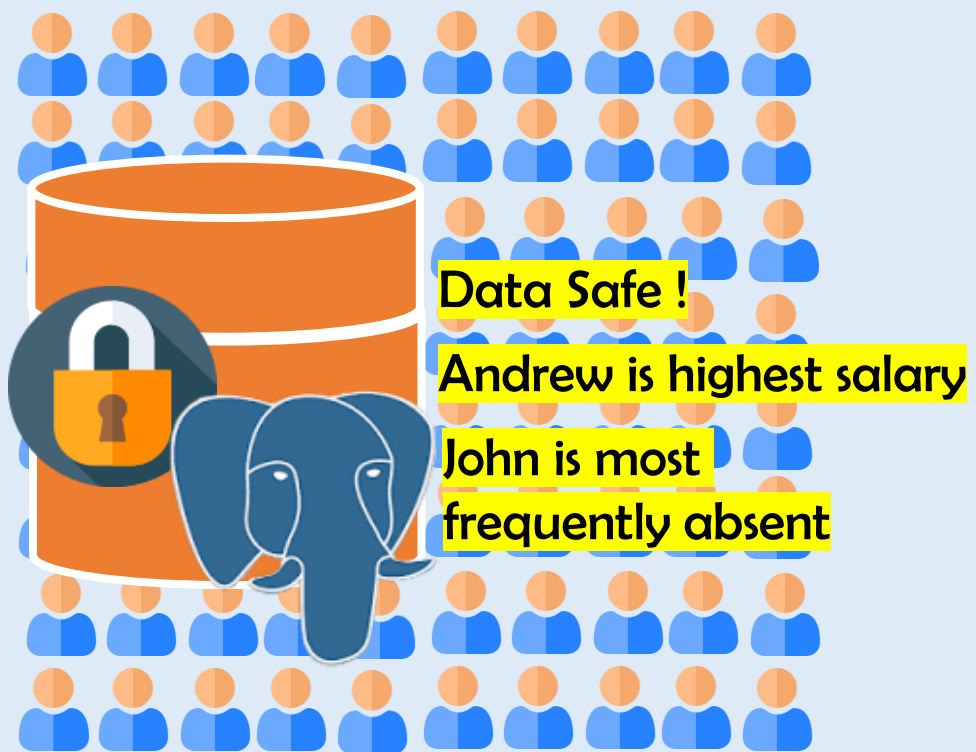

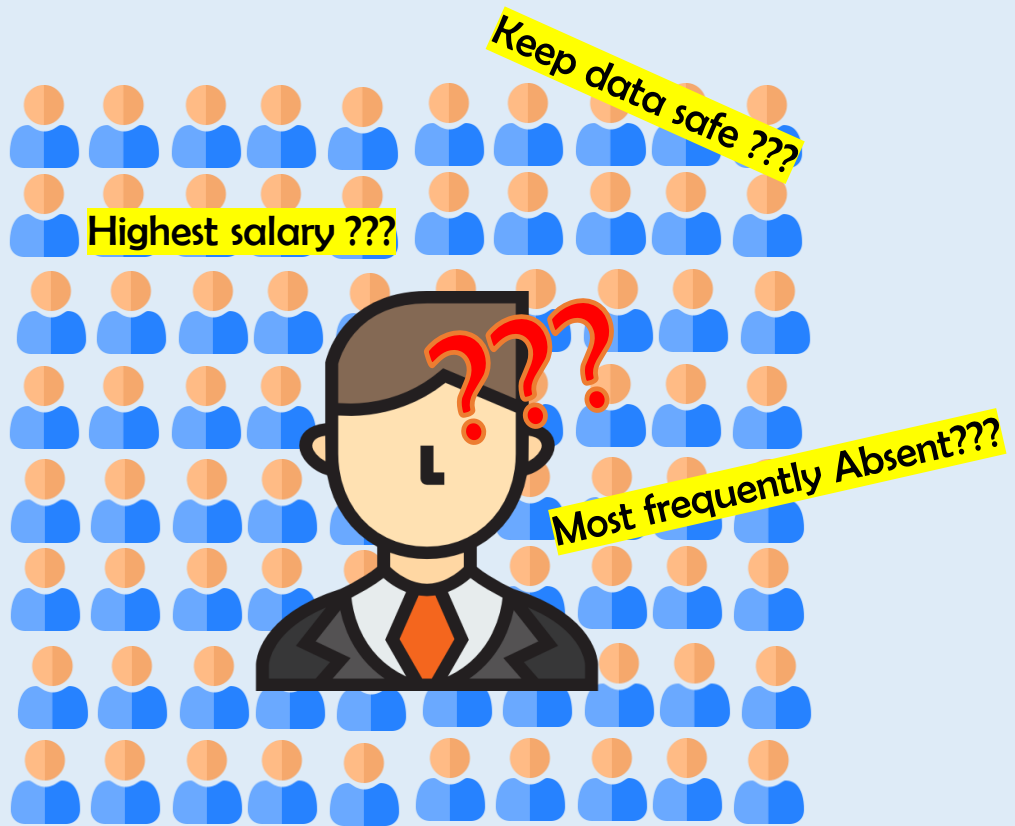

Name : Josse Surya Pinem

Age : 25 Years

Gender : Male

Occupation : Software Engineer

Nationality : Indonesian

Syntax PostgreSQL :

```
CREATE TABLE Employee (  
  Id INT AUTO_INCREMENT  
  PRIMARY KEY,  
  Name Varchar(255),  
  Position Varchar(255),  
  Salary INT,  
  Absent INT  
)
```

```
INSERT INTO Employee  
(Name, Position, Salary, Absent)  
Values  
("John Doe", "Software Engineer",  
1.400, 0)
```

```
SELECT * FROM Employee
```

```
UPDATE
```

```
Employee
```

```
SET Position = "SPV Software Engineer"
```

```
Where Name = "John Doe"
```

```
DELETE FROM Employee
```

```
WHERE Name = "John Doe"
```

What is Prisma ?

Prisma is Object-Relational Mapper (ORM) for Node.js and Typescript that simplifies database interactions

Syntax Model Prisma :

```
model Employee (  
  Id      INT    @id @default(autoincrement())  
  name    String  
  position String  
  salary  INT  
  absent  INT  
)
```

Syntax CRUD Prisma :

Create

```
await prisma.employee.create({  
  data : {  
    name : "John Doe",  
    position : "Software Engineer" ,  
    salary : 1.400,  
    absent : 0  
  }  
});
```

Read

```
await prisma.employee.findMany({})
```

Update

```
await prisma.employee.update({  
  where: { name: "John Doe" }  
  data: {  
    position: "Spv Software Engineer"  
  }  
})
```

Delete

```
await prisma.employee.delete({  
  where : { name : "John Doe" }  
})
```

Pagination

Pagination is a method of breaking up very long content or data into smaller, sequential pages, usually marked with numbers (1, 2, 3...) or "Next/Previous" buttons.

Syntax :

```
await prisma.employee.findMany({1})
```

skip: 10

take: 10

```
await prisma.employee.findMany({})
```

FRONT-END

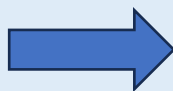

BACK-END

```
await prisma.employee.findMany({})
```

skip: 10

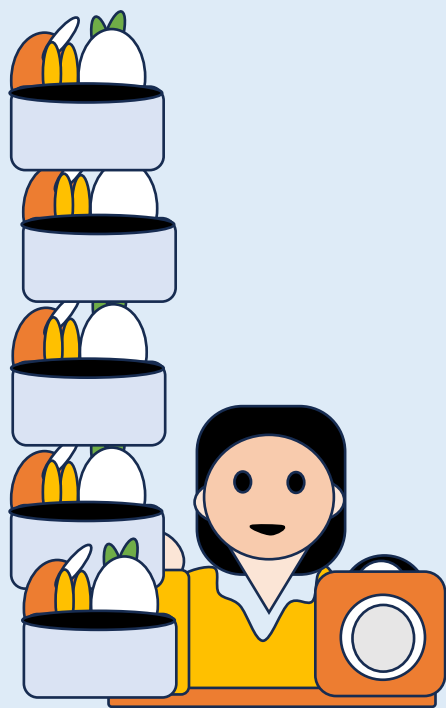

take: 10

FRONT-END

BACK-END

FRONT-END

BACK-END

FRONT-END

BACK-END

Authentication & Authorization

Authentication is the process of verifying who you are

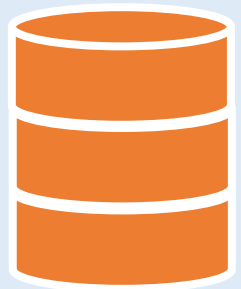

Authorization is the process of determining who you are allowed to access

Authentication (who are you ?)

Name : "Josse",
Email: "..",
Img:"..",

FRONT-END

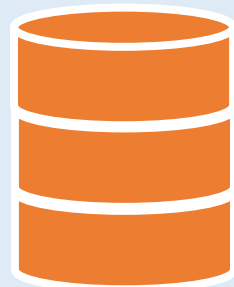

BACK-END

Authorization (is User Allowed ?)

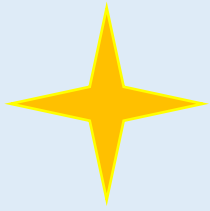

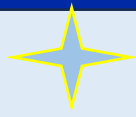

He is Allowed !

FRONT-END

BACK-END

THANK YOU !
